DRAFT 4-6-2022

Overview

The Child and Adolescent Health Program Administrative Manual is used by Iowa Department of Public Health (IDPH or Department) staff and contractors. Whenever possible, hyperlinks to primary references have been included in the electronic version of this manual. Please note that website addresses are subject to change without notice.

Policy

Child and Adolescent Health Program Administrative Manual provides the basis for the development of policies, practices, and programming for Child and Adolescent Health (CAH) services made available through the IDPH. Policies, procedures and guidance provided in this manual shall be adhered to by contractors.

Procedure

- The following terms will be used throughout the manual:
  - Contractor - defined as the local agency contracted for Child & Adolescent Health programs and services.
  - Client - an infant, child, adolescent, primary caregiver of a client, or other individual receiving services from a contractor.
  - IDPH MCAH Data System – refers to the integrated data system that supports the CAH programs.
- The CAH Program Administrative Manual delineates the CAH core services and reflects changes in program funding. The manual is a dynamic document that may be continuously edited and updated. Each year a thorough evaluation is completed to assess whether manual revisions are necessary. The entire manual with revisions is placed on the IDPH website at http://idph.iowa.gov/family-health/resources.
- Each policy shall indicate the date it was updated or revised. Project Directors will be notified by IDPH when a new version of a policy is available. It is the responsibility of the manual user to ensure they are using the most up-to-date policy on the IDPH website.
- The annual review and/or revision process does not preclude revisions that might be needed at other times of the year. Manual users, both state and local, may request consideration of manual revisions at any time. All such requests are routed through the Bureau Chief of the Bureau of Family Health.

Title: Purpose and Framework of the CAH Program
Effective Date: 10/01/2022
Revision Date:
Date of Last Review:
Authority: Iowa Administrative Code 641 IAC 76 (135), Social Security Act Title V Sec. 501. [42 U.S.C. 701]

Overview
The Child & Adolescent Health (CAH) program promotes the development of the systems of care for children and adolescents from birth through age 21 years, and their families in order to provide quality medical and dental homes providing services that are family-centered, community-based, collaborative, comprehensive, coordinated, culturally competent, and developmentally appropriate.

The purpose of the federal MCH Block Grants to states is to create a federal-state partnership to develop service systems in our nation's communities to meet critical challenges in maternal and child health, including:

A. To provide and to assure mothers and children (in particular those with low income or with limited availability of health services) access to quality MCH services.
B. To reduce infant mortality and the incidence of preventable diseases and handicapping conditions among children.
C. To reduce the need for inpatient and long-term care services.
D. To increase the number of children (especially preschool children) appropriately immunized against disease and the number of low income children receiving health assessments and follow-up diagnostic and treatment services, and otherwise to promote the health of mothers and infants by providing prenatal, delivery, and postpartum care for low income, at-risk pregnant women, and to promote the health of children by providing preventive and primary care services for low income children.
E. To provide rehabilitation services for blind and disabled individuals under the age of 16 receiving benefits under Title XVI, to the extent medical assistance for such services is not provided under Title XIX; and
F. To provide and to promote family-centered, community-based, coordinated care for children with special health care needs (CSHCN) and to facilitate the development of community-based systems of services for such children and their families.

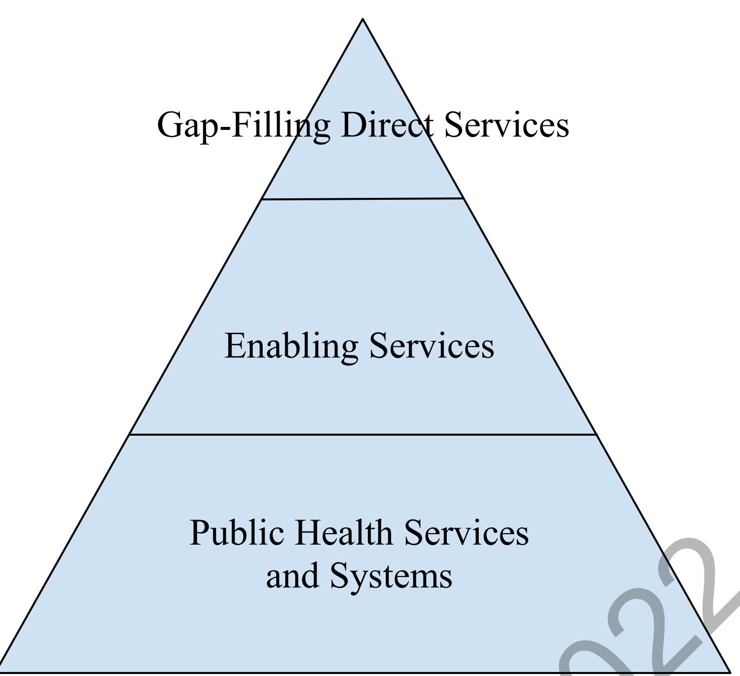
DRAFT 4-6-2022

Vision of Title V: Title V envisions a nation where all mothers, infants, children aged 1 through 21 years, including CSHCN, and their families are healthy and thriving.

Mission of Title V: The mission of Title V is to improve the health and well-being of the nation's mothers, infants, children and youth, including children and youth with special health care needs, and their families.

Framework: The purpose and goals of the CAH program are implemented through the framework of the MCH Pyramid, core public health functions, and ten essential services.

MCH Pyramid



DRAFT 4-6-2022

Public Health Services and Systems involve activities that support the development and maintenance of comprehensive health service systems and population-based health services. Examples include:

- Assessment of community needs and assets
- Data collection and analysis
- Program planning and evaluation
- Development and monitoring of policies and procedures
- Establishment of community linkages with primary care providers
- Coalition and collaboration building
- Professional development and training
- Quality assurance and quality improvement initiatives
- Population-based services that provide preventive personal health services for groups of individuals rather than in one-on-one situations. Examples include:
    - Oral screenings for the school screening requirement
    - Breastfeeding promotion and support
    - Health education for groups
    - Sudden Unexpected Infant Death Syndrome (SUIDS) awareness and education
    - Child care and school health education
    - Public health awareness campaigns

Enabling services assist families to gain access to health care services. Examples include:

- Medicaid and Hawki Outreach
- Presumptive eligibility
- Care coordination
- Well visit reminders
- Assisting with transportation
- Assisting with interpretation services

Gap-Filling Direct Care Services provided by CAH programs are available to high risk, low income individuals enrolled in CAH programs based on individual and/or population identified needs**.** See policy Provision of Gap-Filling Direct Care Services, 837.

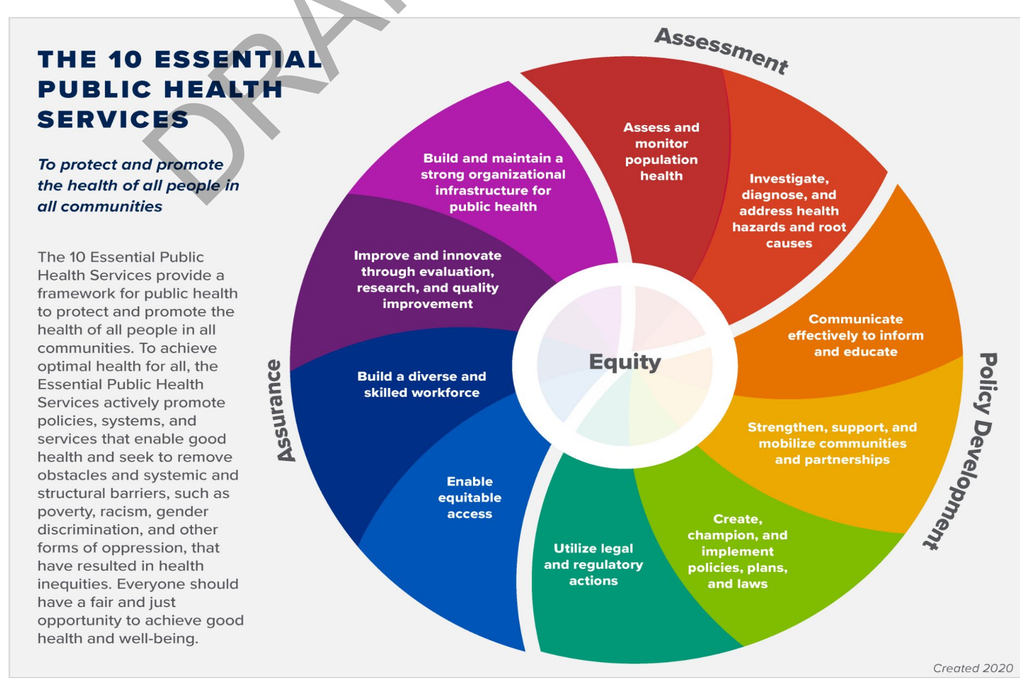
Core Public Health Services: The core public health functions described in the 1988 Institute of Medicine report, *The Future of Public Health*, provides the framework for the nation's public health system. They include:

- Assessment
- Policy Development
- Assurance

Ten Essential Public Health Services: The 10 Essential Public Health Services (EPHS) describe the public health activities that all communities should undertake. They are:

1. Assess and monitor population health status, factors that influence health, and community needs and assets.
2. Investigate, diagnose, and address health problems and hazards affecting the population.
3. Communicate effectively to inform and educate people about health, factors that influence it, and how to improve it.
4. Strengthen, support, and mobilize communities and partnerships to improve health.
5. Create, champion, and implement policies, plans, and laws that impact health.
6. Utilize legal and regulatory actions designed to improve and protect the public's health.
7. Assure an effective system that enables equitable access to the individual services and care needed to be healthy.
8. Build and support a diverse and skilled public health workforce.
9. Improve and innovate public health functions through ongoing evaluation, research, and continuous quality improvement.
10. Build and maintain a strong organizational infrastructure for public health.

DRAFT 4-6-2022



A crosswalk of the 10 Essential Public Health Services with the purpose of the State MCH Block Grants, as defined in Section 501(a)(1) of Title V of the Social Security Act, yielded the following strategies for states to use in their program planning:

1. Conduct ongoing assessment of the changing health needs of the MCH population to drive priorities for achieving equity in access and positive health outcomes.
2. Expand surveillance and other data systems capacity to support rapid investigation of emerging health issues that affect the MCAH population (e.g., Zika and Neonatal Abstinence Syndrome).
3. Inform and educate the public and families about the unique needs of the MCH population.
4. Mobilize partners, including families and individuals, at the federal, state and community levels in promoting shared vision for leveraging resources, integrating and improving MCH systems of care, promoting quality public health services and developing supportive policies.
5. Provide expertise and support for the formation and implementation of state laws, regulations and other policies pertaining to the health of the MCH population (e.g., perinatal regionalization/risk appropriate care and suicide prevention).
6. Integrate systems of public health, health care and related community services to ensure equitable access and coordination to achieve maximum impact.
7. Promote the effective and efficient organization and utilization of resources to ensure access to necessary comprehensive services for CYSHCN and families through public health services, systems, and population health efforts.
8. Educate the MCH workforce to build the capacity to ensure innovative, effective programs and services and the efficient and equitable use of resources.
9. Support or conduct applied research resulting in evidence-based policies and programs.
10. Facilitate rapid innovation and dissemination of effective practices through quality improvement and other emerging methods.
11. Provide services to address unmet needs in health care and public health systems for the MCH population.

Date of Last Review:
Authority: Iowa Code § 135.11(17); Iowa Administrative Code 641IAC 76; 641 IAC 50; Public Law 105-17: IDEA '97: PART C; HRSA 42 USC Section 705(A) (5)(F)

Overview

Federal authority for the MCAH program in Iowa is derived from Title V of the Social Security Act. In 1935, Congress enacted Title V of the Social Security Act which authorized the MCH Services Program and provided a foundation and structure for assuring the health of mothers and children. Today, Title V is administered by the Maternal and Child Health Bureau as part of the Health Resources and Services Administration, Public Health Service, U.S. Department of Health and Human Services.

In 1935, Title V created the first federal-state partnerships in MCH services, Crippled Children's services and Child Welfare services. Over the years, the Title V MCH program was amended several times in order to respond to socioeconomic realities and changes in political ideology. A major change to Title V MCH was the creation of the MCH Services Block Grant as part of the Omnibus Budget Reconciliation Act of 1981 (OBRA 81).

The Omnibus Budget Reconciliation Act of 1989 (OBRA 89) significantly changed the MCH Services Block Grant again. States are now required to focus their efforts on preventive and primary health care for children, pregnant women and infants, and children with special health care needs. OBRA 89 requires states to improve accountability by conducting and submitting a periodic statewide needs assessment and report on the status of women and children served by the block grant. In 2015, an updated performance measure framework was introduced to reflect more clearly the contributions of Title V in improving health outcomes among the MCH population.

DRAFT 4-6-2022

Block Grants

The Title V MCH Services Block Grant program currently has three components: formula block grants to 59 states and territories, Special Projects of Regional and National Significance (SPRANS), and Community Integrated Service Systems (CISS) grants.

Each year, Congress sets aside funding for the Maternal and Child Health Block Grant. Individual State allotments are determined by a formula, which considers the proportion of low-income children in a particular state compared to the total number of low-income children in the entire U.S. States and jurisdictions must match every $4 of federal Title V money that they receive by at least $3 of state and/or local money (i.e., non-federal dollars).
Additional information about the block grant can be found on the HRSA MCHB website.

Iowa Code and Iowa Administrative Code

The Iowa General Assembly has directed IDPH to administer the statewide Maternal and Child Health Program in accordance with the requirements of Title V for the purpose of improving the health of low-income women and children. Iowa Code § 135.11(17). IDPH has adopted

administrative rules to implement the program: 641 Iowa Administrative Code (IAC) Chapter 76 provides the authority for Iowa's Maternal and Child Health Program and adopts the Omnibus Reconciliation Act of 1989 (OBRA 89, PL 101-239) requirements. Responsibility for operation of the Maternal and Child Health Block Grant (Title V MCH) is given by the code to the IDPH, Bureau of Family Health.

The Iowa Administrative Code at 641IAC 50 describes the purpose and responsibilities of the state oral health program and dental director.

Grant Application

The Iowa Department of Public Health periodically solicits proposals to select the most qualified applicants to provide public health services at the community level for the CAH Program. This is accomplished through a competitive Request for Proposal (RFP) for a multi-year project period. A Request for Application (RFA) is developed annually for the contractor's application of continued funding within the project period as defined by the applicable competitive selection document. Contracts are issued for one year increments based on a review of the RFP and RFAs, Contractors are required to comply with both the general and special conditions of the contract, this Manual, and all relevant laws. This application process complies with the Iowa Department of Public Health Service Contracting Policy (#FS 07-03-014), as well as 641 Iowa Administrative Code chapters 76 and 176.

Integration of Title V and Medicaid

Between 1967 and 1989 Congress enacted a number of amendments to Title V, adding requirements that MCH programs work closely with Medicaid in a number of activities. The amendments are located in Title V rules at HRSA 42 USC Section 705(a)(5)(F). The amendments require that state Title V MCH programs:

- Assist with coordination of EPSDT
- Establish coordination agreements with their state Medicaid program
- Provide a toll-free number for families seeking Title V or Medicaid providers
- Provide outreach and facilitate enrollment of Medicaid eligible children and pregnant women
- Share data collection responsibilities, particularly related to infant mortality and Medicaid.
- Provide services to children with special health care needs and disabilities not covered by Medicaid.

In Iowa the Department of Human Services (DHS) and Department of Public Health (IDPH) contract for the purpose of mutual cooperation, developing and sustaining a collaborative relationship to promote the availability of comprehensive, cost effective and quality health care services.

I-Smile™

The I-Smile™ program is the outcome of Medicaid reform legislation passed in 2005 by the Iowa Legislature. House File 841 and included the following language: "…every recipient of medical assistance who is a child twelve years of age or younger shall have a designated dental home and shall be provided with the dental screenings and preventive care identified in the oral health standards under the Early and Periodic Screening, Diagnostic, and Treatment program."

DRAFT 4-6-2022

In response, DHS partnered with IDPH, the Iowa Dental Association, the Iowa Dental Hygienists' Association, Delta Dental of Iowa, and the University of Iowa College of Dentistry to develop a plan that would fulfill the dental home mandate. The result is called the I-Smile™ Dental Home Program. The Iowa Administrative Code 641, Chapter 50 outlines the administrative detail of the dental programs.

