April 2002

Dear Reader:

In “The Future of Public Health” in 1988, the Institute of Medicine determined that public health’s “core functions” – its basic tasks – were assessment, policy development and assurance. Then a working group of a broad array of public health officials in 1994 expanded the concept of “core functions” to the “essential services of public health.”

“Assessment” was first among the core functions; and “monitor health status to identify and solve community health problems” was first among essential functions.

That brings us to this 2000 edition of Vital Statistics, which represents a basic function of the Iowa Department of Public Health: assessment, or monitoring health status. The data show trends that indicate the population’s increasing good health, and trends that indicate potential problems.

In the first category is the continuing decline in the death rate for heart disease, the state’s – and the nation’s – number-one killer. The rate has decreased steadily, from 319.1 per 100,000 persons in 1997 to 290.3 in 2000. Also declining from last year are rates of death from cancer, cerebrovascular disease, unintentional injuries and chronic lower respiratory diseases.

Among worrisome trends are the teen suicide rate, which rose only slightly from last year but which has stubbornly remained stable since the early 1990s. The out-of-wedlock live birth rate continued to climb, and the neonatal death rate is up from last year, although it’s still well below the 1990 rate.

Data like these help us, and our partners around the state, complete the second part of that essential service identified by the public health working group: “to solve community health problems.” Thanks to the IDPH staff, and all our partners, that work is proceeding vigorously.

Dr. Stephen Gleason
Director

Trends in 2000 Vital Statistics

This year's publication reflects a continuing effort to report trends, rather than mere raw data. That effort will continue next year and in subsequent reports with the goal of making the data more useful and user friendly.

Examples of trends in this report are in Tables 1 through 3, 10, 11, 13, 14, 24, 30, 31, and 35. Table 13, for instance, shows trends for selected cardiovascular disease deaths as a percent of total deaths in the last ten years.

Trends are also plotted on Figures/Charts 1 through 29. For example, Figure 1 shows trends in live births and deaths in the last 10 years and Figure 2 shows trends in marriages and dissolutions in the last 10 years.

Many trends show improving health in Iowa. At the same time, there are some areas of concern that need to be monitored closely.

Additional trends in Iowa health indicators are available in the *Iowa Health Fact Book* as well as in the web-based Iowa Health Indicators Tracking System (IHITS). The *Iowa Health Fact Book* is a joint publication of the Iowa Department of Public Health (IDPH) and the College of Public Health at the University of Iowa. Links to this document can be found on-line at www.idph.state.ia.us or at the University of Iowa College of Public Health site, www.public-health.uiowa.edu/factbook. The Iowa Health Indicators Tracking System can be accessed through the IDPH web site.

42.	Deaths Ranked by County, 2000.....	118
43.	Suicide Deaths Ranked by County, 2000.....	119
44.	Unintentional Injury Deaths Ranked by County, 2000.....	120

TECHNICAL NOTES

DEFINITIONS:

Annulment: A court decree voiding a marriage from the beginning. Annulments are included with divorces for rate calculation purposes and are available only by place of occurrence.

Cause of Death: Deaths, by cause, are classified according to the *International Classification of Diseases, Ninth Revision*, adapted for use in the United States. It is the disease or injury that initiated the sequence of morbid events leading directly to death, or the circumstances of the accident or violence which produced the fatal injury. The responsibility for indicating the underlying cause of death is that of the certifying physician or medical examiner.

Congenital Malformation: Deformity existing before birth.

Divorce: A court decree dissolving a marital relationship. Divorces are included with annulments for rate calculation purposes and are available only by place of occurrence.

Fetal Death: A birth that fails to show any sign of life after delivery. Reportable fetal deaths in Iowa are those greater than 20 weeks gestation. The responsibility for determining if a birth meets this definition is that of the attending physician. "Fetal death" and "stillbirth" are synonymous terms.

Infant Death: Death of a live-born infant under one year of age. Includes both neonatal and postneonatal deaths.

Live Birth: A birth that shows any sign of life after delivery. The World Health Organization considers a sign of life as being the breathing or showing of any other evidence of life, such as beating of the heart, pulsation of the umbilical cord, or definite movement of voluntary muscles, whether or not the umbilical cord has been cut or the placenta is attached. The responsibility for determining if a birth meets this definition is that of the attending physician. In this publication, the terms live birth and birth are used synonymously.

Live Birth Order: An expression of the numeric relationship of a child to others liveborn to that mother.

Low Birth Weight: A weight at birth of under 2,500 grams or 5 pounds, 8 ounces.

Marriage: The legal union of individuals. Marriages are available only by place of occurrence.

Maternal Death: A death due to complications of pregnancy, labor, delivery or puerperium.

Neonatal Death: Death of liveborn infant occurring within the first 27 days of life.

Occurrence Data: Data compiled by the geographical place the event occurred without regard to residence.

Other Race: Includes persons stating themselves as other than Black or the categories included in "White."

Perinatal Death: Death of a fetus of greater than 20 weeks gestation or death of a liveborn infant under 28 days of life.

Primary Marriage: Dissolution of a first marriage for both parties.

Postneonatal Death: Death of a live-born infant after the first 27 days of life, but before one year of age.

Resident Data: Data compiled by the usual place of residence without regard to the geographical place where the event occurred. For births, the mother's usual residence is used as the place of residence of the child.

White Race: Includes persons stating themselves as White, Cuban, Mexican, Puerto Rican, or other Hispanic. Also includes persons for whom race is not stated.