Integration with Early ACCESS

Congress created the Individuals with Disabilities Education Act, Part C [20 U.S.C. 631] (IDEA) to assist states to design and implement systems of early intervention services for infants and toddlers with disabilities and their families. Iowa's Program called Early ACCESS is a partnership between families with young children, birth to age three years, and providers from the signatory agencies (Iowa Department of Education, IDPH, DHS and Child Health Specialty Clinics). The purpose of this program is for families and staff to work together in identifying, coordinating, and providing needed services and resources that will help the family assist their child in growth and development.

DRAFT 4-6-2022

Number: 104
Title: Iowa Department of Public Health Organizational Structure
Effective Date: 10/01/2022
Revision Date:
Date of Last Review:
Authority: Iowa Code chapters 135, 136, 136A; 641 Iowa Administrative Code chapters 74, 76, 77, 79, 80

Overview
The CAH program is administered by IDPH, Division of Health Promotion and Chronic Disease Prevention (HPCDP), Bureau of Family Health (BFH), pursuant to federal and state law and an agreement with the United States Department of Health and Human Services, Health Resources and Services Administration.

Iowa Department of Public Health

- Mission Statement: Promoting and protecting the health of Iowans
- Vision Statement: Healthy Iowans living in healthy communities

IDPH's programs are conducted through the executive staff and the following five divisions:

- Acute Disease Prevention, Emergency Response and Environmental Health
- Administration and Professional Licensure
- Behavioral Health
- Health Promotion and Chronic Disease Prevention
- Tobacco Use Prevention and Control

The Iowa State Board of Health is the policy-making body for IDPH. It has the powers and duties to adopt, amend and repeal rules and regulations, and advises or makes recommendations to the governor, general assembly and the IDPH director on public health.

Additional information on IDPH and its programs is available on the Iowa Department of Public Health website at www.idph.iowa.gov

Division of Health Promotion and Chronic Disease Prevention

- Mission Statement: Supporting a public health system that promotes healthy behaviors, prevents disease and provides access to care.
- Vision Statement: Healthy Iowans living in healthy communities

The Iowa legislature designated IDPH as the administrator for Title V MCAH services and directed IDPH to contract with the University of Iowa Department of Pediatrics, Child Health Specialty Clinics as the state's Title V provider for the Children and Youth with Special Health Care Needs (CYSHCN) Program. The BFH is responsible for administering the MCAH Program.

Bureau of Family Health
The BFH has primary responsibility for system planning; program development and evaluation; developing and monitoring standards of care; and coordinating health-related services between and among community-based entities serving families in Iowa. The bureau has many additional programs focusing on the health of children including: Maternal Infant Early Childhood Home

DRAFT 4-6-2022

Visiting (MIECHV), 1st Five Healthy Mental Development, family planning, Early Hearing Detection and Intervention, teen pregnancy prevention, Infant Mental Health, and the Center for Congenital and Inherited Disorders. The Bureau works closely with other bureaus, divisions and state departments to accomplish the health-related goals for families in Iowa.

Bureau of Oral and Health Delivery System

- Mission Statement: Promoting the overall health and wellness of every Iowan through prevention of disease and improved access to health care.
- Vision Statement: Healthy Iowans living in healthy communities.

The Bureau of Oral and Health Delivery Systems (OHDS) is responsible for the core public health functions of assessment, policy development, and assurance of oral health services in the state. OHDS Bureau staff provide consultation and training for programs targeting pregnant women, infants, children, and youth.

Programs focus on preventing dental disease and promoting oral health for all Iowans. The bureau oversees new and existing oral health programs including the following: I-Smile™ Dental Home Initiative, I-Smile™ @ School, community water fluoridation, School Dental Screening Requirement, Cavity Free Iowa, Donated Dental Services, Dental Loan Repayment/Fulfilling Iowa's Need for Dentist (FIND), and Children's Oral Health for Underserved Populations. The bureau serves as a partner with BFH in administering the oral health components of EPSDT.

DRAFT 4-6-2022

Number: 105
Title: Admission to Child & Adolescent Health Program
Effective Date: 10/01/2022
Revision Date:
Date of Last Review:
Authority: 641 Iowa Administrative Code chapters 76, 77, , 80, Social Security Act Title V Section 506; Title 42, Chapter 7 Section 712 Chapter 148 Section 6.15

Overview

The purpose of admission into the Child & Adolescent Health (CAH) program is to assist the client in accessing primary and preventive health care. The CAH program utilizes a medical home model to enable children and adolescents to receive quality care from a primary care provider responsible for both sick and well care. Children and adolescents (birth to age 22) are eligible for the program.

"Medical home" means a team approach to providing health care that originates in a primary care setting; fosters a partnership among the client, the personal provider, and other health care professionals, and where appropriate, the client's family; utilizes the partnership to access all medical and nonmedical health-related services needed by the client and the client's family to achieve maximum health potential; maintains a centralized, comprehensive record of all health-related services to promote continuity of care; and has all of the following characteristics:

- A personal provider
- A provider-directed team-based medical practice
- Whole person orientation
- Coordination and integration of care
- Quality and safety
- Enhanced access to health care
- A payment system that appropriately recognizes the added value provided to patients who have a patient-centered medical home

Not all children and families in Iowa have had the same access, power, and privilege related to social determinants of health and the health care system. As a result health inequities exist among racial, ethnic, and other groups. Specific inclusion of these priority populations in planning, implementation, and evaluation of CAH programming is necessary to address these health inequities. Priority populations may be eligible for and/or require additional services, outreach, and accommodation to assure access to services and increase health equity in Iowa. The priority populations are:

- Asian, Pacific Islander
- Black, African American, or African
- Fathers, men
- Latino, Latina, Latinx, or Hispanic
- Lesbian, gay, bisexual, transgender, queer, instersex (LGBTQI+)
- Native American, Alaska Native
- Persons with disabilities
- Refugees or immigrants

DRAFT 4-6-2022

Policy
Contractors shall admit children and adolescents to the CAH program to assist them in accessing quality primary and preventive health care. Contractors shall provide enabling services to all children and adolescents admitted to the CAH program to access a medical and dental home.

Procedure
A comprehensive assessment of the health status, social determinants of health, and needs of the client and family shall be completed at admission, updated on the date of service or within the 30 days prior, and annually thereafter while the child is enrolled in the program.

The adolescent (18 to 22 years old), or a family member with decision-making responsibility, is asked to sign a consent for services form and a release of information (ROI). A ROI is obtained if any medical record elements or health information will be shared outside the agency (see Client Record Policy). If information will not be shared outside of the agency, a ROI is not required for admission into the CAH program.

Enabling services are provided to assist the family in decreasing barriers to accessing preventive services through their medical and dental home.

Direct care services are offered only after enabling services to assist the family in accessing the service through their medical home has failed. Documentation of the enabling services provided must be included in the client's record.

Any client admitted to the CAH program must be entered in the IDPH MCAH Data System. A ROI is not required for entering data into the MCAH data system.

DRAFT 4-6-2022

Number: 106
Title: Child & Adolescent Health Program Eligibility & Voluntary Participation
Effective Date: 10/01/2022
Revision Date:
Date of Last Review:
Authority: Iowa Administrative Code 641-76; Social Security Act Title V Section 506; Title 42, Chapter 7 Section 712 Chapter 148 Section 6.15

Overview

All children and adolescents under 22 year of age who are residents of Iowa are eligible for Child & Adolescent Health (CAH) services. Title V provides financial assistance for children and adolescents who qualify based on their insurance status and family income.

Policy

All children and adolescents under 22 years of age who are residents of Iowa are eligible for (CAH) services. Contractors shall determine eligibility for coverage of services and bill accordingly.

DRAFT 4-6-2022

Procedure

Assist children and adolescents who may be eligible for Medicaid or Hawki

- Children and adolescents who are uninsured or underinsured and whose family income falls within income guidelines for Medicaid shall be assisted in applying for Medicaid.
- Children and adolescents who are uninsured or underinsured and whose family income falls within income guidelines for Hawki shall be assisted in applying for Hawki.

Financial coverage of services for children not eligible for Medicaid or Hawki

- Children and adolescents who are uninsured or underinsured and not eligible for Medicaid or Hawki may be eligible for services covered by Title V if their family income falls within the income guidelines for the Hawki program.
- Children and adolescents with private insurance:
  - may have services billed to their insurance,
  - may be private pay based on a sliding-fee-scale, or
  - the contractor can use program income or other funds to cover the costs of services.
- Title V grant funds may not be used for children with insurance or who are underinsured but whose income exceeds Title V guidelines.
- Children and adolescents whose family income is below the poverty level established by Hawki receive Title V CAH services at no charge. Contractor may bill insurance, use Title V grant funds, program income or other funds to cover the cost of services
- Children and adolescents whose family income is above the poverty level and below 300% of Federal Poverty Guidelines qualify for Title V CAH services on a sliding fee scale.
- Children and adolescents whose family income is at or above 300% of the poverty level qualify for Title V CAH services at full fee.

Assess income on all children and adolescents

- Income is assessed on all children and adolescents based on Federal Poverty Guidelines, family income, and household size. Income information is provided by the individual or family (self-declared).
- Income is calculated as follows:
  - Annual income is estimated based on the individual and/or family's income for the past three months, unless the individual and/or family's income will be changing or has changed.
  - In the case of self-employed families, the past year's income tax return (adjusted gross) is used in estimating annual income unless a change has occurred.
  - Terminated income is not considered
- Proof of Title XIX, Title XXI, or WIC eligibility serves in lieu of income assessment.
- Federal Poverty Guidelines are published annually by the U.S. Department of Health and Human Services (DHHS). CAH program eligibility guidelines are adjusted following any change in DHHS guidelines.
- Family is defined as a group of two or more persons related by birth, marriage, adoption, or residing together and functioning as one socioeconomic unit.
- Eligibility determination must be done at least once annually. Should the individual and/or family's circumstances change in a manner that affects third party coverage or Title XIX or Title XXI eligibility, eligibility determination shall be completed.

Residency Requirement

Children and adolescents must currently reside in Iowa to receive Title V CAH services.

Voluntary Participation

- Title V services are provided solely on a voluntary basis. Individuals shall not be subjected to coercion or discrimination in the delivery of services. Acceptance of Title V services is not a prerequisite to eligibility of any other services, assistance, or participation in any other program.
- Clients are encouraged to ask questions and may refuse a service or stop services at any time.

Contractors and subcontractors shall have and maintain approved personnel policies and procedures that comply with applicable Federal and State requirements.

1. Contractors and subcontractors must establish and maintain personnel policies that comply with all applicable Federal, State, and local laws and requirements, including but not limited to Title VI of the Civil Rights Act of 1964 (PL 88-352), 45 CFR Part 80, Section 504 of Rehabilitation Act of 1973, the Americans with Disabilities Act of 1990 as amended, the Iowa Civil Rights Act of 1965 as amended, Equal Employment Opportunity Act of 1973, the Age Discrimination Act of 1968 and 1975 and the OWBPA of 1990, 7 CFR Part 15, OSHA, the Drug Free WorkPlace Act of 1988, the Family and Medical Leave Act (FMLA), Certification of Compliance with Pro-Children Act of 1994, the Patient Protection and Affordable Care Act (ACA) and the Iowa Smokefree Air Act at Iowa Code chapter 142D. Contractors and subcontractors should consult with the agency or organization's legal counsel to ensure compliance with all relevant federal, state, and local laws.
2. Contractors are responsible for ensuring that subcontractors have the required personnel policies and procedures that comply with all applicable Federal, State, and local requirements. Contractors shall document the review of subcontractor personnel policies and procedures.
3. Each contractor and subcontractor providing direct care services shall perform those services under the direction of the Medical Director (see Medical Director policy).
4. Contractors shall verify licenses of applicants for positions requiring licensure **prior** to employment and documentation of licenses must be kept current. The contractor is responsible for assuring all persons, whether employees, contractors, subcontractors or anyone acting on behalf of the contractor, are properly licensed, certified, or accredited as required under applicable state law.
5. Contractor shall not knowingly enter into any lower tier covered transaction with a person who is proposed for debarment under 48 CFR part 9, subpart 9 .4, debarred, suspended, declared ineligible, or voluntarily excluded from participation in this covered transaction, unless authorized by the Department of Human Services, Iowa Medicaid Enterprise, and Iowa Department of Public Health.
6. Contractors must provide standards of practice for service providers, including staff, contractors, and subcontractors, who are not otherwise licensed, certified, or accredited under state law or administrative code.
7. All MCAH personnel, including staff, contractors, and subcontractors must complete orientation to MCAH program requirements and demonstrate proficiency prior to providing services in the MCAH program.
8. IDPH reserves the right to inquire at any time about the staffing assignments, training, and credentials of any staff member with direct responsibilities in the MCAH programs.
9. All orientation, training, and continuing education shall be documented in the personnel file.

DRAFT 4-6-2022

10. Contractors shall ensure policies and procedures are in place that direct how all programs and services are to be administered.
11. Contractors and subcontract staff should be representative of the population served.
12. Contractors are required to satisfy the minimum staffing and credentialing requirements of IDPH CAH programs.
13. Contractors and subcontractors shall supply documentation of staffing in the form of time studies, direct hours billed, and/or staff timesheets upon request.
14. Contractors shall ensure confidential, secure, and appropriate guidelines for teleworking and providing health care services from an approved telework site are maintained if staff are allowed to telework.
15. The following is a list of required Contractor policies:
    a. Confidential personnel records
    b. Personnel policies which are available to all personnel
    c. Job descriptions for all positions, reviewed annually or as specified by contractor's policies, and updated whenever necessary to reflect changes in duties. Job descriptions must be in compliance with applicable Iowa code for scope of practice of each staff member who is licensed by the state.
    d. An evaluation and review of job performance of all project personnel must be conducted annually.
        i. All MCAH personnel shall have an annual review of competency and performance in the provision of family-centered services.
        ii. All MCAH personnel providing clinical care shall have an annual review of competency in the skills required for each clinical service.
    e. Written policy on the provision of continuing education, including attendance at professional development activities to promote cultural and linguistic competencies. It is suggested that all personnel have the option to attend continuing education based on an assessment of training needs, quality assurance indicators, and changing regulations/requirements. Cultural competency training must be documented.
    f. Child and Dependent Abuse Reporting (see Child and Dependent Abuse Reporting policy)
    g. Timekeeping, including time studies.

DRAFT 4-6-2022

Resources

Number: 202
Title: Required Personnel
Effective Date: 10/01/2022
Revision Date:
Date of Last Review:
Authority: Iowa Administrative Code 641-76, IDPH Contract General and Special Conditions

Overview
A broad range of competencies are required of personnel to carry out CAH public health services and systems, enabling services, and direct health care services. Contractors must secure and retain personnel or subcontractors with expertise in public health, business administration, quality assurance and improvement, policy development, information systems, community systems building, health equity, care coordination, child and adolescent health, and child and adolescent clinical care.

Policy
Contractors are required to satisfy the minimum staffing and credentialing requirements of IDPH.

Procedure
The following positions, credentials and competencies are required:

Medical Director: See Medical Director Policy Number 204

Executive Director: The executive director is responsible for supervisory and contract management tasks related to the programs included in the application. Communications regarding the CAH contract shall be sent to the executive director. It is the responsibility of the executive director to appropriately disseminate information to the contractor's board of directors, project director and program coordinators. Information related to the contract may be sent to the board of directors, program director, and program coordinators at the discretion of IDPH. The executive director's responsibilities include, but are not limited to:

1. Serving as contract administrator
2. Supervising the project director and program coordinator
3. Providing overall supervision of the MCAH programming (planning, development and evaluation)
4. Overseeing the annual program and budget application
5. Developing and managing subcontracts
6. Assuring that written policies, procedures, and accounting comply with state and federal laws
7. Monitoring budgets and expenditures
8. Coordinating MCAH program activities with other agency programs
9. Reporting to the agency board of directors and/or the local Boards of Health

Project Director: The project director is required to have a bachelor's degree in a health or human services field; or current license as a registered nurse (RN) with a bachelor's degree in any field; a minimum of six months experience in health or human services; and demonstration of the following skills and experience:

DRAFT 4-6-2022

1. Ability to synthesize quantitative and qualitative data to make decisions for program implementation;
2. Strong interpersonal skills and experience building and maintaining relationships with a variety of partners, and positive conflict resolution skills;
3. Communication skills, including the ability to communicate with individuals, small and large groups about programs and services;
4. Lived experience as a member of a priority population or experience working with priority populations;
5. Experience convening and facilitating groups, such as coalitions or committees, with a focus on a specific topic, health outcome, or population; and
6. Understanding of health equity and child and adolescent health disparities.

The project director's responsibilities include, but are not limited to:
1. Communicate information to staff, contractors, and subcontractors
2. Manage the CAH contract by:
    a. Ensuring completion of activity work plans and other required forms
    b. Ensuring budgets are in compliance with guidance and state and federal laws
    c. Ensuring completion of contractor reports
    d. Overseeing contractual relationship with subcontractors
    e. Providing written notice of key personnel changes
    f. Ensuring progress on program activities
    g. Monitoring compliance with grant activities and submits changes to IDPH as necessary
    h. Overseeing and coordinate programming
    i. Ensuring provision and coordination of services
    j. Ensuring documentation requirements are met
    k. Providing leadership for chart audits and service note reviews and other quality assurance activities
3. Ensure provision of high quality enabling services to clients by:
    a. Ensuring a robust referral network is maintained to meet the needs of all clients by building a referral network throughout the CSA of primary care providers to serve as medical homes; provide comprehensive well child visits to Title V clients, clients during the Presumptive Eligibility period, and clients enrolled in Medicaid Fee-For-Service. These networks shall include:
        i. providers in all counties of the CSA.
        ii. providers with lived experience and/or special training in the needs of priority populations and who provide culturally and linguistically appropriate care for priority populations.
        iii. providers outside the contractor's organization/system to ensure client choice.
    b. Ensuring equal opportunity, support, and assistance to clients regardless of provider chosen.
    c. Collaborating with the I-Smile coordinator to ensure child and adolescent dental services are available.
    d. Ensuring provision of enabling services to clients.
    e. Ensuring effective, client-centered referrals with follow up for each client.
4. Planning and oversight of CAH services:

DRAFT 4-6-2022

a. Collect and monitor quantitative and qualitative data to determine program needs for the entire CSA.
b. Ensure implementation of quality improvement initiatives.
c. Attend meetings and training relevant to CAH Program operations.
d. Ensure compliance with state and federal laws and guidelines.
e. Ensure training for staff and subcontractors.
f. Ensure participation in the community health needs assessments and health improvement plans (CHNA-HIPs) within the service area.
g. Ensure collaboration and community engagement throughout the CSA.
h. Assist the local boards of health in the performance of the core public health functions of assessment, assurance, and policy development.
i. Ensure development and implementation of high quality public health services and systems level activities.
j. Foster coordination among local programs serving families (Title X, home visiting, WIC, MH, CAH, I-Smile, HCCI, Hawki, etc.) and subcontractors.
k. Provide outreach and education in the community about child and adolescent health, including priority populations.
l. Act as a liaison in CSA between local public health/boards of health, IDPH/DHS, and other agencies and community coalitions.
m. Ensure outreach, engagement, and education with families about CAH programs and services.
n. Engage families to provide direction and feedback for program planning, implementation and evaluation.
o. Engage the community in communicating and developing solutions to child and adolescent health needs, issues, and concerns.
p. Engage families from priority populations and community agencies serving priority populations.

DRAFT 4-6-2022

Fiscal Officer: The fiscal officer is responsible to carry out activities directed by the executive director and project director. The fiscal officer is responsible for management of accurate accounting for grant and other funds using generally accepted accounting principles and meeting requirements of applicable Federal Office of Management and Budget (OMB) circulars.

Child Care Nurse Consultant: Child Care Nurse Consultants (CCNC) hired or contracted to provide services under the Healthy Child Care Iowa (HCCI) program are required to be a registered nurse with current Iowa licensure in addition to one of the following:

1. Bachelor of Science in Nursing or higher, or
2. Minimum of two years of experience as a registered nurse in community health or pediatric practice.

The CCNC must complete the Iowa Training Project for Child Care Nurse Consultants (ITPCCNC) course supported by IDPH. A minimum of 4-20 hours of work time per unit is expected to complete the 12 units of ITPCCNC training. The training series must be completed within three months from the time of enrollment into the course. See the Child Care Nurse Consultant Role Guidance for additional requirements and responsibilities.

Hawki Outreach Coordinator: Contractors are encouraged to hire individuals with recent lived

experience. This may include people who:

1. Self-identify as belonging to a priority population;
2. Have been enrolled in Medicaid or Hawki in the 2 years preceding hire; or
3. Are the parent(s) of a child enrolled in Medicaid or Hawki in the 2 years preceding hire.

The responsibilities of the Hawki Outreach coordinator include, but are not limited to:

1. Promoting the implementation of best practice outreach strategies to encourage enrollment in Hawki and Medicaid programs.
2. Ensuring dissemination of approved and up-to-date program information.
3. Completing required reports and attending required meetings.
4. Be a qualified entity to conduct Presumptive Eligibility throughout the CSA.
5. Conducting Hawki and Medicaid Outreach to businesses and organizations in the community providing onsite Presumptive Eligibility throughout the CSA.
6. Conducting Hawki and Medicaid Outreach outside traditional business hours (8am to 5pm Monday through Friday) and on weekends to provide education and assistance with Presumptive Eligibility to individuals with a variety of work schedules.

CAH Data Administrator: The responsibilities of the CAH Data Administrator include, but are not limited to:

1. Sharing announcements, updates, and information with all CAH program staff about the IDPH MCAH data system.
2. Monitoring CAH quality assurance reports and implementing quality improvement plans to improve data entry.
3. Ensuring new CAH staff receive training on the IDPH MCAH data system.
4. Assisting CAH program staff in troubleshooting data entry and workflow issues.
5. Attending required training.
6. Monitoring addition and deletion of users.
7. Performing editing functions in the IDPH MCAH data system client records.
8. Notifying IDPH of any security breaches and cooperating with investigations.

DRAFT 4-6-2022

Resources

Sources

Number: 203
Title: Excluded Providers
Effective Date: 10/01/2022
Revision Date:
Date of Last Review:
Authority: Section 1903(i)(2) of the Social Security Act (the Act); 42 CFR section 1001.1901(b); section 1128B(f) of the Act) based on the authority contained in various sections of the Act, including sections 1128, 1128A, and 1156; Iowa Administrative Code 441-79.2

Overview

IDPH supports efforts to prevent Medicaid fraud by requiring contractors to check the Medicaid exclusion status of individuals and entities prior to entering into employment or contractual relationships. The effect of an exclusion (not being able to participate) is:

1. No payment will be made by any federal health care program for any items or services furnished, ordered, or prescribed by an excluded individual or entity. Federal health care programs include Medicare, Medicaid, and all other plans and programs that provide health benefits funded directly or indirectly by the United States (other than the Federal Employees Health Benefits Plan). For exclusions implemented prior to August 4, 1997, the exclusion covers the following federal healthcare programs: Medicare (Title XVIII), Medicaid (Title XIX), Maternal and Child Health Services Block Grant (Title V), Block Grants to States for Social Services (Title XX) and State Children's Health Insurance (Title XXI) programs.
2. No program payment will be made for anything that an excluded person furnishes, orders or prescribes. This payment prohibition applies to the excluded person, anyone who employs or contracts with the excluded person, any hospital or other provider where the excluded person provides services, and anyone else. The exclusion applies regardless of who submits the claims and applies to all administrative and management services furnished by the excluded person.
3. There is a limited exception to exclusions for the provision of certain emergency items or services not provided in a hospital emergency room.

DRAFT 4-6-2022

Policy

Contractors shall check the Medicaid exclusion status of individuals/entities prior to entering into employment or contractual relationships.

Procedure

The contractor shall:

1. Check the List of Excluded Individuals and Entities (LEIE) site prior to entering into employment or contractual relationships.
2. Check the site at least annually for current employees and contractors. Contractors should search the HHS-OIG website to capture exclusions and reinstatements that have occurred since the last search.
3. Document that the search was complete for all employees, subcontractors, and contractors.

Number: 204
Title: Medical Director
Effective Date: 10/01/2022
Revision Date:
Date of Last Review:
Authority: Iowa Administrative Code 641-76, IDPH Contract General and Special Conditions

Policy
Contractors must have a formal agreement with a physician (MD or DO) to serve as a medical director. The responsibilities of the medical director include oversight and consultation for CAH programs. All clinical policies shall be reviewed, approved, and signed annually by the Medical Director. Each contractor and subcontractor providing direct care services will perform those services under the direction of a physician with special training or experience in Child and Adolescent Health.

Procedure
One physician may serve as the medical director for multiple programs, provided their medical specialty qualifies them to serve in that capacity.

Only licensed or certified professionals operating at a level and within a scope of practice appropriate for their license or certificate may provide health services. Physician assistants and registered nurses perform delegated medical functions under protocols and/or standing orders approved by the medical director. Advanced registered nurse practitioners may provide clinical health services based on their licenses and within the contractor's policies and procedures. A medical director may delegate functions to other health care professionals provided such functions are within the professional's scope of practice and consistent with the contractor's policies and procedures.

Prior to providing medical services, staff must be oriented to the CAH program, trained in the agency's policies and procedures, and demonstrate competence in providing the service.

At a minimum, Contractors must meet with their Medical Director once a year to review policies, procedures, and general CAH programming.

DRAFT 4-6-2022

Number: 205
Title: Child Abuse Reporting
Effective Date: 10/01/2022
Revision Date:
Date of Last Review:
Authority: Iowa Code § 235B.3(2); Iowa Code § 232.69; Child Abuse: A Guide for Mandatory Reporters, Comm. 164; Dependent Adult Abuse: A Guide for Mandatory Reporters, Comm. 118; 441 Iowa Administrative Code 175

Policy
Contractors shall ensure all staff who come in contact with children and dependent adults have completed the Iowa Department of Human Services (DHS) Mandatory Reporter Training on recognizing abuse and training on the agency policies and procedures about reporting suspected abuse. Contractors shall have policies and procedures that comply with Iowa Code and Iowa Administrative Code for mandatory and permissive assessment and reporting of child and dependent adult abuse.

Overview
The child abuse reporting law is to provide protection to children by encouraging the reporting of suspected abuse. DHS has the legal authority to conduct an assessment of alleged child and dependent adult abuse.

It's everyone's responsibility to report suspected abuse. Iowa Code section 232.69 defines certain professionals as mandatory reporters of child abuse and Iowa Code section 235B.3(2) defines certain professionals as mandatory reporters of dependent adult abuse. Professionals in the fields of health, law enforcement, child care, education, mental health, and social work who have contact with children in the course of their work are considered to be mandatory reporters.

Although anyone can report child and dependent adult abuse and are encouraged to do so, mandatory reporters are required by law to make a report of suspected abuse within 24 hours of becoming aware of the concern(s).

DRAFT 4-6-2022

HF731, signed into law on May 8, 2019, delegates responsibility for mandatory reporter training to the Iowa Department of Human Services. Mandatory reporters are required to complete the training every three years. This will be the only approved training allowed in Iowa. DHS access for the course: https://dhs.iowa.gov/child-welfare/mandatoryreporter.

Procedure
Contractors shall have policies in place that specify agency compliance with Iowa Code that address child and dependent adult abuse and reporting of abuse. Contractors shall have written policies outlining the following:

1. Every individual required to report suspected abuse as defined in Iowa Code 232.69(1) and Iowa Code 235B.3(2) must complete 2 hours of mandatory reporter training within their first six months of employment or self-employment and one hour of additional training every three years (unless otherwise specified by federal regulations). If employees or contractors qualify as a mandatory reporter for both child abuse and

dependent adult abuse, they are required to take both trainings and maintain certification for both curricula.
2. Maintenance of documentation showing completion of training(s) for each employee or contractor.
3. Job classifications identify staff or contractor positions that are mandatory assessors and reporters of child abuse.
4. The procedure for filing child abuse reports, both verbal and written.
5. Storage and access to written child abuse reports.
6. Process for consulting with supervisor or medical director when staff are unsure if to report or not.
7. Provision and procedure for staff who are permissive reporters to report suspected abuse.

Contractors are responsible for contacting the Department of Human Services for guidance and interpretation of the law.

Number: 300
Title: Criteria for Becoming an EPSDT Medicaid Screening Center
Effective Date: 10/01/2022
Revision Date:
Date of Last Review:
Authority: Medicaid Screening Center Provider Manual, Omnibus Agreement

Overview
Medicaid Screening Centers are a type of designated service provider through the Department of Human Services (DHS), Iowa Medicaid Enterprise (IME), and the Iowa Department of Public Health (IDPH) Title V Program. Screening Centers provide services to Medicaid and Title V eligible clients and are able to bill for these services in compliance with the DHS Medicaid Screening Center Provider Manual and Medicaid policies.

Policy
Child and Adolescent Health (CAH) contract agencies are required to meet and maintain qualifications necessary for designation as Medicaid Screening Centers. Programs participating as Medicaid Screening Centers must comply with quality standards and provide services consistent with guidelines established by the Iowa Department of Human Services, Iowa Medicaid Enterprise, and the Iowa Department of Public Health. See the Medicaid Screening Center Provider Manual for more information.

Procedure
- New Contractors shall apply to Iowa Medicaid to become a Medicaid Screening Center Provider to bill Medicaid EPSDT Services.
- The application process and necessary documentation are located on the DHS website: Enrolling as a Medicaid Provider.
- Only Contractors are eligible to be Screening Centers, subcontractors are not eligible. Services provided by the subcontractor must be processed through the Contractor as the Screening Center.
    - Contractors (acting as a subcontractor) providing services via agreement with another Contractor shall work with the Contractor holding the contract for the service area to determine billing. This shall be outlined in the written agreement to provide services.
- A letter authorizing the Contractor as a contractor in good standing with IDPH will be required.

Number: 301
Title: Required Policies and Procedures
Effective Date: 10/01/2022
Revision Date:
Date of Last Review:
Authority: Iowa Administrative Code 641-76, IDPH Contract General and Special Conditions; OCIO Information Technology Standards

Overview
A policy should state the course of action an organization wants to pursue. Procedures describe actions or tasks necessary to meet a specific policy. Policies and procedures must be made available and accessible to all staff.

Policy
Contractors and subcontractors shall have written policies and procedures that guide administration and operations of the CAH programs. These policies and procedures shall comply with federal and state law, IDPH contract conditions, Office of Chief Information Officer Standards, and this manual.

Procedure
Policies and procedures should be reviewed and revised annually or according to agency policy, and no less frequently than every three years.

1. Contractors reviewing policies less than annually shall specify the frequency in agency policy.
2. An effective date, revision effective date, and revision history shall be clearly indicated.
3. The following policies and procedures are required:
    a. Personnel (See Required Personnel Policies)
    b. Emergency (See Emergency Policy) (medical and facility)
    c. Fiscal Policies
        i. Accounting Standards
        ii. Approval authorities
        iii. Bad debt write off
        iv. Billing procedures
        v. Continuous daily time studies
        vi. Expenditure reports
        vii. Inventory management
        viii. Lines of responsibility
        ix. Method for determining administrative and indirect costs
        x. Payment schedule-Client fees
        xi. Sliding fee scale
        xii. Purchasing procedures
        xiii. Record-keeping requirements
        xiv. Segregation of duties
        xv. Staff representation of client population
        xvi. Responsibility and review of subcontractor policies and procedures
        xvii. Medical director supervision
        xviii. Minimum staffing and credentialing requirements

DRAFT 4-6-2022

    xix. Excluded providers
  d. Medical record policies
    i. Limited acceptable abbreviations in client records
    ii. Record security, maintenance, retention, and storage
    iii. Client consent
    iv. Release of information
  e. Program policies
    i. Appointment system
    ii. Eligibility - Admission
    iii. Referrals and follow up
    iv. Integration of CAH program and services with other IDPH programs and services
    v. Quality assurance/quality improvement
    vi. Confidentiality
    vii. Review and approval of informational and educational materials
    viii. Client and family input
    ix. Limited English Proficiency
    x. Interpretation and use of interpreters
    xi. Confidential, secure, and appropriate guidelines for telework sites, if staff are allowed to telework
    xii. Certification of Compliance with Pro-Children Act of 1994. The Contractor must comply with Public Law 103-227, Part C Environmental Tobacco Smoke, also known as the Pro-Children Act of 1994 (Act).
  f. Direct Care Clinical policies
    a. Contractors must maintain policies and procedures for all direct care clinical services provided. If direct care services are provided at multiple sites, there must be policies specific to the services provided at those locations.
    b. Standing orders must also be written and available to employees and subcontractors for routine procedures (for example: lead blood draws and immunization administration). Standing orders must be reviewed and signed off on by the contractor's medical director at least annually.

DRAFT 4-6-2022

Title: Client Records
Effective Date: 10/01/2022
Revision Date:
Date of Last Review:
Authority: Contract General Conditions; Medicaid Screening Center Manual; 441 Iowa Administrative Code 79.3, 641 IAC 76.11

Overview

Client records support delivery of services, continuity of care, and are important risk management and quality improvement tools.