American Indian or Alaska Native: A person having origins in any of the original peoples of North and South America (including Central America), and who maintain tribal affiliation or community attachment.

Asian: A person having origins in any of the original peoples of the Far East, Southeast Asia, or the Indian subcontinent including, for example, Cambodia, China, India, Japan, Korea, Malaysia, Pakistan, the Philippine Islands, Thailand, and Vietnam.

Black or African American: A person having origins in any of the black racial groups of Africa

Hispanic or Latino: A person of Cuban, Mexican, Puerto Rican, South or Central American, or other Spanish culture or origin, regardless of race.

Native Hawaiian or Other Pacific Islander: A person having origins in any of the original peoples of Hawaii, Guam, Samoa, or other Pacific Islands.

TIPS ON USING VITAL STATISTICS

This publication serves as an historical recording of the most requested statistics relating to vital events and is a source of information that can be used in further analysis. While many users of vital statistics have a good working knowledge of this subject, others may not fully understand the data limitations. This section discusses items to help the reader in the use of this document.

Quality of the Data: Every precaution is taken to minimize errors in the raw data during its preparation and receipt. The data are from certificates of vital events--births, deaths, marriages, divorces, and annulments.

Each document is edited for consistency and completeness. Queries are initiated to complete or verify information on the certificate. The department is not able to change information on certificates without certifier concurrence. Therefore, the quality of the data is often dependent on the decisions of the certifying agent.

Residence or Occurrence: All data contained in this publication are by residence except marriages and divorces.

Total, Rates, or Ratios: Vital events can be reported as totals, rates, or ratios. Totals will suffice as long as the user needs to know how many times a certain event occurred and no relationship or comparison is to be made with other areas or different time periods.

When different areas or time periods are being studied, it may be best to use rates or ratios. Populations vary between areas or over time in the same area. It may be that variations in occurrence result from changes in the population and do not indicate a new trend in the vital event.

Rates or ratios express the occurrence of vital events in relation to a set standard. For example, the crude birth rate is expressed per 1,000 total population; the age-specific birth rate is expressed per 1,000 females in the specific age category. This comparison removes differences between sizes of the age group being compared over time and allows for analysis of changes in vital event patterns.

Small Number Limitations: There are two limitations involving small numbers. One involves a small number of occurrences for a particular vital event. The other limitation involves rates or ratios calculated for a small population even though the number of occurrences of that event may not be considered small. Caution should be exercised concerning the use of such data. Statistical stability cannot be assured when small numbers are used in some formulas. Determination of what constitutes a small number must be made by the individual user. Numbers smaller than 16 and populations less than 100 are generally considered unstable for use in most statistical computations.

FORMULAS

NATALITY FORMULAS

$$\text{BIRTH RATE} = \frac{\text{Number of Live Births}}{\text{Estimated Midyear Population}} \times 1,000$$

$$\text{LOW BIRTH WEIGHT RATIO} = \frac{\text{Number of Live Births with Birth Weight Under 2,500 grams}}{\text{Number of Live Births}} \times 1,000$$

$$\text{RATIO OF BIRTHS TO UNMARRIED WOMEN} = \frac{\text{Number of Live Births to Unmarried Women}}{\text{Number of Live Births}} \times 1,000$$

$$\text{AGE - SPECIFIC BIRTH RATE} = \frac{\text{Number of Live Births to Women in Specific Age Group}}{\text{Estimated Female Population in that Age Group}} \times 1,000$$

$$\text{GENERAL FERTILITY RATE} = \frac{\text{Number of Live Births}}{\text{Estimated Female Population 15 - 44 Years of Age}} \times 1,000$$

MARRIAGE FORMULAS

$$\text{MARRIAGE RATE} = \frac{\text{Number of Marriages}}{\text{Estimated Midyear Population}} \times 1,000$$

DIVORCE FORMULAS

$$\text{DIVORCE RATE} = \frac{\text{Number of Divorces and Annulments}}{\text{Estimated Midyear Population}} \times 1,000$$

MORTALITY FORMULAS

$$\text{DEATH RATE} = \frac{\text{Number of Deaths}}{\text{Estimated Midyear Population}} \times 1,000$$

AGE ADJUSTED DEATH RATE * =

$$\left(\frac{\text{Decedents < 1 Year of Age}}{\text{IA Midyear Population < 1 Year of Age}} \times 1940 \text{ U.S. Standard Million Pop. < 1 Year of Age} + \right.$$

$$\frac{\text{Decedents Aged 1 - 4}}{\text{IA Midyear Population Aged 1 - 4}} \times 1940 \text{ U.S. Standard Million Pop. Aged 1 - 4} +$$

$$\frac{\text{Decedents Aged 5 - 14}}{\text{IA Midyear Population Aged 5 - 14}} \times 1940 \text{ U.S. Standard Million Pop. Aged 5 - 14} +$$

$$\frac{\text{Decedents Aged 15 - 24}}{\text{IA Midyear Population Aged 15 - 24}} \times 1940 \text{ U.S. Standard Million Pop. Aged 15 - 24} +$$

$$\frac{\text{Decedents Aged 25 - 34}}{\text{IA Midyear Population Aged 25 - 34}} \times 1940 \text{ U.S. Standard Million Pop. Aged 25 - 34} +$$

$$\frac{\text{Decedents Aged 35 - 44}}{\text{IA Midyear Population Aged 35 - 44}} \times 1940 \text{ U.S. Standard Million Pop. Aged 35 - 44} +$$