Policy

Client records shall be specific, factual, relevant and legible. Client records shall be kept up to date, completed, signed and dated by the person who provided the service.

Contractors must establish a medical record for every client who obtains direct health care services. These records must be maintained in accordance with accepted medical standards and state and federal laws with regard to record retention.

Contractors must comply with all state and federal laws, standards and guidelines regarding documentation in client records; storage, handling, security, retention, access, release and disclosure of patient health information and client records. All CAH client records (hard copy and/or electronic) are the property of IDPH.

DRAFT 4-6-2022

Procedures

1. Contractors must establish a medical record for every client who obtains a direct health care service. These records must be maintained in accordance with accepted medical standards and state and federal laws with regard to record retention. Records must be:
   a. Complete, legible, accurate, and include documentation of all encounters of a clinical nature.
   b. Readily accessible;
   c. Systematically organized to facilitate prompt retrieval and compilation of information;
   d. Secure; (See Maintenance, Security and Property Rights)
   e. Confidential; and (See Release of Records and Confidentiality)
   f. Available upon request to the client. (See Release of Records)
2. For Healthy Child Care Iowa (HCCI) client records that do not relate to an individual's health, see the CCNC Role Guidance (on the IDPH CCNC web page) for what shall be contained in the client record.
3. The client's medical record must contain sufficient information to identify the client, indicate where and how the client can be contacted, justify the clinical impression or diagnosis, and warrant the treatment and end results. The required content of the medical record includes:
   a. Demographic information including gender, race, ethnicity, translator needed
   b. First and last name on each page
   c. Date of birth and Medicaid/MCAH data system identification number

d. Pertinent medical history
e. Problem list listing identified problems to facilitate continuing evaluation and follow-up
f. Entries must be signed by the service provider including name, credentials, and date
g. Location where service provided
h. Necessary follow up and scheduled revisits
i. Informed consents – initial and annual updates
j. Release of information if applicable
k. Refusal of services if applicable
l. HIPAA Notice of Privacy Policy acknowledgement or declination
m. Current medications
n. Allergies and untoward reactions to drug(s) recorded in a prominent and specific location
o. Assessment of medical and dental insurance
p. Name of primary care provider and dentist
q. If direct health care service, the chart must include or indicate the need for the following:
    i. Physical exam, laboratory test orders, and results if conducted
    ii. Reports of clinical findings, diagnostic and therapeutic orders, diagnoses and documentation of continuing care, referral, and follow-up
    iii. Entries by counseling and social service staff. Contractors must maintain a problem list listing identified problems to facilitate continuing evaluation and follow-up.
    iv. Treatment and special instructions

DRAFT 4-6-2022

4. Client financial information should be kept separated from the client medical record. If included in the medical record, client financial information must not be a barrier to client services.
5. Documentation of all CAH services must comply with generally accepted principles for maintaining health care records and with Medicaid requirements established in 441 Iowa Administrative Code 79.3.
6. Contractors are responsible for the accuracy and compliance of their records, including those of all subcontractors.
7. Contractors must comply with IDPH contract requirements for timely data entry. Documentation of services must be made at the time of service and be available to IDPH by the 15th of the following month. End of state or federal fiscal year may shorten the timeframe for documentation to be available for payment.

Electronic Health Records
Contractors transitioning to electronic health records will be held to the requirements of this policy. Every effort must be made to maintain confidentiality in the electronic health record system. Clients should be informed if the agency uses an electronic health record system that can be accessed by other providers and acknowledge that they received that information.

Maintenance, Retention, Security and Property Rights of Client Records
1. See IDPH General Conditions Sections 3, 5, 8, 9, 10, 15, and 28 for additional requirements related to client records.

2. CAH records will be maintained on the IDPH approved MCAH data system(s).
3. In the event that a contract is terminated, IDPH will provide direction for the transfer of client records. Electronic health records will be transferred in a manner deemed appropriate by IDPH. Agencies must have the capability to separate Title V CAH records for the purpose of audits and record transfers.
4. Records that are integrated with larger health systems or multiple program data systems (Electronic Health Records, etc.) must be able to be set up and maintained so that Title V services can be extracted from the system, without compromising the client's confidentiality related to non-Title V services in the event of an audit or record transfer.
5. Contractor shall provide facilities and equipment which ensure the protection of confidential information at all sites (office, clinics, mobile/satellite, approved telework, etc.) where CAH programs or services are conducted. Contractors and subcontractors are prohibited from using personally owned electronic equipment, removable media and other devices to store, view, receive, or send records (medical, accounting, financial, programmatic, statistical, supporting documentation and other MCAH program records).
6. Contractors and subcontractors are prohibited from accessing client records in a location that does not protect the confidentiality of the record. Client records may only be accessed using work issued electronic equipment (cell phones, tablets, computers, etc.). Contractors shall not connect to unauthenticated public Wi-Fi networks (free public Wi-Fi typically available in coffee shops, libraries, rest stops, airports, and other public venues) or networks using WEP and WPA to access client records or confidential information. Devices shall not connect to public charging stations\kiosks.
7. Client records shall be stored in areas and in such a way as to protect from moisture and flooding. Contractors are discouraged from storing client records in basements and areas at increased risk for flooding/water damage.
8. Client records must be maintained in a secure manner that prevents unauthorized access.

DRAFT 4-6-2022

Release of Records

1. Contractors are required to comply with all applicable regulations of the Health Insurance Portability and Accountability Act of 1996 (HIPAA) and subsequent amendments, including Subtitle D of the Health Information Technology for Economic and Clinical Health Act, Title XIII of Division A, and Title IV of Division B of the American Recovery and Reinvestment Act of 2009 (HITECH) and the federal regulations published at 45 CFR parts 160 and 164.
2. The written consent of the client is required for the release of personally identifiable information, except as may be necessary for treatment services, payment, or health care operation activities or as required or authorized by law, with appropriate safeguards for confidentiality.
3. HIV, substance use, and mental health information should be handled according to the laws regarding these special classifications of information.
4. A release of information is not required for entering data into the MCAH data system or sharing charts with IDPH for audit and quality improvement purposes or for the performance of other public health activities.
5. When information is requested, agencies should release only the specific information requested. Information collected for reporting purposes may be disclosed only in summary, statistical, or other form, which does not identify particular individuals. Any

release of statistical or aggregate data must comply with IDPH's Disclosure of Confidential Public Health Information, Records, or Data Policy and all relevant federal and state laws.

6. Upon request, clients transferring to other providers must be provided with a copy or summary of their record to expedite continuity of care.
7. Contractors shall comply relevant federal and state laws regarding release for records and charges for release of records. Charges for records released directly to the client must be placed on the appropriate sliding fee scale.
8. Contractors and subcontractors are prohibited from accessing client records, including data entry outside work sites (which includes offices, clinics, and approved telework sites)

IDPH General Conditions, Information Technology Standards and HIPAA

1. Contractors shall follow and comply with all IDPH General Conditions.
2. Contractors shall follow and comply with all State of Iowa Office of the Chief Information Officer Information Technology standards.
3. Contractors are required to comply with all applicable federal and state laws which govern the use, maintenance, privacy, security, and disclosure of client records, including but not limited to:
4. HIPAA and subsequent amendments, including Subtitle D of the Health Information Technology for Economic and Clinical Health Act, Title XIII of Division A, and Title IV of Division B of the American Recovery and Reinvestment Act of 2009 (HITECH) and the federal regulations published at 45 CFR parts 160 and 164.

Number: 303
Title: Abbreviations in Client Records
Effective Date: 10/01/2022
Revision Date:
Date of Last Review:
Authority: Contract General Conditions; Medicaid Screening Center Manual; 441 Iowa Administrative Code 79.3

Overview
Limited use of standardized abbreviations leads to improved communication and understanding between service providers and delivery of safe and effective care of clients.

Policy
Contractors shall maintain a limited, standardized and uniform set of codes, symbols and abbreviations in client records. A written list of approved abbreviations is maintained and accessible to all staff and subcontractors. A written list of do-not-use abbreviations is maintained and accessible to all staff and subcontractors.

Service Provider
Any staff documenting in client record

Procedure
- Before a new abbreviation is introduced, determine if it is necessary.
- Do not create an abbreviation that is already in use for some other meaning or has a contradictory or ambiguous meaning. Use comprehensive and up-to-date resources such as the US National Library of Medicine's PubMed, medical abbreviation books and websites to determine if the abbreviation is in use or if there is already a standardized abbreviation for the word.
- The contractor shall maintain a written list of approved abbreviations and a written list of do-not-use abbreviations. None of the approved abbreviations shall be contained on the Institute for Safe Medication Practices list of error-prone abbreviations.
- Abbreviations can only have one meaning within the entire organization.
- Abbreviations are prohibited on patient materials and documents (examples: informed consent forms, client rights documents, client education materials).
- All staff and subcontractors must have easy access to the written lists and know where to find them.

Number: 304
Title: Client Consent for Services
Effective Date: 10/01/2022
Revision Date:
Date of Last Review:
Authority: Contract General Conditions; Medicaid Screening Center Manual; Iowa Administrative Code 641 IAC 76

Overview
General consent for direct care services must be provided by every client. General consent is required before the patient can be examined or treated or before minor testing (such as lab work or routine imaging studies) can be done.

Policy
All Clients must consent for direct care services. Consent forms must be signed annually or more often if circumstances change who the signatory authority is (i.e., if a parent/guardian provided consent for a minor who has now reached the age of majority, the newly eligible adult must sign their own consent).

DRAFT 4-6-2022

Procedure
- Annually, contractors must obtain, prior to the provision of any services, written consent for services from the client to indicate voluntary acceptance of CAH direct care services.
- All consents must be maintained in the client's record.
- The consent for services must be written in a language understood by the client or translated and witnessed by an interpreter. If a telephone interpreter is used, the company name, name and ID number of the interpreter, and date/time must be documented on the consent.
- Consent for services must include the date the client was offered, or received, the organization's Notice of Privacy Practices (NPP).
- The consent for services must include notification that the CAH client records created and maintained are the property of the Iowa Department of Public Health and therefore may be shared with the Iowa Department of Public Health and its agents, Title V contractors, Iowa Medicaid Enterprise, or designee for audit, preventive health services, quality improvement, and other legally authorized purposes.
- The consent for services must include authorization from the client (or parent/guardian as applicable) to receive information via text or email.
- If clients choose to delay or defer a service, counseling must be provided about the risks associated with such a delay and documented in the record.

Minor Consent
The following is a summary of Iowa laws which govern the ability of a minor to independently consent to medical care, treatment, and services. If Maternal Health and/or Child & Adolescent Health contract agency staff have questions about the application of the following laws, they should contact their agency's legal counsel to receive guidance.

Definition of Minor: Iowa law generally provides that any person under the age of eighteen is a minor. However, persons who are married prior to the age of eighteen and persons who are

incarcerated as adults are deemed to have attained the age of majority and may consent to medical care, services, and treatment.

> "*The period of minority extends to the age of eighteen years, but all minors attain their majority by marriage. A person who is less than eighteen years old, but who is tried, convicted, and sentenced as an adult and committed to the custody of the director of the department of corrections shall be deemed to have attained the age of majority for purposes of making decisions and giving consent to medical care, related services, and treatment during the period of the person's incarceration.*" Iowa Code § 599.1. *See also* Iowa Code §§ 135L.1(7), 600A.2(12), 600A.2B(1), 728.1(4).

Emancipated Minors: Iowa Statutory and common law also recognize majority for 'emancipated' minors, defined as those minors who are absent from the parental home with the consent of the parents, are self-supporting, and have assumed a new relationship inconsistent with being part of the family of the parents. Iowa Code chapter 232C; See also Iowa Code chapter 232C; Vaupel v. Bellach, 154 N.W.2d 149 (Iowa 1967).

- A minor will not be found to be emancipated solely on the basis of becoming pregnant or giving birth to a child. Bedford v. Bedford, 752 N.W.2d 34, 2008 WL 681138 (Iowa App. 2008).
- Minors who have been adjudicated as emancipated do not need parental consent to receive medical, dental, or psychiatric care. Iowa Code § 232C.4.

DRAFT 4-6-2022

Exemptions to Parent/Guardian Consent for Minors
Under general common law, a health care provider must obtain the consent of a minor's parent or guardian in order to render medical care, treatment, or services to a minor. Courts have recognized limited exceptions to the general rule of parental consent. In addition, the Iowa legislature has enacted several statutory provisions which expressly authorize minors to provide independent consent to receive medical care, treatment, and services.

The purpose behind these minor consent statutes is to encourage minors to receive medical care they might not otherwise receive if they had to obtain consent from a parent or guardian. Every state legislature including Iowa's has enacted statutory exceptions to override the common law parental consent rule and give minors the legal authority to consent to some types of medical care for certain diseases, conditions, and situations.

A minor may consent to the following health care services without the permission or consent of their parents or guardians:

- **Non-medical Services**: Certain public health services provided to minors may not require parental consent if the service does not constitute medical care or treatment. For example, providing educational services to minors under the WIC program does not constitute medical care or treatment and therefore does not require consent from a parent or guardian.
  Contraceptive Services: A person may request contraceptive services directly from a licensed physician or a family planning clinic. A minor may give written consent to receive the services and such consent is not subject to later

disaffirmance by reason of minority. Iowa Code § 141A.7(3). Carey v. Population Services, International 431 U.S. 678 (1977)

- **Emergency Care**: Health care providers (including physicians, physician designees, ARNPs, PAs, RNs, LPNs, and emergency medical care providers) are not required to obtain parental consent prior to rendering "emergency medical, surgical, hospital, or health services" to a minor, if the parent or guardian is not "reasonably available." Iowa Code § 147A.10(2).
- **Sexually Transmitted Diseases:** "A minor shall have the legal capacity to act and give consent to provision of medical care or services to the minor for the prevention, diagnosis, or treatment of a sexually transmitted disease or infection by a hospital, clinic, or health care provider. Such medical care or services shall be provided by or under the supervision of a physician licensed to practice medicine and surgery or osteopathic medicine and surgery, a physician assistant, or an advanced registered nurse practitioner. Consent shall not be subject to later disaffirmance by reason of such minority. The consent of another person, including but not limited to the consent of a spouse, parent, custodian, or guardian, shall not be necessary." Prevention, Diagnosis and Treatment Iowa Code § 139A.35
- **Tobacco Cessation Services:** Minors twelve years of age or older may consent to receive tobacco cessation services from IDPH's Quitline provider. The text of the law provides as follows: "A minor who is twelve years of age or older shall have the legal capacity to act and given consent to the provision of tobacco cessation coaching services pursuant to a tobacco cessation telephone and internet-based program approved by the department. Consent shall not be subject to later disaffirmance by reason of such minority. The consent of another person, including but not limited to the consent of a spouse, parent, custodian, or guardian, shall not be necessary." Iowa Code § 142A.11 .
- **Victim Medical and Mental Health Services:** A minor who is the victim of sexual abuse or assault may receive medical and mental health services without the prior consent or knowledge of the minor's parent or guardian under certain circumstances. The text of the law provides as follows: "'Victim' means a child under the age of eighteen who has been sexually abused or subjected to any other unlawful sexual conduct under chapter 709 [sexual abuse statute] or 726 [incest and child endangerment statute] or who has been the subject of a forcible felony. A professional licensed or certified by the state to provide immediate or short-term medical services or mental health services to a victim may provide the services without the prior consent or knowledge of the victim's parents or guardians. Such a professional shall notify the victim if the professional is required to report an incidence of child abuse involving the victim pursuant to section 232.69." Iowa Code § 915.35(1), (2) & (3); HIV/AIDS Care Iowa Code § 141A.7(3).
- **Substance Abuse Treatment**: Iowa law authorizes a minor to consent to substance abuse treatment. A substance abuse facility or a physician or physician's designee providing substance abuse treatment or rehabilitative services is not required to obtain consent from a parent or guardian prior to providing these services to a minor. Iowa Code § 125.33(1).

Prenatal Care Services

Iowa law does not expressly address whether minors can receive prenatal care services without consent from a parent or guardian. However, federal and state common law and statutes do

DRAFT 4-6-2022

likely authorize a minor to consent to these services without parental consent in the majority of health care settings. Providers with questions about this area of the law are encouraged to contact their own legal counsel for guidance.

DRAFT 4-6-2022

Number: 305
Title: Confidentiality
Effective Date: 10/01/2022
Revision Date:
Date of Last Review:
Authority: Iowa Code chapters 22, 125, 135, 139A, 141A, 144; Contract General Conditions; [45 CFR parts 160 and 164.]

Overview
Every effort is made to ensure client confidentiality and provide safeguards for individuals against the invasion of their privacy. Information about clients that receive services may not be disclosed without the individual's written consent, except as may be necessary for treatment services, payment, or health care operation activities or as required or authorized by law, with appropriate safeguards for confidentiality. Concern with respect to the confidentiality of information, however, may not be used as a rationale for noncompliance with laws requiring notification. Information may be disclosed in summary, statistical or other form that does not identify the individual, with written authorization from IDPH and in conformance with IDPH's Disclosure of Confidential Public Health Information, Records, or Data Policy and all relevant federal and state laws.

As a general rule, public health and medical records which contain personally identifiable information of a health-related nature are confidential under Iowa law. Public health records include a record, certificate, report, data, dataset or information which is confidential under federal or state law.
Data which can be used to indirectly establish the identity of a person named in a confidential public health or medical record by the linking of the released information or data with external information which allows for the identification of such person is also confidential.

The authorized sharing of confidential information can benefit the client or program for purposes such as coordination of care, facilitation referrals, sharing of demographic information, and/or program evaluation.

DRAFT 4-6-2022

Policy
Contractors and their subcontractors shall comply with all applicable federal and state laws and with IDPH policies and procedures to protect client confidentiality and shall assure security of the client information, including electronic files.

Procedure
1. Contractors are required to comply with all applicable federal and state laws to protect client confidentiality and assure security of client information, including but not limited to regulations of the Health Insurance Portability and Accountability Act of 1996 (HIPAA) and subsequent amendments, including Subtitle D of the Health Information Technology for Economic and Clinical Health Act, Title XIII of Division A, and Title IV of Division B of the American Recovery and Reinvestment Act of 2009 (HITECH) and the federal regulations published at 45 CFR parts 160 and 164.
2. See Sections 8, 9, 10, 22, 28 of the Iowa Department of Public Health (IDPH) General Conditions for additional specific requirements related to confidentiality.

3. All information as to personal facts and circumstances obtained by contractors and subcontractors about individuals receiving services must be held confidential and must not be disclosed without the individual's documented consent, except as may be necessary to provide services to the patient or as required or authorized by law, with appropriate safeguards for confidentiality
4. Confidential information may not be shared without a signed authorization for release of information, unless otherwise required or authorized by law. Such records will be disclosed only under circumstances expressly authorized under state or federal confidentiality laws, rules, or regulations. Contractors may be liable civilly, contractually, and criminally for unauthorized release of such information.
5. The Contractor shall immediately report to IDPH any unauthorized disclosure of confidential information.
6. In compliance with Section 2.13.9 of the General Terms for Service Contracts within contract number MED-17-005 (Maternal and Child And Adolescent Health Omnibus), as amended, between the IDPH and the Iowa Department of Human Services (DHS), all terms of contract MED-17-005 shall also apply to successful applicants. Contractors shall ensure that any subcontractors that create, receive, maintain, or transmit protected health information on behalf of the applicant agree to the same restrictions, conditions, and requirements that apply to the Contractor with respect to such information. These terms include, but are not limited to the following.
    a. **Access to IDPH or DHS Confidential Information:** Contractors may have access to confidential information owned by IDPH or DHS that is necessary to carry out the responsibilities of the funding opportunity. Access to such confidential information shall comply with the State, IDPH and DHS policies and procedures. In all instances, access to IDPH and DHS information from outside the United States and its protectorates, either by the contractor or its affiliates or associates or any subcontractor is prohibited.
    b. **Breach Notification Obligations:** The contractor agrees to comply with all applicable laws that require the notification of individuals in the event of unauthorized use or disclosure of confidential information or other events requiring notification in accordance with applicable law. In the event of a breach of the contractor's security obligations or other event requiring notification under applicable law, the contractor agrees to follow IDPH directives, which may include assuming responsibility for informing all such individuals in accordance with applicable laws and to indemnify, hold harmless and defend the State of Iowa against any claims, damages, or other harm related to such breach.
    c. **Business Associate Agreement**: When performing certain activities under the Title V, CAH Program contractors collect and receive access to certain records and pieces of data that are protected by the Health Insurance Portability and Accountability Act of 1996, as amended, and the federal regulations published at 45 CFR part 160 and 164. When the contractor performs services on behalf of IDHP for which IDPH is a business associate of DHS, the contractor agrees to comply with the business associate agreement addendum (BAA) and any amendments thereof, as posted to the DHS website: https://dhs.iowa.gov/HIPAA/baa This BAA, and any amendments thereof, is incorporated by reference. The contractor shall ensure that any subcontractors that create, receive, maintain, or transmit protected health information on behalf

DRAFT 4-6-2022

of the contractor agree to the same restrictions, conditions, and requirements that apply to the contractor with respect to such information.

Resources

- Hospital records, medical records, and professional counselor records of the condition, diagnosis, care, or treatment of a patient are confidential. Iowa Code § 22.7(2).
- Records pertaining to participants in the gambling treatment program are confidential. Iowa Code § 22.7(35).
- Confidentiality of social security numbers. 42 USC 405(c)(2)(C)(viii)
- Personally identifiable information and business identity related to a reportable disease or condition are confidential. Iowa Code § 139A.3; Iowa Code §§ 139A.30 - 32.
- Personally identifiable information related to HIV/AIDS. These reports are maintained as "strictly confidential medical information" and specific provisions prevent disclosure of this information except under very limited circumstances. Iowa Code §§ 141A.6, 141A.9.
- Vital statistics records. Iowa Code § 144.43.
- Substance abuse program patient information and some licensing information. Iowa Code § 125.37; Iowa Code §§ 22.7(2), 22.7(18), or 125.37; 641 IAC 155.16(5).

DRAFT 4-6-2022

Number: 306
Title: Client Referral and Follow-Up
Effective Date: 10/01/2022
Revision Date:
Date of Last Review:
Authority:

Overview
Contractors can support clients' social determinants of health, as well as their mental and physical health by asking about their social history, referring them to local support services, facilitating access to these services, and acting as a reliable resource person throughout the process. “Individuals consciously act to protect and promote their own health and that of others, albeit within structural constraints largely outside their individual control. The pathways people follow as they seek help and support to deal with social problems can be expected to be complex.” Social determinants of health often create inaccessible, fragmented care, long lasting, and inadequate resources for families’ needs. Clients are expected to navigate this complex, fragmented system on their own often without knowing how to find what they need or what is available. (Par8o, 2016)

Families eligible for CAH programs often face precarious living situations, low income from paid work, restricted choices in housing and employment, and social environments full of conflict. CAH clients demonstrate great resourcefulness and persistence in the face of exhausting, demoralizing, and formidable challenges (Popay et al, 2007). Contractors can play a significant role in aiding clients in finding solutions and resources in their community by assisting in making appointments, providing complete, up-to-date information about services in the community and eligibility criteria, advocating for the family and making a well-executed, complete referral with follow up to assure the family received what they needed.

DRAFT 4-6-2022

Policy
Referral for services beyond the scope of the agency is expected. Contractors shall have, by prior arrangement, providers or agencies to which clients may be referred for both social determinants of health and medical homes.

Procedure
- Contractors shall engage in regular communication with providers and resources within the service area to build strong relationships and facilitate effective referral linkages.
- Contractors shall have a planned mechanism for client follow-up to ensure referral needs were met.
- Contractors shall have a robust referral linkage with primary care providers in order to promote medical homes.
    - Contractors, particularly those serving as a medical home or are part of a system that serves as a medical home, shall provide equal or more opportunity for clients/families to choose another organization as a medical home, with equal or more support and assistance, in the form of care coordination, provided if a medical home outside the applicant’s organization or system is chosen by the client/family, including those that may be a competitor.
- Contractors shall build referral networks with local primary care providers throughout the

CSA to increase access to medical homes for clients by providing comprehensive well visits, and screening services for clients enrolled in Title V, clients during the Presumptive Eligibility period and clients enrolled in Medicaid. Contractors must form referral networks that serve all three client populations (Title V, PE, and Medicaid) and must include options for clients enrolled in each Medicaid managed care organization (MCO).

- Contractors shall have a robust referral linkage with providers of client-centered, culturally and linguistically appropriate services related to the social determinants of health.
- Provide specialized care coordination to priority populations as they may need additional care coordination to find a provider that meets their needs.
- Contractor referral protocols shall meet the evidence-based practice for referral systems in that they are safe, effective, efficient, patient-centered, and equitable. Contractors shall have a referral protocol that addresses all of the following:
  - Staff training in making referrals
    - Contractors shall assure staff are trained in asking questions about health and social determinants of health in a culturally and linguistically appropriate way and in a manner that encourages trust, relationship building, and provides a comfortable environment to disclose needs and sensitive information.
    - Health equity should be addressed in contractor policies and procedures. Studies have shown that staff screen patients differently, do not screen patients, and offer different services based on the client's appearance, diagnoses (mental health), insurance status, and perceived or documented income. Emphasis should be on universal screening and the Contractor shall evaluate the process for potential bias.
  - How client needs are determined
    - Staff shall ask clients if they want a referral/assistance
    - Staff shall use motivational interviewing to assess barriers to readiness for assistance
  - How needs are matched with available services
    - Staff shall ask clients what they are looking for in the referral provider/service - what is important to them (location, race/ethnicity of provider, language spoken).
  - How to identify available community services
    - Develop a comprehensive list of resources for each referral type in order to provide clients with specific details about the provider
  - How the client is connected to community services
    - Ask the client how they would like the referral to happen - staff make a connection with the agency on the client's behalf, be introduced to a staff member at the agency, make the appointment for the client, have the agency contact the client to arrange an appointment.
    - Assess barriers to accessing community services
    - Provide specific information to the client about the referral, including what to expect, required documents, eligibility guidelines, and other helpful information about accessing services.

DRAFT 4-6-2022

        - A list of possible services/providers with no additional information on qualifications, if taking new clients, insurance accepted, etc. given to a client is not a referral (Resource directory, food pantry list, clinics/health care provider list, child care provider list, etc.)
        - Work with providers/community services to determine what is needed to ensure the referral will be beneficial to the client.
        - Contractors are encouraged to work closely with their referral network to set roles and responsibilities for each organization, create tools, forms and/or protocols/procedures for evidence-based mutual referrals (listed above safe, timely, etc.) to prevent patients from falling through the cracks, getting referred to services that don't meet their needs or they are ineligible for ("run around") and delays in service.
    - How and when follow-up after the service will be conducted. Contractors are encouraged to close referral loops and request the same from their referral network, by communicating the status and result of referrals with appropriate releases of information/client consent.
    - How the referral is documented.
- Also see the Interpreter Services policy for ensuring individuals have access to culturally and linguistically appropriate referral services.
- Contractors shall maintain a system of referral and follow-up
    - Develop a system to assure that client follow-up is completed and documented.
    - Provide follow-up of canceled or missed appointments, and reschedule initial and return appointments.
- Contractors shall provide assistance in rescheduling missed or canceled appointments and working with providers and clients when missed appointments, outstanding balances and other barriers are preventing access to care.
- Contractors shall provide assistance in scheduling initial and return appointments for Medicaid covered services and social determinants of health.
- Contractors shall periodically assess the effectiveness of their referral process.
- Contractors are encouraged to track referrals in the MCAH data system.
- Contractors shall develop and annually review a county specific resource directory for clients/families. The development and annual review of the resource directory should include clients/families. The resource directory must meet the following criteria:
    - Include county level resources for the county of residence of the client/family. The Contractor may opt to include regional, state, and national resources.
    - Contain medical and dental providers taking Medicaid clients in the client's/family's county of residence.
    - All resources must be verified by the contractor at the time of review. Resources must include pertinent information such as location, hours of operation, and contact information, but should strive to provide more detailed information (e.g., Food Pantry: fresh fruit is available on the first Tuesday of the month, food often runs out by noon; Provider X speaks Spanish, etc.).
    - Contains information relevant to the health and social determinants of health (SDOH) for clients age birth to 21 years. Do not include a listing of businesses/organizations in the county that do not offer health/SDOH services to

DRAFT 4-6-2022

CAH clients, the listings shall be relevant to the clients/families this program serves.

DRAFT 4-6-2022

Number: 307
Title: Information Technology Requirements
Effective Date: 10/01/2022
Revision Date:
Date of Last Review:
Authority: General Conditions, OCIO Information Technology Standards, DHS Terms for Service Contracts

Overview
The contractor must meet electronic requirements to maintain secured connectivity to support program activities.

Policy
Contractors must comply with and adhere to the Office of the Chief Information Officer (OCIO) State Information Technology Standards, IDPH Special and General Conditions, and DHS standards related to information technology.

Procedure

- Contractors shall comply with the State Information Technology Standards. Current State Information Technology Standards are accessible online at the OCIO website at https://ocio.iowa.gov/standards.
- Contractors shall provide work owned and maintained electronic devices (phones, computers, etc.), removable media, and other devices needed to complete the work of the CAH program. Contractor staff and subcontractors may not use personal devices for any CAH program work.
- Protected Health Information (PHI) shall not be uploaded into the IowaGrants system.
- Contractors shall have an IBM compatible computer with a i5 2.3 GHz Processor, a minimum of 8 gigabyte (GB) of RAM, and 256 GB hard drive.
- Minimum required software includes each of the following:
  - Anti-virus software with current updates
  - Latest versions of Adobe Reader and Internet Browser (I.E., Chrome, Firefox, etc.)
  - Microsoft Windows 10 and current updates
  - Microsoft Office 2016 Standard or more recent
- Contractors must maintain a high-speed Internet connection of at least 7 MB Bandwidth, unless not available in the agency's service delivery area.
- Adequate bandwidth for reliable operation at all work sites.
- Contractors must provide local computer support and maintenance of local hardware, operating software, and networking systems. Contractors must have their service agreement on file if contracting for local computer support.
- Contractors shall notify IDPH prior to upgrading or transferring computers.
- Contractors shall maintain individual email addresses and the capacity to send and receive electronic communications (email and attachments) for all required positions listed on the Key Personnel Form.
- Contractors shall have the ability to generate encrypted emails for sending confidential information and shall encrypt all emails containing confidential information.

DRAFT 4-6-2022

Number: 308
Title: Contracts and IowaGrants.gov
Effective Date: 10/01/2022
Revision Date:
Date of Last Review:
Authority: Iowa Administrative Code 641 IAC 76.9 (135)

Overview
Contracts are issued to successful applicants to provide public health services at the community level for child & adolescent health (CAH).

Policy
Contractors must execute a signed contract issued by the Department in order to provide CAH services. All contract documents and associated documents shall be maintained in IowaGrants.gov per the provisions of the contract.

Procedure

- When a contract has been executed (signed by both the applicant and IDPH) the contractor adopts the provisions and requirements set forth in the RFP for the project period. The contractor also adopts the provisions and requirements of each subsequent RFA and corresponding contract in the project period.
- The contract includes both general conditions and special conditions.
    - The general conditions apply to all contracts issued by the Department. The Department general conditions are located on the IDPH website at https://idph.iowa.gov/finance/funding-opportunities/general-conditions.
    - The special conditions are specific to the program covered by the contract. All CAH contract agencies and their subcontractors are required to follow both sets of conditions.

The IowaGrants.gov website is used for the RFP/RFA process and execution, management, and monitoring of documents for Department service contracts. After a CAH contract is awarded, a specific and unique grant site is established for the contractor on the face page of the contract. Documents maintained within the contractor's secure site include, but are not limited to, the approved application, service contract and associated amendments, claims and support documentation, and any additional contractually required reports. The contractor has the responsibility to ensure appropriate individual(s) have registered within the IowaGrants system.

DRAFT 4-6-2022

Number: 309
Title: Subcontracting
Effective Date: 10/01/2022
Revision Date:
Date of Last Review:
Authority: Iowa Administrative Code 641 IAC 76.9 (135), General Conditions

Policy

The contractor is permitted to subcontract for the performance of certain services required under the contract. Subcontracts must adhere to the provisions of Section 5(b) of the IDPH General Conditions as posted on the IDPH Web page at https://idph.iowa.gov/finance/funding-opportunities/general-conditions.

The contractor is fully responsible for all work performed by subcontractors. No subcontract into which the contractor enters into with respect to performance under the contract will, in any way, relieve the contractor of any responsibility for performance of its duties.