$$\frac{\text{Decedents Aged 45 - 54}}{\text{IA Midyear Population Aged 45 - 54}} \times 1940 \text{ U.S. Standard Million Pop. Aged 45 - 54} +$$

$$\frac{\text{Decedents Aged 55 - 64}}{\text{IA Midyear Population Aged 55 - 64}} \times 1940 \text{ U.S. Standard Million Pop. Aged 55 - 64} +$$

$$\frac{\text{Decedents Aged 65 - 74}}{\text{IA Midyear Population Aged 65 - 74}} \times 1940 \text{ U.S. Standard Million Pop. Aged 65 - 74} +$$

$$\frac{\text{Decedents Aged 75 - 84}}{\text{IA Midyear Population Aged 75 - 84}} \times 1940 \text{ U.S. Standard Million Pop. Aged 75 - 84} +$$

$$\frac{\text{Decedents Aged 85 +}}{\text{IA Midyear Population Aged 85 +}} \times 1940 \text{ U.S. Standard Million Pop. Aged 85 + } \left. \right)$$

1940 Total U.S. Standard Million Population X 1,000

*Year 2000 Projected Standard Population May Be Used in the Above Formulas.

$$\text{CAUSE - SPECIFIC DEATH RATE} = \frac{\text{Number of Deaths for Specific Cause}}{\text{Estimated Midyear Population}} \times 100,000$$

$$\text{AGE - SPECIFIC DEATH RATE} = \frac{\text{Number of Deaths for Specific Age Group}}{\text{Estimated Population in that Age Group}} \times 1,000$$

$$\text{INFANT DEATH RATE} = \frac{\text{Number of Deaths <1 Year of Age}}{\text{Number of Live Births}} \times 1,000$$

$$\text{CAUSE SPECIFIC INFANT DEATH RATE} = \frac{\text{Number of Deaths <1 Year for Specific Cause}}{\text{Number of Live Births}} \times 1,000$$

$$\text{NEONATAL DEATH RATE} = \frac{\text{Number of Deaths <28 Days of Age}}{\text{Number of Live Births}} \times 1,000$$

$$\text{POSTNEONATAL DEATH RATE} = \frac{\text{Number of Deaths 28 or More Days, but <1 Year}}{\text{Number of Live Births}} \times 1,000$$

$$\text{PERINATAL DEATH RATE} = \frac{\text{Number of Fetal Deaths 20 or More Weeks of Gestation} + \text{plus Infant Deaths <28 Days of Age}}{\text{Number of Live Births}} \times 1,000$$

(The definition of perinatal mortality varies from state to state. Caution should be exercised in comparing this ratio between states.)

$$\text{FETAL DEATH RATIO} = \frac{\text{Number of Fetal Deaths 20 or more Weeks of Gestation}}{\text{Number of Live Births}} \times 1,000$$

(The definition of a fetal death varies from state to state. Caution should be exercised in comparing this ratio between states.)

$$\text{MATERNAL MORTALITY RATE} = \frac{\text{Number of Deaths due to "Complication of Pregnancy, Childbirth or the Puerperium" (ICD9 630 - 676)}}{\text{Number of Live Births}} \times 100,000$$

IOWA SUMMARY HIGHLIGHTS

	<u>1990</u>	<u>2000</u>
Births :		
Total ¹	14.2	13.1
Percent of mothers aged 19 and under	10.2	10.0
Percent low birth weight	5.4	6.1
Out-of-wedlock ²	210.2	279.8
 Deaths :		
Total ¹	9.7	9.5

Oldest Male Divorcee:	92	Oldest Female Divorcee:	89
Youngest Male Divorcee:	16	Youngest Female Divorcee:	16
Marriage of Longest Duration Ending in a Divorce: 65 years			

Charts

**Figure 1: Live Births and Deaths
1990-2000 Resident Data**

See Table 3

In 2000, the live birth rate stabilized at 13.1 per 1,000 population. The current birth rate is comparable to the rate in 1994, but still low compared to the 14.2 rate for 1990.

The death rate has declined to 9.5 in 2000. This is the lowest death rate since 1992.

**Figure 2: Marriages and Dissolutions
1990-2000 Occurrence Data**

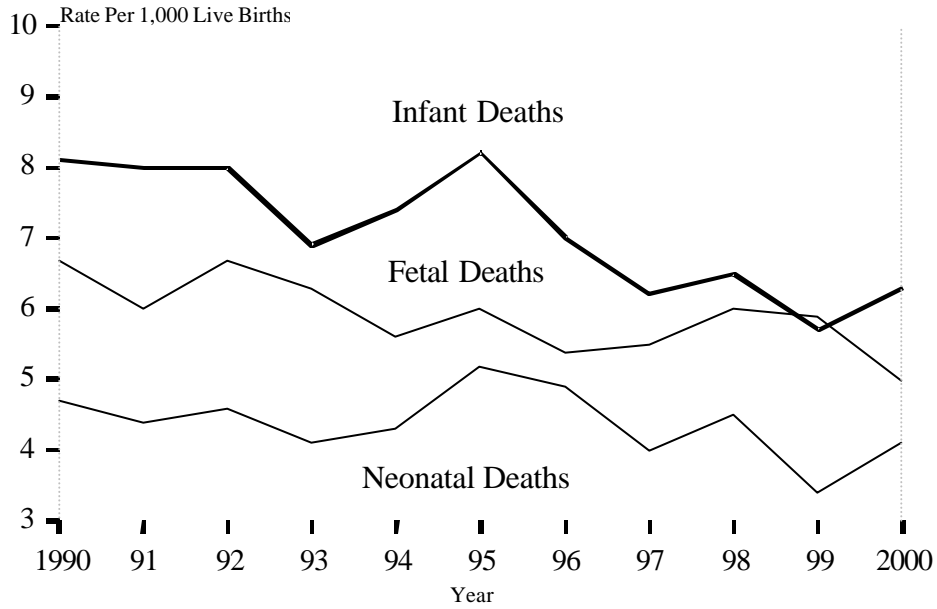

See Table 3

The current 7.4 marriage rate per 1,000 population is down, compared to 7.7 for 1999. This 2000 rate has dropped considerably from the 9.0 rate for 1990; the decrease has been nearly continuous.