Procedure

- Subcontractors that enter into an agreement with the contractor must follow the same state and federal laws, regulations, and policies required of the contractor.
- Current individual employees of the State of Iowa may not act as subcontractors under this contract.
- If the subcontract is over $2,000, it must be approved by IDPH in writing and in advance of execution of the subcontract.
- The contractor is responsible for ensuring the compliance of the subcontractor. The subcontract must include personnel training, documentation requirements, record retention, payment for services rendered, and ongoing communication of regulations.
- If a contractor exchanges personnel services with another entity, a written legal agreement describing the exchange is required. At a minimum, the agreement should address the scope of work to be performed, assurance of qualified personnel, financial exchange, reporting requirements, and time period.
- The subcontractor must report all program income generated by the subcontract to the contractor. The contractor is required to report the program income balance of subcontracts on a monthly basis to IDPH.
- The contractor and subcontractor must execute a subcontract every year during the project period following review by IDPH. The contractor must maintain written documentation regarding the annual subcontract and have the documentation available for IDPH review.

DRAFT 4-6-2022

Number: 310
Title: Contract Revisions & Program Changes
Effective Date: 10/01/2022
Revision Date:
Date of Last Review:
Authority: 641 IAC chapters 76, 77, 80

Overview
All parts of a contractor's final, approved grant application become part of the contract between the contractor and IDPH. All contract budgets, activity work plans, service delivery forms, and program documents are transferred into the contractor's grant site as "Components" in IowaGrants. Any program changes require revisions to program components.

Consultants are available to provide technical assistance and consultation to contractors. Requests for assistance can be made verbally or in writing. Technical assistance (TA) can guide contractors in the following areas:

- Clarifying program requirements and sharing program expertise.
- Strengthening the ability of contractors to fulfill the goals of the CAH program by identifying, exploring, or prioritizing issues.
- Sharing best practices, evidence-based practices, and promising practices
- Identifying or sharing resources and data
- Addressing funding or billing issues
- Addressing quality assurance and/or quality improvement initiatives. Providing advice and independent, objective perspectives to try to resolve problems or facilitate change.

DRAFT 4-6-2022

Policy
Contractor shall comply with all requirements and complete all activities outlined in their final, approved grant application. Any necessary changes must be approved by IDPH prior to implementation.

Procedure
Any program changes require a revision to the corresponding "Component" via the IowaGrants negotiation process. The technical instructions for this process are found at http://idph.iowa.gov/finance/funding-opportunities/iowagrants.

The formal request for approval of program changes must be submitted in writing in IowaGrants.gov, and approval by IDPH must be granted prior to changes being implemented. The procedure for requesting a program change is as follows:

1. The contractor will submit a request through the IowaGrants Correspondence component to the appropriate consultant(s) to negotiate a specific grant component, along with a brief description of the requested program change.
2. The consultant or contract manager will negotiate the grant component to the contractor.
3. The contractor will make the proposed changes in the grant component and submit.
4. The consultant or contract manager will review the proposed changes and accept the changes or provide feedback to the contractor ('renegotiate' the component back, if necessary).

5. A correspondence may be sent to the contractor from the consultant or other directed staff to notify the contractor of the request status and/or to initiate the contract amendment process if necessary.

DRAFT 4-6-2022

Number: 311
Title: Equipment and Inventory
Effective Date: 10/01/2022
Revision Date:
Date of Last Review:
Authority: Iowa Administrative Code 641 IAC 76.9 (135), General Conditions

Overview
The IDPH general conditions define equipment as any item costing $5,000 or more and having an anticipated life of one year or more (source: IDPH website at https://idph.iowa.gov/finance/funding-opportunities/general-conditions).

Policy
If a contractor desires to purchase equipment that was not approved as part of the current application budget line item, a letter requesting permission for the purchase must be sent prior to purchase to the Department. Grant funds may not be used to purchase motor vehicles.

Procedure
- The letter requesting permission for the purchase must be sent prior to purchase to the IowaGrants Correspondence component.
- Upon IDPH approval of the request to purchase equipment and within one month of purchase, the contractor must complete and submit an Equipment Acquisition Form through IowaGrants Correspondence.
- The Equipment Acquisition Form can be found at https://www.idph.iowa.gov/Bureau-of-Family-Health/MCH-Portal/General-Title-V-tools
- The Equipment Acquisition Form should include the following items:
    - Description of the equipment to be added
    - Vendor name
    - Purchase price
    - Manufacturer's serial number (if applicable)
    - State tag number (or contractor inventory number if no state tag has been assigned)
    - Percentage of total cost of item paid for by Department funds and program income
    - Physical location of item
    - Date of acquisition
- The request for reimbursement for the equipment purchased must be included in a monthly claim and supporting documentation in IowaGrants.
- IDPH maintains inventory of each contractor's fixed assets (A fixed asset is a long-term tangible asset that a contractor owns and uses and is not expected to be used or sold within a year).
- IDPH inventory listings are reconciled annually with the contractor's inventory.
- The Bureau of Family Health (BFH) will conduct an inventory audit in conjunction with the bi-annual administrative on-site review. All or a sampling of the equipment listed on the IDPH electronic inventory will be required to be accounted for upon request.
- Disposal of property purchased in whole or in part with grant program funds requires prior written authorization of the BFH. Authorization for disposal must be obtained

DRAFT 4-6-2022

regardless of the method of disposal (i.e., donated, sold, traded-in, and discarded). A written request to dispose of property must be sent through the IowaGrants Correspondence.

- The contractor may request to delete equipment from their inventories if the equipment has been lost, stolen, broken, is obsolete, or no longer meets the definition of equipment as defined in this policy. The contractor must send a written request through the IowaGrants Correspondence. The written request must clearly identify the reason for removal.
- If approved, the Department will send a written approval through the IowaGrants Correspondence component to the contractor.

DRAFT 4-6-2022

Number: 312
Title: Request for Exception to Policy
Effective Date: 10/01/2022
Revision Date:
Date of Last Review:
Authority: Iowa Administrative Code 641 IAC 76

Overview
Program requirements and performance standards are in place to maintain the quality of services, protect the public, and to assure the proper use of public funds.

Policy
Contractors not in compliance with all Title V requirements and additional state requirements as part of the contract may file a written request for a temporary exception to policy. An exception to policy shall not constitute a waiver of any terms and conditions of the contract. It is within IDPH's sole discretion whether to grant an exception to policy. A determination to grant an exception to policy does not affect the rights of IDPH to pursue any remedies under the contract or otherwise available under law.

Procedure
1. The request must be sent through IowaGrants.gov correspondence.
2. IDPH reserves the right to specify the format for reporting. In the absence of a prescribed format, the contractor shall include the following components in the request:
    a. Executive director shall submit the request;
    b. Statement of the requirement for which the request for exception is being made;
    c. The rationale for failure to meet the requirement;
    d. The time period for which the exception is requested; and
    e. A remediation plan to meet the requirement.
3. The exception to policy may be written for up to one year, unless a different time limitation is stated in the requirement and granted by IDPH.
4. An extension to an approved exception to policy may be granted only under limited circumstances upon a showing of substantial progress towards compliance. The extension request shall include the rationale for extension and the progress made to date on the remediation plan.
5. Failure to request an exception to policy to a contract requirement prior to the anticipated noncompliance may result in the reduction or elimination of funding or the enforcement of other remedies authorized by the contract.
6. Failure to demonstrate satisfactory progress on the remediation plan may result in the reduction or elimination of funding or the enforcement of other remedies authorized by the contract.
7. It will be the decision of the Department whether the exception will be granted. The decision will be entered into IowaGrants.gov within 30 days of the request.

Number: 313
Title: Review and Approval of Informational and Education Materials
Effective Date: 10/01/2022
Revision Date:
Date of Last Review:
Authority: IAC 641-76

Policy

The development and translation of informational and educational materials, marketing materials, advertising, and communications shall be reviewed and approved by the Department prior to the contractor's final development or reproduction. This policy applies to the following, including but not limited to: presentations, verbal reports (public service announcements), publications (pamphlets, journal articles, reports, books, teaching guides, brochures), press releases, audiovisuals (posters, slides, video clips, film), or other marketing, advertising and informational materials. Any modifications to materials previously approved by the Department must be re-submitted for approval. Materials developed for the CAH program and/or using federal and/or state dollars are generally in the public domain.

Procedure

- The following are considerations when drafting or reviewing materials:
    - The educational and cultural backgrounds of the individuals to whom the materials are addressed.
    - Whether the material is suitable for the population or community to which it is to be made available.
- All informational and educational materials developed by the program shall cite Title V or Medicaid Administrative Funds (informing, PE, care coordination) as contributing to the development of the materials. Language should include the following:
  *This publication was made possible by grant number (**i.e., xxxxxxxxxxxxx**)*
- Contractors must review all print materials distributed and posted to ensure reflection of a variety of individuals including different cultures, ethnicities, genders, ages, sexual orientations, etc. Contractors must assure printed materials distributed are culturally and linguistically appropriate.
- Materials may not be copyrighted, patented, or trademarked by the Contractor. All materials developed using state or federal funds as part of the CAH program are generally public domain, and shall be shared free of charge or at the cost of printing/sharing with the Department, other CAH contractors, and other entities requesting to use the materials to promote the health of families.

Number: 314
Title: MCAH Data Sharing
Effective Date:
Revision Date:
Date of Last Review:
Authority:

Overview
This policy lays out the expectations of the contractors for compliance with access, use, release, and sharing of data.

Policy

- Contractors shall ensure that client personal identifiable information remains strictly confidential.
- Contractors shall ensure that when accessing, using, releasing and sharing data from the MCAH data system, all employees, staff, agents, and subcontractors comply with the IDPH data sharing agreement (DSA) Policy #CO 01-16-001, IDPH Research Agreement and Research and Ethics Review Committee Policy # AD 07-12-004, IDPH Disclosure of Confidential Public Health Information Records or Data Policy #CO 01-16-002, the Release of Information and Confidentiality of Records and Data Section within the IDPH General Conditions, DHS General Terms for Service Contracts, and any future revisions to any of these.
- All data in the MCAH data system relating to clients enrolled in Medicaid is covered by the Contract Number MED-17-005 (Maternal and Child and Adolescent Health Omnibus). Contractors shall ensure that any access, use, release and sharing of the data complies with the terms and conditions within Contract Number MED-17-005 (Maternal and Child And Adolescent Health Omnibus), as amended, between the Iowa Department of Public Health and the Iowa Department of Human Services, including the Business Associate Agreement available on the Iowa DHS website here: http://dhs.iowa.gov/HIPAA/baa.

DRAFT 4-6-2022

Procedure

1. Contractors shall use data only for the purposes outlined within the contract and shall ensure that the minimum number of individuals has access to the information, as necessary, to complete program work.
2. All information as to personal facts and circumstances obtained by the project staff about individuals receiving services must be held confidential and not be disclosed without the individual's documented consent, except as may be necessary to provide services to the patient or as required or authorized by law, with appropriate safeguards for confidentiality. Contractors are authorized to disclose identifiable data as necessary to comply with reporting laws, including laws requiring notification or reporting of child abuse, child molestation, sexual abuse, rape, incest, intimate partner violence, human trafficking or similar reporting laws. Unless authorized or required by law to disclose confidential information, contractors may disclose information only in summary, statistical or other form, which does not identify particular individuals and which complies with all applicable laws and policies.

3. Contractors may only release their own agency MCAH data in aggregate reports. No identifiable data may be released at any time. Identifiable data includes information that can directly or indirectly be used to establish the identity of a person, such as a name, address or other information that can be linked to external information that allows for identification of the person. Aggregate data should generally not be reported if the count size or numerator is fewer than six or if the denominator is fewer than 100. Any release of MCAH data by contractors shall comply with all relevant federal and state laws and with IDPH Disclosure of Confidential Public Health Information Records or Data Policy #CO 01-16-002.
4. Any subcontracted entity hosting or maintaining clinical records or identifiable data and all IT staff with access to confidential or protected information must attest to the requirement of these safeguards in contract, Business Associate Agreement or an attestation document. Copies of the appropriate documentation will be available for review by IDPH staff.
5. All other requests received for the MCAH data system will be referred to IDPH.
6. Contractors shall immediately report any suspected unauthorized disclosure of confidential information to IDPH.

Documentation:

1. Contractors must submit new user forms to request access for new staff members and must submit a deactivation form when a staff member leaves employment.
2. Each user must electronically sign the confidentiality agreement within the data system before utilizing the system.
3. If data is downloaded from the system, rerelease must follow the guidelines above, the download must be deleted from the download section of the device used to download the data and if data is transferred for purposes of providing services such data shall be sent securely/encrypted.
4. Contractors will ensure that a consent and release form is signed and on file at least once per year for each client served.

DRAFT 4-6-2022

Number: 315
Title: Telework
Effective Date: 10/01/2022
Revision Date:
Date of Last Review:
Authority: Office of Chief Information Officer (OCIO) information technology standards.

Overview

Telework can be a valuable tool in serving the needs of Title V CAH clients and families. Contractors are to review the appropriateness of telework in their service area, for their employees, and clients/families.

Policy

- Contractor shall have policies and procedures that outline confidential, secure, and appropriate guidelines for telework sites that comply with all state and federal laws, contract special and general conditions and Office of Chief Information Officer (OCIO) information technology standards.
- Contractor shall ensure that technology and work space are confidential, secure and appropriate for the work being completed at the telework site.
- Contractor shall have policies and procedures that outline confidential, secure, and appropriate guidelines for teleworking and providing health care services from an approved telework site.

DRAFT 4-6-2022

Procedure

Approved Telework Sites

- Personal electronic equipment, mobile devices, computers, and removable storage devices may not be used. All equipment used to perform MCAH work and services must be work-issued and comply with all OCIO and contract conditions.
- Contractor staff must use a secure internet connection and/or Virtual Private Network (VPN), hotspot or other secure internet connection. Staff shall not connect to unauthenticated public Wi-Fi networks or networks using WEP and WPA (e.g., public Wi-Fi connections at hotels, restaurants, libraries, etc.).

Provision of Work from an Approved Telework Site

- Contractor staff must have a private space designated for the delivery of services where conversations cannot be overheard or documents/documentation viewed by others not employed by the agency. Common areas of the home or a room shared with someone not employed by the agency would not comply with this policy.
- Contractor staff cannot provide HIPAA compliant health care services (including informing, care coordination, presumptive eligibility and direct care services) while also actively supervising children or vulnerable adults, (e.g., door open to hear/see children play).
- Contractor policies shall outline any work that may be done while actively supervising children or vulnerable adults.

- Staff training shall be provided with expectations for providing professional and health care services while teleworking.
- Contractor policies and procedures for providing services from an approved telework site shall contain information to assure staff have the resources needed to respond to and meet client needs when not present with client.
- Contractors shall ensure that all Contractor technology meets HIPAA requirements. The Department may request documentation of HIPAA compliance during a site visit, audit or at any time.

Number: 316
Title: **Child and Adolescent Health Appointment System**
Effective Date: 10/01/2022
Revision Date:
Date of Last Review:
Authority:

Policy

Title V direct care services shall be provided in a manner that meets the needs of families in the priority populations, considers the social determinants of health (primarily low socio-economic status), and promotion of health equity.

Procedure

1. Clients or parents/primary caregivers of clients who are CAH Program/Medicaid eligible and have used services in the past 2 years, and those eligible in the past 2 years for CAH Program/Medicaid but have not used services shall be included in the development of appointment policies and procedures.
2. Clients or parents/primary caregivers of clients representing priority populations shall be included in the development of appointment policies and procedures.
3. Appointment systems shall be patient-centered.
4. Appointment systems shall be customized according to client needs and values. The client should be the source of control and the client's needs anticipated and accommodated.
5. Contractors shall not charge for missed CAH services, nor refuse nor restrict CAH services to a client due to missed appointments or unpaid bills. Instead contractors shall provide enabling and support services to assist clients in accessing CAH services, including but not limited to assistance with accessing health insurance, assistance with transportation, reminder/recalls and care coordination as part of the direct care service.
6. When a client arrives late or at an incorrect time for an appointment the client shall be treated with compassion, flexibility and collaboration. Every reasonable effort shall be made to provide the service to the client the day and time they arrive. If the client cannot be accommodated when they arrive, the contractor shall provide enabling and support services to assist the client in accessing the CAH service at another time convenient to the client.
7. Contractors should consider online scheduling, home visits and other models for scheduling and providing services that meet the needs of clients.
8. Contractors should provide direct care services outside 8:00-5:30 Monday through Friday.
9. The presence of individuals accompanying the client in the appointment shall be geared toward the benefit of the client. Recognizing that lack of access to child care is a social determinant of health affecting access to health care, undue restrictions on the presence of siblings or other children shall not be imposed.
10. Contractor shall provide a safe, comfortable waiting area for family members, including young children.

DRAFT 4-6-2022

11. Adolescents and adults shall be offered time alone during the appointment with the service provider if accompanied by a parent, guardian, caregiver, spouse, friend or significant other.

DRAFT 4-6-2022

Number: 317
Title: Client and Family Input
Effective Date: 10/01/2022
Revision Date:
Date of Last Review:
Authority:

Policy
Contractors shall include client and family input in programming planning, implementation, and evaluation.

Procedure
- Contractors are encouraged to follow the best practice of developing a contract or scope of work outlining duties and compensation for family members, clients and/or youth providing lived experience and their expertise. In obtaining client and family input, contractors shall ensure compliance with relevant federal and state laws and shall ensure such activity does not create a conflict of interest.
- Contractors are encouraged to follow the best practice of compensating clients and families for ongoing work and advisory work. CYSHCNet recommends that payments begin at a rate of $25 per hour with a $100 minimum payment. Title V grant funds and Medicaid Administrative Funds (MAF) may be used for this type of compensation.
- Contractors shall include both individuals/families utilizing CAH program services or have used services in the past two years, and those who are eligible but not receiving services in providing input.

DRAFT 4-6-2022

Levels of Engagement		
Category of Engagement	**Expectations**	**Method of Compensation**
Increasing levels of community involvement, impact, trust and communication		
Participation		
Outreach	• Communication flows from the program to inform community members • Optimally established communication and outreach channels, while sharing information with the community	Incentives- a meal, gift cards, contractor provides a service for community
Speaker	• Clients & families invited to speak at a conference or meeting.	A stipend or honorarium is appropriate
Consultation	• Community members provide one-time or periodic feedback • Develops connections that may be able to grow into deeper levels of participation	A stipend is appropriate
Increasing ownership, empowerment, opportunities and supports for both staff and community		

Engagement		
Involvement	• Clients & families have time-limited contact with the project, for example, reviewing survey questions, reviewing/developing documents, reviewing/developing policies, conducting key information interviews, participating in one-time or periodic advisory committee meetings. • Clients & families act as facilitator or co-facilitator of a focus group. • Clients & families may be part of a group of individuals serving in similar roles, such as on an advisory committee.	A stipend is appropriate. Compensation should be consistent for all members of the group doing the similar work.
Collaborate	• Clients & families have an ongoing relationship with the project, but are not employees • Having an ongoing relationship means that s/he is participating on a regular basis, which may include attending regular meetings, engaging in scheduled tasks such as survey development, data collection, participant recruitment, and others • Clients & families may work on an hourly basis or on contract and may require a 1099 form, scope of work or other documentation for the organization.	A contract is appropriate, based on an hourly rate or on a per-job basis
Partnership		
Shared Leadership	• Decision-making, power, and responsibility are shared. • Development and structure of agenda, programs and planning depend on client/family involvement. • Clients & families regularly review outcome data to inform decision-making.	A contract is appropriate, based on an hourly rate or on a per-job basis

Number: 318
Title: Child Care Nurse Consultant (CCNC) Services
Effective Date: 10/01/2022
Revision Date:
Date of Last Review:
Authority: Child Care Nurse Consultant Role Guidance: To Achieve Performance Measures and Annual Performance Standards, Child Care Health Consultant Competencies

Overview

In May 2019 the National Center on Early Childhood Health and Wellness (NCECHW) released Child Care Health Consultant (CCHC) Competencies. NCECHW is a collaborative effort between the Office of Head Start, the Office of Child Care and the Maternal and Child Health Bureau. In Iowa, CCHCs are licensed registered nurses with specialized training and are identified as CCNCs. Healthy Child Care Iowa (HCCI) provides structure and fidelity for CCNCs at the local level. CCNCs are part of the CAH team.

Policy

Contractors shall provide CCNC services that adhere to the national Child Care Health Consultant Competencies and CCNC processes for technical assistance, health and safety assessments and care planning for children with special health needs as outlined in the Child Care Nurse Consultant Role Guidance.

DRAFT 4-6-2022

Required Resource for Implementation

Child Care Nurse Consultant Role Guidance

Procedure

- The CCNC collaborates with Early Care and Education (ECE) programs to improve the quality of their health, safety, and wellness practices:
    - The CCNC reviews the DHS child care database (Kindertrack) to identify ECE programs in the service area and offers CCNC services.
    - The CCNC reviews DHS compliance reports to aid in providing consultation and technical assistance (TA).
    - The CCNC conducts and documents health and safety assessments using HCCI program and DHS quality rating system approved tools, forms, and reports.
    - ECE program requests for Iowa Quality for Kids CCNC assessment tools must be scheduled within 3 weeks of the request.
    - A Business Partnership Agreement is completed and a copy is placed in the ECE chart along with documentation of services provided for ECE programs participating with the CCNC.
    - Contractors collect CCNC performance measure data and report annually in IowaGrants.
    - Contractors determine the length of time that records are kept per agency record retention policy and at minimum General Conditions Section 9 of the CAH contract.
- The CCNC collaborates with ECE programs and families to support the care and inclusion of children with special health care needs for equitable access to child care:

- When identified or requested by the ECE program, the CCNC assists in the development of care plans/action plans collaborating with the child's health care provider.
  - When consulting and care planning, a signed consent is required from the child's parent or guardian.
  - The child's care plan/action plan is signed by the child's health care provider and parent or guardian.
  - The CCNC may contact the Area Education Agency (AEA) and/or Iowa Child Health Specialty Clinic (CHSC) as appropriate (with consent) to assist with the child's care plan.
  - The CCNC role in assisting with care planning is to provide collaboration, TA, and training for the ECE provider/staff on the specifics of the plan for safety. The CCNC role is not a delegation of duties.
- The CCNC identifies and implements health education and helps ECE programs safely manage medication administration:
  - The CCNC provides HCCI DHS approved training in the CCNC service area.
  - All DHS approved trainings provided by the CCNC are to be posted on I-PoWeR (Iowa's Early Childhood and School Age Professional Workforce Registry) coordinated with an approved training entity (CCR&R, ISU Extension and Outreach, Head Start, Iowa AEYC, etc.)
  - The CCNC is required to provide a minimum number of *Medication Administration Skills Competency* trainings and *Skills Competency Evaluation* (test-out) in the CCNC service area.
  - The CCNC provides ongoing Skills Competency re-assessment every 2 years through the course's 5 year approval period for ECE programs/staff.
  - The CCNC assists programs with policies regarding safe medication storage.
- The CCNC helps ECE programs prepare for, respond to, and recover from emergencies/disasters including communicable disease outbreaks:
  - Utilize Iowa specific resources available when providing consultation on emergency preparedness planning.
  - The Iowa Statewide Child Care Emergency Preparedness and Response Plan includes HCCI responsibilities and lists CCNC services as a referral resource.
  - The CCNC provides consultation and TA to ECE programs on management and response to infectious disease outbreaks.
  - Contractors shall follow guidance documents and instructions by IDPH CADE and/or local public health authority pertaining to communicable disease.

DRAFT 4-6-2022

Number: 401
Title: Financial Accountability
Effective Date: 10-1-2022
Revision Date:
Date of Last Review:
Authority: 45 CFR 96, 45 CFR 92, 45 CFR 74, IDPH General Conditions

Policy

The contractor shall comply with the IDPH General Conditions, as well as the MCAH financial accountability requirements for contract requirements, and cost allocation plan.

Procedure

Contract Requirements: The contractor is expected to comply with the following financial accountability contract requirements:

- Written financial policies and procedures including, but not limited to:
  - Supply distribution
  - Purchasing, bidding, and selection
  - Check writing and control
  - Billing
  - Accounting/bookkeeping
- Expenditure controls to prevent over-billing of annual budgets
- Valid, approved time records for project staff and volunteers that clearly indicate the amount of time the individual spends in each program area. Continuous daily time studies are required. All volunteer time used for match must be fully documented and approved by the individual whose time is used for match.
- Use of generally accepted accounting principles
- An independent financial audit completed annually. This requirement is applicable to subrecipients of federal funds who are required to have an audit made in accordance with the provisions of Office of Management and Budget (OMB) Circular 2 CFR 200: Uniform Administrative Requirements, Cost Principles, and Audit Requirements for Federal Awards.
- Required Accounting Records including:
  - **Cash receipts register:** The cash receipts register lists each receipt of cash or check with date received, payer's name, brief description, amount received, and account credited.
  - **Cash disbursements register:** The cash disbursements register lists each disbursement in check number order with date paid, payee, check number, amount paid and account charged.
  - **General ledger:** The general ledger summarizes the monthly postings from cash receipts and cash disbursements registers by general ledger account, with adequate identification of expenses by each grant or contract.
  - **Journal entries:** Journal entries contain explanations and amounts of any adjustments to the general ledger accounts.
  - **Chart of Accounts**: A listing of the accounts available in the general ledger in which to record entries.

DRAFT 4-6-2022

- **Payroll time reports**: Time reports show the hours worked on each funded program or grant and total individual effort. Records must be broken out by funding source on each time report.
- **Payroll register**: The payroll register lists for each employee: gross pay, federal and state tax withheld, other amounts withheld, net pay, and check number for each paycheck. Note: The payroll register may be included in the cash disbursements register at small agencies.
- **Individual earnings records:** Individual earnings records list cumulative remaining during the year for each employee.

- Expense documentation: The contractor and subcontractor must keep the following documents on file.
  - Bank statements and canceled and voided checks
  - Invoices and bills for purchases of supplies, equipment, telephone utilities, services, etc.
  - Travel claims with receipts for commercial transportation, meal, and lodging costs reimbursed to employees
  - Time reports and payroll registers
  - Copies of leases for office equipment and vehicle rentals
  - Tax deposit receipts for withholding tax payments
  - Copies of monthly and final expenditure reports submitted to IDPH
  - Copies of contracts, budgets, amendments, and all related correspondence from IDPH
  - Documentation of the methodology used for the allocation of costs
- Internal control system established by management that is designed to provide reasonable assurance regarding the achievement of objectives in the following categories:
  - Effectiveness and efficiency of operations
  - Reliability of financial reporting
  - Compliance with applicable laws and regulations

DRAFT 4-6-2022

Accountability Procedures: The following accountability procedures must be followed:
- Expenditures paid by check should be made using pre-numbered checks.
- All receipts (cash and checks) are listed individually and deposited in the bank account intact and timely.
- Bank reconciliations should be prepared monthly and reviewed and approved by a person who is not responsible for receipts or disbursements.
- If one individual has control over all cash functions (receiving funds, making deposits, reconciling bank statements, making payment, preparing payrolls), the employee must be bonded.
- If the contractor has more than one program, a plan for the allocation of costs must be established to indicate how costs are distributed equitably to each program. Formal accounting records that will substantiate the propriety of eventual charges will support all

costs included in the plan. The allocation plan should cover all joint costs of the contractor. This includes costs to all programs of the contractor, which are to be included in costs of federally sponsored programs.

Cost Allocation Plan: The Cost Allocation Plan must contain the following:
- The nature and extent of services provided and their relevance to the program
- The items of expense to be included
- The methods to be used in distributing costs
- An annual review of the plan and necessary revisions

Resources: Office of Management and Budget (OMB) Circular 2 CFR 200: Uniform Administrative Requirements, Cost Principles and Audit Requirements for Federal Awards.

DRAFT 4-6-2022

Number: 402
Title: Budget Revisions
Effective Date: 10/01/2022
Revision Date:
Date of Last Review:
Authority: Contract General Conditions

IDPH IOWA Department of PUBLIC HEALTH

Policy
The CAH Program budget is part of the contract between the contractor and IDPH. The budget is developed in accordance with the RFP or RFA of the corresponding fiscal year. Contractors must notify IDPH of any contract changes by the due date listed in the contract. If no due date is specified in the contract, the contractor must obtain approval for budget revisions by the last business day in September.

Procedure

Revisions Requiring Prior Written Approval:

1. Prior written approval is required for a budget revision under the following conditions:
    a. Any change in a line-item cost specifically identified in the Special Conditions of the contract as being restricted.
    b. The opening of any line item not in the approved budget.
    c. The purchase of equipment costing $5,000 or more and possessing a useful life expectancy of greater than one year. Equipment and/or supplies costing less than $5,000 may be purchased without prior approval from IDPH (per General Contract Conditions).
    d. Expenditure variance of more than ten percent (10%) cumulatively of the program budget amount (CAH, HCCI, Hawki, CH-dental, I-Smile™, I-Smile™@School). At no time will a specific program be over-expended. Budget categories are identified in the most current RFP and RFA documents.
2. Requesting a budget revision will be done within IowaGrants, the process is as follows:
    a. The contractor will submit a request through the IowaGrants Correspondence component to the appropriate consultant(s) and contract manager to negotiate the budget component, including the program(s) being revised, the dollar amount, and a brief description of the budget change. If the requested revision reduces the amount on the contract face sheet, provide the proposed total. Budget revisions initiated on the part of the contractor that increase the amount of the total grant funds will not be accepted unless previously approved or requested by IDPH.
    b. The Department will negotiate the budget component to the contractor.
    c. The contractor will make the proposed changes in the budget component and submit.
    d. The Department will review the proposed changes and accept the changes or provide feedback to the contractor ("renegotiate" the component).
    e. A correspondence may be sent to notify the contractor of the request status and/or to initiate the contract amendment process if necessary.

DRAFT 4-6-2022

Number: 402
Title: Budget Revisions
Effective Date: 10/01/2022
Revision Date:
Date of Last Review:
Authority: Contract General Conditions

Revisions Not Requiring Prior Written Approval:

1. Routine budget revisions are those that do not substantively change the program plan.
    a. Routine budget revisions include such items as changing cumulative program budget line item amounts of less than 10% of the total budget amount for a program.
    b. Revising the ‘other funds’ categories.
    c. Changing a single category of personnel of less than .20 FTE, unless this will take the staff person under a required FTE.
2. Prior approval from the Department is not required for routine budget revisions, however, routine budget revisions must be recorded in the approved budget and in the expenditure workbook.
3. The contractor must notify the Department in writing with the explanation of the change and the corresponding revised budget pages.
4. Year end expenditures will be compared against the revised line item amount.

DRAFT 4-6-2022

Number: 403
Title: Program Income
Effective Date: 10/01/2022
Revision Date:
Date of Last Review:
Authority: Contract General Conditions

Overview

Program income is defined as gross income earned by the Contractor resulting from activities related to fulfilling the terms of the contract. It includes, but is not limited to, such income as fees for service, third-party reimbursement and proceeds from sales of tangible, personal or real property.

Policy

Program income may be used for allowable costs of the contractor. A spending plan must be approved by the Department for use of program income in excess of 5 percent above the amount approved in the program budget. Program income must be used before using the funds received from the Department. Excess program income may be retained to build a three-month operating capital.

DRAFT 4-6-2022

Procedure

The contractor must develop other sources of financial support for program activities, including the following:

- Recover all third-party revenues to which the contractor is entitled as a result of services provided.
- Garner other available federal, state, local and private funds.
- Charge clients according to their ability to pay for services provided, based on a sliding fee schedule. The sliding fee schedule must be based on standardized guidelines provided by the Department. Any changes from these guidelines must have prior written approval by the Department. See CAH Client Eligibility and Voluntary Participation Policy.
- Client billing and collection procedures must be consistent with those established and provided by the Department. Services funded partially or completely by the Department will not be denied to a person because of inability to pay a fee for the service. Individual and/or immediate family income and family size are used in developing the sliding fee schedule. See CAH Client Eligibility and Voluntary Participation Policy.
- The contractor must report to the Department, within forty-five days, all funding sources using the CAH Expenditure Workbook.

Number: 404
Title: Documentation of Local Match
Effective Date: 10-1-2022
Revision Date:
Date of Last Review:
Authority: 45 CFR, Part 74.23; Iowa Administrative Code 641 IAC 76.13(4)

Overview
The provisions of 45 CFR, Part 74, Subpart C define terms, set standards of allowability and valuation, and establish procedures for contractor's documentation of local match. Sources that may be used for matching funds are reimbursement for service from third parties such as insurance and Medicaid, client fees, local funds from non-federal sources, or in-kind contributions. In-kind contributions must be documented in accordance with generally accepted accounting principles.

Policy
Contractors shall follow the guidelines outlined in 45 CFR, Part 74, Subpart C for documenting local match.