The 3.3 dissolution rate has almost steadily decreased from 3.8 in 1993-1994. The exception was a slight upswing in 1998.

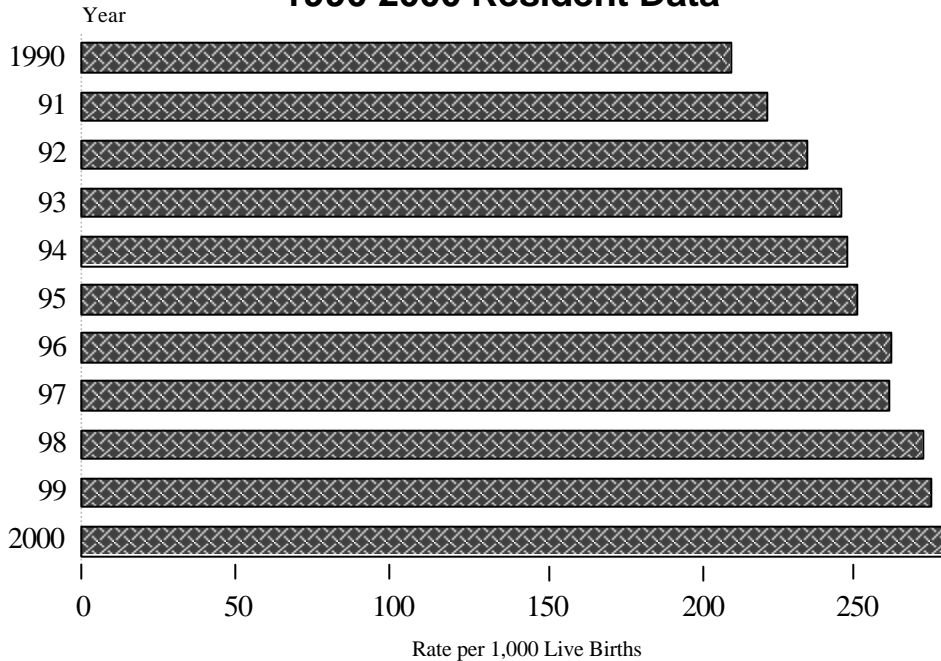

**Figure 3: Fetal, Neonatal, and Infant Deaths
1990-2000 Resident Data**

See Table 3

The infant death rate has fluctuated downward from 8.1 per 1,000 live births in 1990 to a current 6.3. During 1990-2000, the lowest rate was 5.7 for last year, compared to 8.2, which was the peak in 1995. Fetal deaths have dropped to record low 5.0 per 1,000 live births in 2000; the previous low rate was 5.4 for 1996. In contrast, neonatal deaths have increased to 4.1 per 1,000 live births from 3.4 last year. Nonetheless, the 2000 rate is well below the 5.2 rate in 1995.

**Figure 4: Out-of-Wedlock Live Births
1990-2000 Resident Data**

See Table 3

Out-of-wedlock live births rose this year to 279.8 per 1,000 live births from 275.1 in 1999; this is typical of a continuing upward trend since 1974. The only break in the trend was a slight decrease in 1997.

**Figure 5: In-Wedlock Live Births
By Age of Mother
1996-2000 Resident Data**

See Table 10

One of five in-wedlock mothers in 2000 is aged 20-24; the current percentage is 20.2, which is down from 20.4 in 1999. The largest age group, 25-29, has steadily declined to 35.8 percent of the in-wedlock live births for this year from 37.1 percent in 1997-1998. After remaining stable during 1998-1999, the percentage of mothers 30-34 years of age increased to 28.6, compared with 27.4 percent last year.

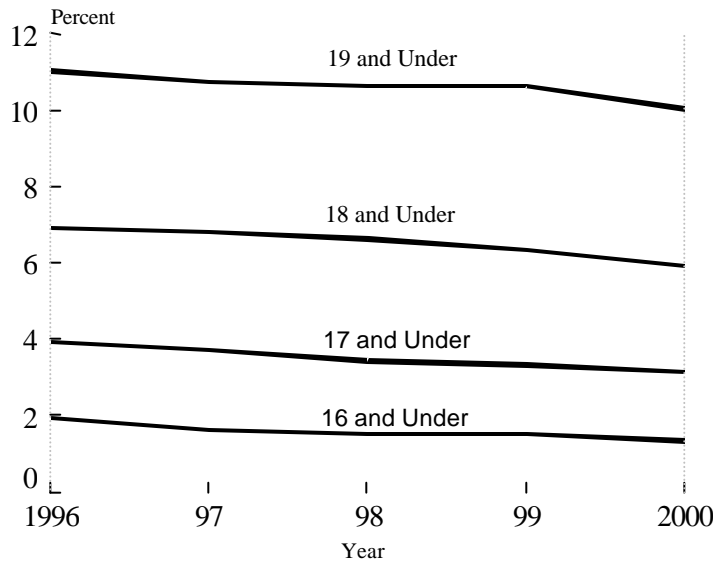

**Figure 6: Out-of-Wedlock Live Births
By Age of Mother
1996-2000 Resident Data**

See Table 11

More than 4 of 10 out-of-wedlock mothers are aged 20-24; the percentage has steadily increased to 41.4 in 2000, compared to 37.9 for 1996. Currently 29.5 percent of the out-of-wedlock mothers are 15-19 years of age. This percentage has decreased continuously from 33.4 in 1996. In contrast, the proportion of mothers in the 25-29 age group has fluctuated upward from 16.3 percent in 1996 to 17.1 for 1999 and 2000.

**Figure 7: Live Births to Teenage Mothers
As Percents of Total Live Births
1996-2000 Resident Data**

See Tables 10 and 11

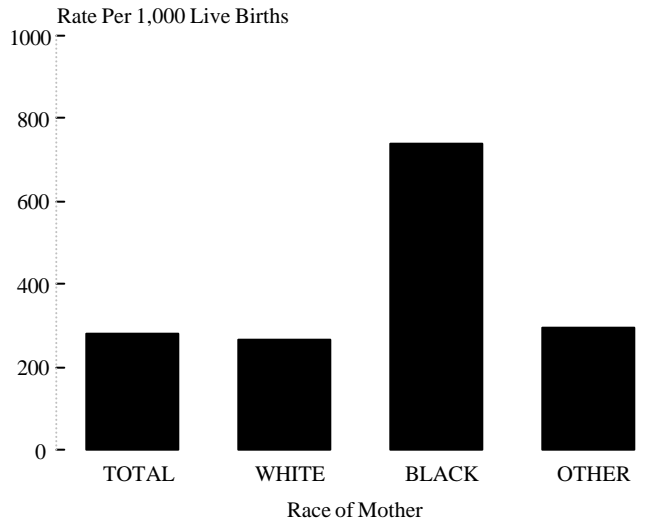

The proportion of live births born to mothers aged 19 and under has almost continuously declined during 1996-2000; the percent was 11.0 in 1996, compared to a current 10.0 percentage. A year ago, it was 10.6 percent.

**Figure 8: Mothers Under Age 20 by Race
2000 Resident Data**

See Table 9

**Figure 9: Out-of-Wedlock Live Births by Race
2000 Resident Data**

See Table 9

The low African American out-of-wedlock live birth rate increased in 2000 from 712.3 for 1999 to 739.4 per 1,000 live births. The rate for other races decreased this year; it is 294.2 compared to 305.7. The out-of-wedlock rate among white mothers, in contrast, rose to 263.7 from 259.8 last year.

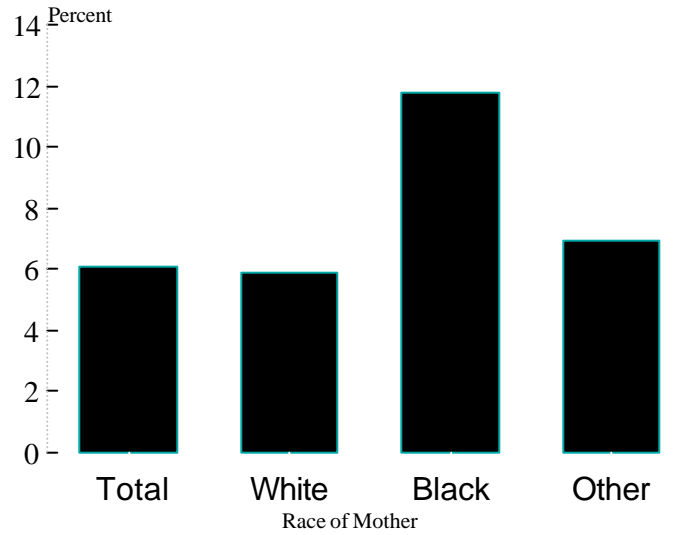

**Figure 10: Low Birth Weight Live Births as Percent of
Total Live Births within Age Group of Mother
1998-2000 Resident Data**

See Table 12

During 1998-2000, the highest percentages of low birth weight live births are among the youngest and oldest age groups of mothers.

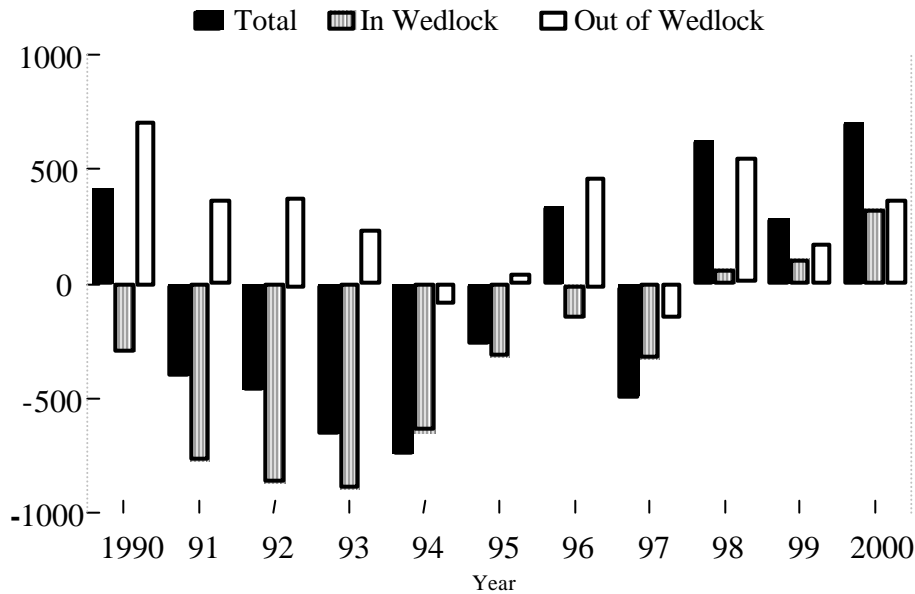

**Figure 11: Low Birth Weight Live Births by Race
As Percents of Total Live Births
2000 Resident Data**

See Table 8

African American low birth weight live births have declined in 2000 to 11.8 percent from a 12.7 percentage in 1999; the other race category has also decreased to 6.9 percent, compared to 8.3 a year ago. White low birthweight live births are at a stable 5.9 percent.

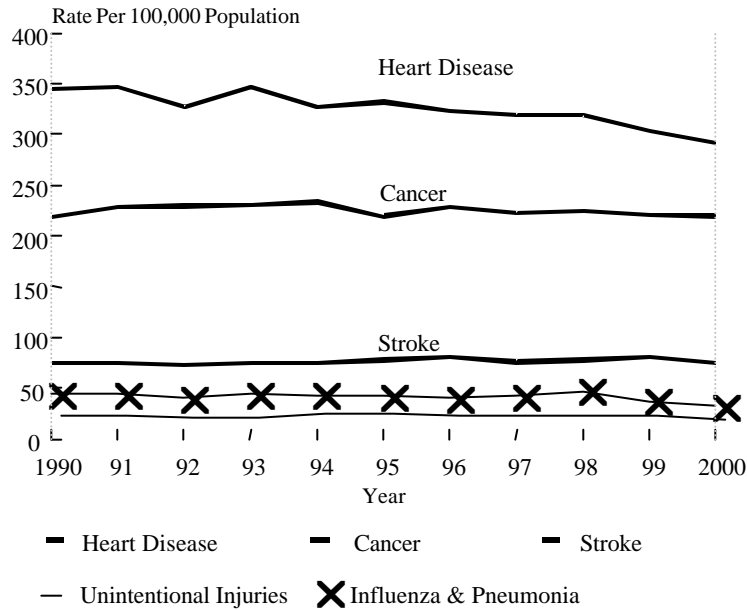

**Figure 12: Change in Number of Live Births
By Marital Status
1990-2000 Resident Data**

See Table 2

Until 1998, increases in the total number of live births have been due to increases in out-of-wedlock live births; in-wedlock live births, in contrast, have risen each year during 1998-2000.

**Figure 13: Rates for Selected Causes of Death
1990-2000 Resident Data**

See Table 14

Although heart disease is the leading cause of death in the state, the rate has steadily declined since 1995. The 2000 heart disease death rate is 290.3 per 100,000 population. The cancer death rate steadily increased from 218.0 for 1990 to 233.2 in 1994; since then, however, the rate has fluctuated downward to a current 218.8. Moreover, the decline has been continuous since 1998. The first two leading causes constitute over 50 percent of the deaths in Iowa each year.

**Figure 14: Ten Leading Causes of Death
As Percents of all Deaths by Gender
2000 Resident Data**

See Table 17

Heart disease is nearly equal among the genders with 3 out of 10 deaths. Malignant neoplasms, chronic lower respiratory diseases, and unintentional injuries are more prominent among males; stroke, influenza and pneumonia, and Alzheimer's Disease are more prominent among females.

Figure 15: Leading Causes of Death by Age Group 2000 Resident Data

From age 1 through age 44, the leading cause of death in Iowa is unintentional injuries (accidents). From age 45 to age 65, the leading cause of death is cancer. Heart disease is the leading cause after age 65.

**Figure 15 (continued): Leading Causes of Death by Age Group
2000 Resident Data**

See Table 16

Figure 16: Heart Disease Deaths by Age and Sex
Percent Distribution
2000 Resident Data

See Table 18

More lowans die from heart disease than any other cause. While more women die of heart disease than men, these deaths tend to occur at older ages. About 4 of 10 female heart disease deaths happen between 85 and 94, and more than one-half take place at age 85 and over. In contrast, nearly one-half of the male deaths are concentrated in three age groups, which encompass ages 75-89.

Figure 17: Cerebrovascular Disease Deaths by Age and Sex
Percent Distribution
2000 Resident Data

See Table 22

Cerebrovascular disease (stroke) affects older lowans more than any other leading cause of death; 56.6 percent of the male deaths are 80 and older. More than 3 out of 4 females (77.9 percent) are 80 plus years of age.

**Figure 18: Cancer Deaths by Age and Sex
Percent Distribution
2000 Resident Data**

See Table 19

Iowa cancer deaths occur to females at a somewhat older age than males; the three largest age groups: 70-74, 75-79, and 80-84 comprise 45 percent of female deaths. Moreover, one of five females dies at age 85 or older. Nearly one-half of the male deaths are contained in the 70-74, 75-79, and 80-84 age categories; the percentage for males aged 85 plus is just 14.8.

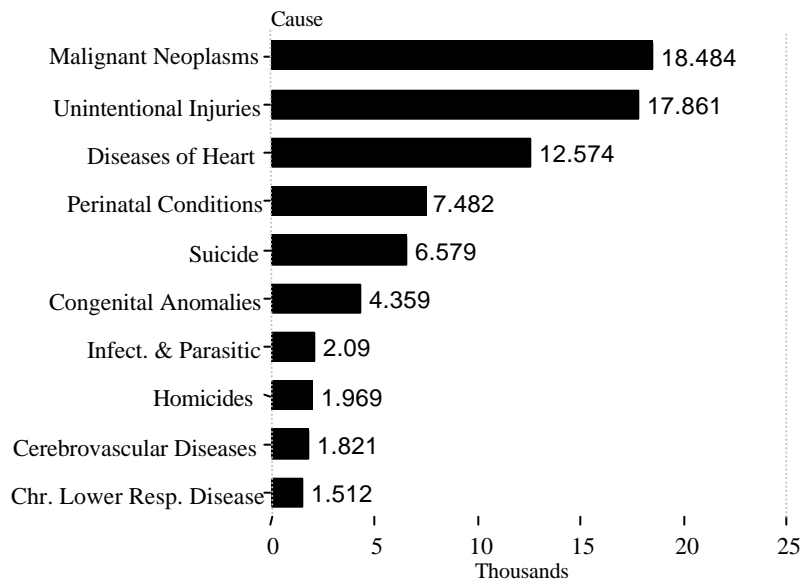

**Figure 19: Teenage and Total Suicide Deaths
1990-2000 Resident Data**

See Table 24

Total suicide deaths decreased to 286 in 2000; the number in 1999 was 302. Teenage suicides increased to 29. In 1999, there were 27 suicides.

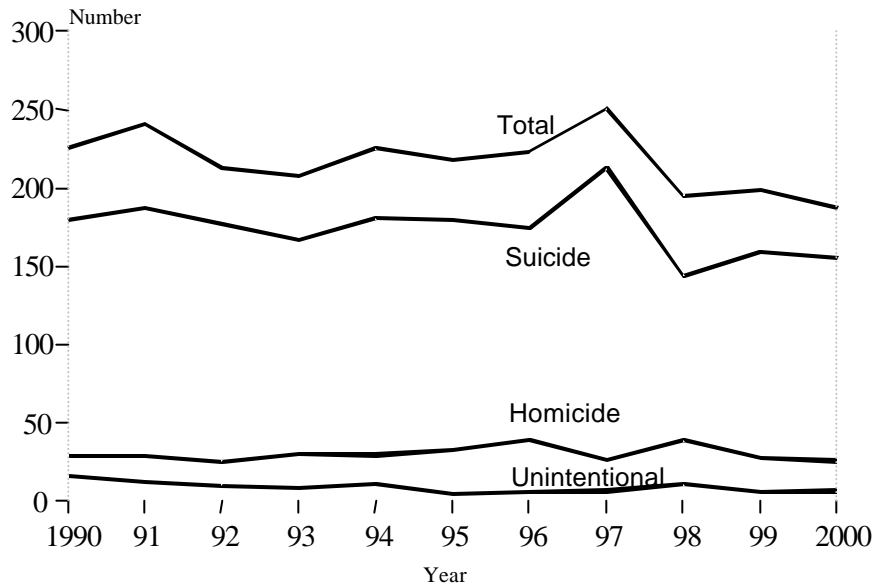

**Figure 20: Ten Leading Causes of Death in Years of Potential Life Lost before Age 65
2000 Resident Data**

See Table 16

This chart shows the cumulative effect of early deaths by subtracting an individual's age at death from 65 and adding this number to others for the same cause of death. For example, an Iowa injury victim who dies at age 45, would contribute 20 years to the "All Injuries" total. This chart focuses attention on the causes of "early" mortality; effective prevention strategies are known, such as seatbelt use, good nutrition, exercise, and avoiding use of tobacco products.

**Figure 21: Firearms Deaths by Type
1990-2000 Resident Data**

**Figure 22: Unintentional Drowning Deaths
1990-2000 Occurrence Data**

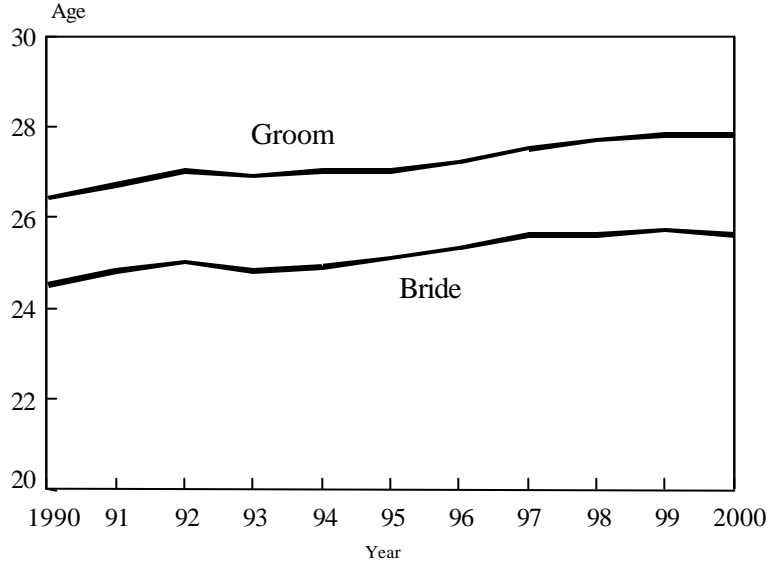

**Figure 23: Homicide Deaths
1990-2000 Resident Data**

**Figure 24: Unintentional Poisoning Deaths
1990-2000 Resident Data**

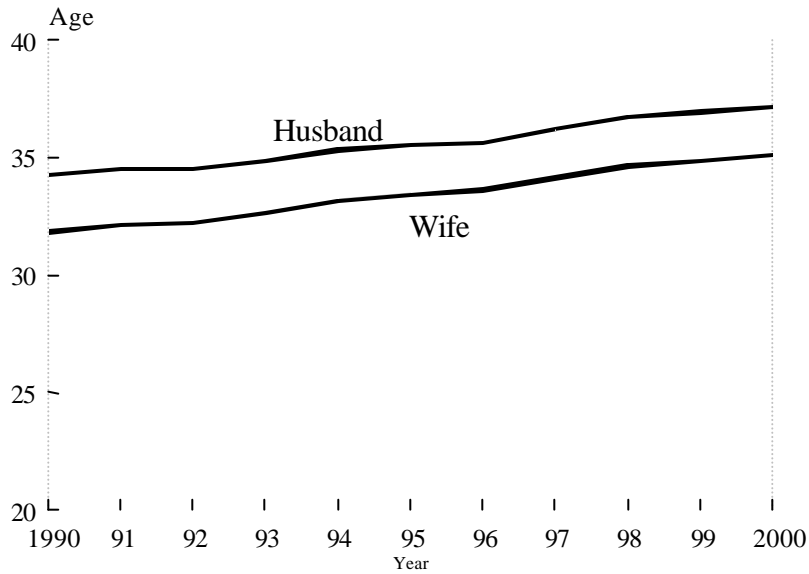

**Figure 25: Median Age at Marriage
1990-2000 Occurrence Data**

See Table 32

The median age at marriage for grooms has fluctuated upward to 27.8 from 26.4 in 1990; in addition, the median has almost steadily increased from 26.9 in 1993. Concerning brides, the median age increased continuously from 24.8 in 1993 to 25.6 in 1997-1998. The 2000 median age for brides has dropped to 25.6 from 25.7 last year. It has been nearly stable during 1997-2000.

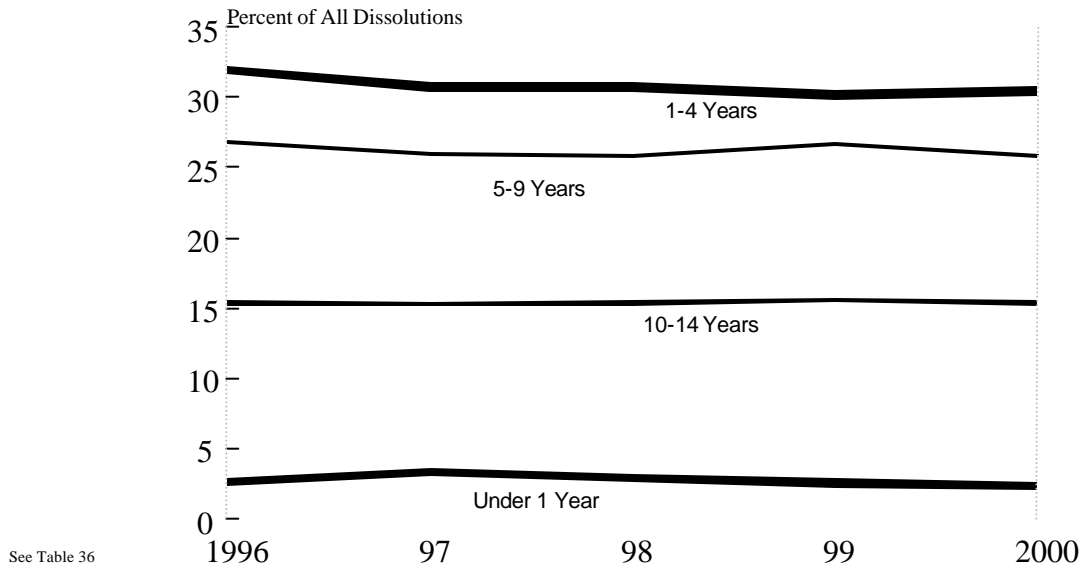

**Figure 26: Median Age at Dissolution of Marriage
1990-2000 Occurrence Data**

See Table 33

The trends in median age at dissolution of marriage are similar to those at marriage, with the median age for both husband and wife increasing over the past 10 years. The age of husband has steadily increased, except for 1992, from 34.2 to 37.1. The age of wife has risen continuously to 35.1, compared with 31.8 in 1990.

**Figure 27: Dissolutions with Selected Durations of Marriages
1996-2000 Occurrence Data**

**Figure 28: Number of Dissolutions with Children
Under 18 Years of Age Involved
1996-2000 Occurrence Data**

In 2000, 56.1% of divorces involved minor children. Each category depicting the number of children involved: 1, 2, or 3 children has fluctuated downward, compared to the number in each category for 1996.

Explanation of Vital Events Tables

Statistics are based on resident data.
The exceptions are marriages and dissolutions,
which are recorded in the county where the event occurred.

Rates for live births, deaths, marriages and dissolutions are
calculated per 1,000 estimated population; selected causes
of death rates are per 100,000 population.

Rates for out-of-wedlock live births, mothers under age 20, low birth
weight, live births, congenital malformations, fetal deaths, neonatal
deaths, perinatal deaths and infant deaths are per 1,000 live births.
Maternal deaths are per 100,000 live births.

Table 1