DRAFT 4-6-2022

Procedure
- In general, local match, whether in cash or in-kind, represents the portion of the contractor costs not borne by IDPH. The basis for determining valuation and charges for all elements of local match, including personal services, materials, equipment, and realty, must be documented in a manner acceptable to IDPH.
- Charges for property purchased completely with federal funds and any portion of property purchased in part by federal funds are not permissible for inclusion as local match unless otherwise authorized by federal legislation. However, operating costs (such as housekeeping and maintenance, protection, utilities, etc.) may be included with adequate supporting documentation, even though valuation may be in the form of a square footage rate along with unallowable property charges.
- The value of volunteer labor and donated services may be included as part of local match and must be documented by the same method that the contractor uses for its paid employees. The valuation used for personal services would ordinarily be the value placed on the task performed and not necessarily the time rate of the individual rendering the service.
- Fees collected from Medicaid, and/or any other private or third party source, must be reported to the state when collected and must be expended on program-related activities. Subcontractors are required to report program income to the contractor. The contractor is required to report program income monthly to IDPH on the supporting documentation workbook that the contractor submits with each claim in IowaGrants.gov.
- The Contractor is certifying that the amount of match reported is available to IDPH to use as federal match. IDPH will consider all the match funds reported by the Contractor as available for federal match, although IDPH may elect to use only a portion of the certified match for Title V.

Number: 405
Title: Advances of Contract Funds
Effective Date: 10-1-2022
Revision Date:
Date of Last Review:
Authority: Iowa Administrative Code 641 IAC 76.13(3); Contract General Conditions

Policy
In the event the contractor lacks sufficient working capital to provide the services of the contract, an advance not to exceed one month's value of the contractual amount may be provided by IDPH. One-third (1/3) of this advance will be deducted from eligible reimbursement of expenses for the 7th, 8th, and 9th months of service.

Required Resources for Implementation
IDPH Remittance of Interest Earned Form

Procedure
- Requests for Advance of Contract Funds must be made via IowaGrants.gov Correspondence and must include sufficient justification for the advance.
- IDPH General Contract Conditions stipulate that cash advances, whether permanent or in the form of working capital, must be maintained in interest bearing accounts.
- Interest earned by the contractor on cash advances shall be allocated by the contractor to the program for which the cash advance was received.
- All interest earned on cash advances shall be remitted to the Department on a quarterly basis or more frequently if requested by the Department. Interest amounts up to $250 per contract period in the aggregate for all federal funded programs may be retained by the Contractor for administrative expenses only.
- The quarterly interest earned statement must be attached to a Correspondence in IowaGrants.gov and sent to the contract agency's consultant and contract manager.
- The IDPH Remittance of Interest Earned form must be completed and submitted along with the quarterly interest earned statement via IowaGrants.gov and via mail to:

  Chief, Bureau of Family Health
  Iowa Department of Public Health
  Lucas State Office Building
  321 E 12th Street
  Des Moines, IA 50319

Number: 406
Title: Reimbursement of Expenses
Effective Date: 10-1-2022
Revision Date:
Date of Last Review:
Authority: Iowa Code 8A.502

Policy
Contractors are reimbursed for expenses incurred by submitting a monthly claim and supporting documentation workbook located in the IowaGrants.gov grant site.

Procedure:

- The Department provides the supporting documentation workbook to the contractor at the start of the contract year. The supporting documentation workbook is an Excel workbook that is used by the contractor to report the amount of grant funds expended in each line item per program (e.g., CAH, etc.) each month. The supporting documentation workbook is also used by the contractor to report the amount of funds billed to "other" funding sources (e.g., Title XIX) and received from "other" funding sources each month.
- A claim including the supporting documentation workbook is due 45 days after the month of expenditure.
- All claims are to be submitted via IowaGrants.gov.
- The monthly claim must also include the amount of funds billed *to* 'other' funding sources and received *from* 'other' funding sources each month.
- CAH agencies may choose to bill Medicaid/Medicaid MCOs and not bill private third party payers for services if using federally approved pediatric preventive ICD-10 codes. Iowa Medicaid and Medicaid MCOs are required to complete the 'pay and chase' for third party payment for pediatric preventive health services with the designated ICD-10 codes. These ICD-10 codes are listed in State Medicaid Manual Part 3 - Eligibility Transmittal 76 and ensures a claim for pediatric preventive services (including EPSDT services) will not require third party billing for clients with private insurance. The ICD-10 code must be in the primary diagnosis field on the claim to ensure the claim does not require submission to a third party payor. Other diagnosis codes may be included in subsequent diagnosis code fields on the claim.

Title: Fiscal Record Retention
Effective Date: 10/01/2022
Revision Date:
Date of Last Review:
Authority: 45 CFR Part 74; IDPH General Conditions

IDPH IOWA Department of PUBLIC HEALTH

Policy
IDPH requires that all fiscal records be retained for a period of five (5) years from the day the contractor submits its final expenditure report.

Procedure

- IDPH requires that all accounting and financial records, programmatic records, supporting documents, statistical records and other records reasonably considered as pertinent to the MCAH contract be retained for a period of five (5) years from the day the contractor submits its final expenditure report.
- If any litigation, claim, negotiation, audit or other action involving the records has been started before the expiration of the five (5) year period, the records must be retained until completion of the action and resolution of all issues which arise from it, or until the end of the regular five (5) year period, whichever is later.
- Client records, which are non-medical, must be retained for a period of five (5) years after the date of service.
- Federal regulations and the agreements between the state agency and the contractor require that all records determined to be pertinent to the contract must be made available to representatives of the state and/or federal government for purposes of an audit, quality improvement, or other legally authorized purposes.

DRAFT 4-6-2022

Number: 408
Title: Medicaid Administrative Funds Billing
Effective Date: 10/01/2022
Revision Date:
Date of Last Review:
Authority: Omnibus Agreement

Overview
In Iowa, DHS administers the Iowa Medicaid Program and therefore is the administrative agency for the EPSDT program. Through a formal written agreement, DHS engages the Department to provide Informing, care coordination, Presumptive Eligibility, and related interpretation services for eligible clients. The Department fulfills this responsibility by contracting with local community based programs to work with clients in collaborative service areas. This is an arrangement unique to Iowa. These services are paid through Medicaid Administrative Funds (MAF) associated with the written agreement. As a result these services are frequently referred to as "MAF services".

Policy
Contractors shall bill expenses related to the quality provision of Informing, care coordination and Presumptive Eligibility services (MAF services) to the Department in compliance with Department Guidelines.

DRAFT 4-6-2022

Procedure
1. Include all expenses and staff time spent doing Informing, Presumptive Eligibility, care coordination, and related interpretation, not already funded in another way, in a contractor's Medicaid Administrative Fund (MAF) billing to the Department for Medicaid enrolled clients. Examples of activities that may be billed to Medicaid Administrative Funds include the following:
    a. Client Contact - Time spent with the client and locating needed information to contact the client. Telephone, in person, text, email, videoconference or home visit with the client for care coordination, Informing and Presumptive Eligibility.
    b. Identification of needed resources and referral - Activities related to identifying appropriate resources and making referrals for the client based upon their needs
    c. Care Coordination - Activities to set up appointments (outside of the Contractor agency, subcontracts and parent company), making arrangements for transportation to health services, arranging interpreter services, and linking with other support services.
    d. Documentation - Documentation of services following Department guidance.
    e. Maintaining fiscal records - Completing claims forms and preparing submission to the Medicaid or MCO fiscal agent. Reviewing denials of original billings and resubmitting the corrected claims. Maintaining fiscal records based on generally accepted auditing procedures.
    f. Maintaining supplies - Managing the paper, brochures, postage, printing labels, and other supplies for MAF funded services.
    g. Managing lists and reports - Downloading and analyzing data for quality improvement, and reports for staff to do their work related to MAF services.
    h. General office work - Answering MAF services phone calls, taking messages, making appointments with the care coordinator, other work to maintain communication and requirements of the organization such as filling out time

studies, travel documents, completing reports, etc. related to MAF funded services.

i. Staff travel non-client specific - Travel to clinic sites (to provide MAF, not direct care), meetings, and conferences related to MAF funded services.
j. Developing community linkages - Building and maintaining the referral network for medical home and care coordination. Developing and maintaining formal and informal linkages between community agencies, providers, and organizations to build the public health services and systems and enabling capacity in the CSA.
k. Meetings - Meetings to plan, communicate, and coordinate the activities of the program, Family Engagement Group meetings, including planning and logistics of coordinating the group, membership recruitment, etc.
l. Continuing education- Staff skill development and education to keep current on policy and best practice related to MAF services.
m. MAF program administration - Management of the program, including supervising the work of MAF funded staff.
n. Developing educational materials for clients - Creating and maintaining brochures, letters, posters and other educational materials related to MAF services for clients.
o. Vacation, sick, holiday time - Time allocated for vacation, holiday, and sick days based on the time study allocation of time to MAF and policies of the organization.

2. The total cost of providing the service, as billed to MAF, should be included in the time study.
3. Submit all CAH MAF, into your line item CAH monthly claims.
4. Complete the MAF section in the MCAH Expenditures and Supporting Documentation workbook.
5. The MAF section of the workbook will link to the Program Income sections to carry those expenses up appropriately.
6. This is to be entered into IowaGrants.gov within 45 days of the month of expenditures.

DRAFT 4-6-2022

Number: 501
Title: Service Note Review
Effective Date: 10/01/2022
Revision Date:
Date of Last Review:
Authority: MED-17-005 (Maternal and Child And Adolescent Health Omnibus), Contract General and Special Conditions, IAC 441-79.3

Overview
Service Note Review SNR) applies to Presumptive Eligibility (PE), Informing (INF), and Care Coordination (CC) services (including home visits for care coordination) regardless of payer source. The SNR is conducted per the contract. Reviewers must have knowledge of the program requirements and services and have access to the MCAH data system. Project directors serve as the primary contact for the reviews at the local agencies.

Policy
Contractors will conduct SNR as specified in the contract to review documentation of Presumptive Eligibility, Informing, Care Coordination, and Home Visit for Care Coordination to assure IDPH requirements are met.

Required Resources for Implementation
IDPH CAH Program provides a list of Contact IDs and forms to complete the SNR.

DRAFT 4-6-2022

Documentation: The following documentation is required for each procedure:

1. **Presumptive Eligibility:**
    a. Demographics including race, ethnicity, primary language, and interpreter needed
    b. County of service
    c. Location
    d. Result of Notice of Award (NOA)
    e. NOA number
    f. Contacted person
    g. Client/family feedback
    h. Documents kept on file and documents given to family
    i. Coverage explained
    j. First and last name of the service provider and their credentials.
    k. Intake assessment addressed with IRIS/IRIS component of the MCAH data system used to assess immunization status
2. **Informing:**
    a. Initial Inform:
        i. County of service
        ii. Location
        iii. Statement that an informing letter or packet was sent
        iv. First and last name of the service provider and their credentials.
    b. Inform Follow up
        i. County of service

ii. Location
iii. Specific time of day the attempt to contact the family was made. Enter this in 'Time in field". When two follow-ups are provided, be sure these are at different times of day (AM and PM). One attempt is to be made during business hours and one attempt outside normal business hours (evenings and weekends). A text may be substituted for one follow-up phone call.
iv. Description of the attempt to reach the family and the result of this attempt (no answer, busy signal, phone disconnected, etc.) including any message left and the content of that message.
v. A follow-up letter is sent, (only after experiencing at least two failed phone attempts)
vi. First and last name of the service provider and their credentials
vii. Follow-ups are required within the calendar month of the initial inform.

c. Inform Completion
   i. Demographics, including race, ethnicity, interpreter needed, and primary language
   ii. County of service
   iii. Location
   iv. Contacted person
   v. Explanation of full benefits and services available under the EPSDT *Care for Kids* program
   vi. Medical well visit appointment summary (name of provider; past or upcoming appointments)
   vii. Dental appointment summary (name of provider; past or upcoming appointments)
   viii. Immunization status via IRIS, unless the child's immunization record is not in IRIS
   ix. Client/family feedback
   x. Referrals, outcomes, and plan for follow-up
   xi. Intake assessment addressed
   xii. First and last name of the service provider and their credentials

3. **Care Coordination**
   a. Demographics including race, ethnicity, primary language, and interpreter needed
   b. County of service
   c. Location
   d. Contacted person
   e. Concerns and issues
   f. Staff response

DRAFT 4-6-2022

g. If coordinating medical/dental care:
   i. Medical appointment summary (name of provider; past or upcoming appointments)
   ii. Dental appointment summary (name of provider; past or upcoming appointments)
   iii. Assessment of immunizations via IRIS, unless the child's immunization record is not in IRIS
   iv. Referrals, outcomes, & plan for follow-up
   v. Client/family feedback
   vi. Intake assessment addressed
   vii. First and last name of service provider and their credentials.

For targeted follow up care coordination notes that do not involve coordinating medical/dental care, the date of the last wellness exam, name of provider, and assessment of immunization status is not required. Indicate in the note if it is a follow-up care coordination service. Address any additional family needs.

DRAFT 4-6-2022

Procedure

1. The contract reviewer will log in to IowaGrants.gov, go to their Agency, click on SNR 1 or SNR2 as appropriate, and open the Service Note Review Summations (Child Health: PE, INF, CC. Maternal Health: PE, CC),
   a. Save the files using "save as" and selecting a secure location on the contractor computer (do not work on the files in IowaGrants.gov)
   b. Review the contractor documentation using the provided forms as a checklist for included elements. Complete the forms (including contact ID & service date) and by checking the "yes" or "no" boxes to indicate if the required elements of documentation are in the record. An 'agency review comment' field is available for your use for any additional comments (optional).
   c. If the contractor did not provide a specific type of service to be reviewed, check the 'No Services This Period' box on the Service Note Review Summation that verifies this (e.g., if no presumptive eligibility services were provided during the month reviewed).
   d. Upon completion of the review, upload the completed summations into IowaGrants.gov in the appropriate Service Note Review component, within 30 days from the start of the review process.
2. SNR Quality Improvement Plans are required for contractors that do not achieve 90% documentation compliance for their review. 90% compliance will be calculated by summing the total service records submitted for review as the denominator, with the number in compliance as the numerator.

a. Contractors with continued non-compliance will be required to complete more frequent reviews.
b. Required elements of the Quality Improvement Plan are the actions that will be taken to assure documentation is in compliance with this policy, the person completing this step and responsible for assuring documentation comes into compliance, and the timeline for when the steps will be taken.

3. Upload the Quality Improvement Plan to IowaGrants.gov to the Service Note Review - Quality Improvement Plan component. The plan must be uploaded to IowaGrants.gov within 30 days from the receipt of the SNR results from IDPH.

DRAFT 4-6-2022

Number: 502
Title: Medical Record Chart Audit
Effective Date: 10/01/2022
Revision Date:
Date of Last Review:
Authority: General Conditions, Omnibus Agreement

Overview

The Iowa Department of Public Health MCAH medical record chart audit is part of the Title V program quality assurance program and the intent is to evaluate current practices within the agency and identify areas to improve quality of service delivery and documentation. Presumptive eligibility, informing, and care coordination are not included in these medical record audit guidelines as they are reviewed during the service note review process.

Policy

- Medical record audits are required of all contractors providing direct health and oral health services and they apply to all direct care services provided through the CAH program regardless of payer source. CAH direct care services include the following services as defined in the Screening Center Provider Manual http://dhs.iowa.gov/policy-manuals/medicaid-provider.
- Virtual or in-person chart audits may occur at the discretion of the Chief, Bureau of Family Health and the lead consultant for the contractor.
- All health care services provided for clients under the CAH program must be entered into the MCAH data system. Documentation of the clinical detail for direct health care services must also be maintained in a client chart (paper or electronic). Both of these documentation forms will be reviewed during the audit.
- Documentation of services must comply with generally accepted principles for maintaining healthcare records and with Medicaid requirements established by the Iowa DHS in IAC 441 Chapter 79.3 (See also Iowa's Title V Administrative Manual for Community Based Programs).

DRAFT 4-6-2022

Procedure

Internal Chart Audit: At least one agency-conducted (internal) chart audit must be completed every other year. Following the internal chart audit, the agency is required to submit completed review tools and a MCAH Chart Audit Summary form, complete with plans for quality improvement based upon the audit findings.

The contractor's internal chart audit team will be a multidisciplinary team representative of the disciplines providing CAH services (e.g., nurse, social worker, dental hygienist).

- The contractor team must include representatives of the disciplines providing direct care clinical services.
- Subcontracted staff members are strongly encouraged to participate in the audit process.

Number: 502
Title: Medical Record Chart Audit
Effective Date: 10/01/2022
Revision Date:
Date of Last Review:
Authority: General Conditions, Omnibus Agreement

Joint Chart Audit: Opposite years from the internal chart audit, the contractor is required to have an audit conducted by a joint review team composed of contractor staff and staff from the Bureaus of Family Health (BFH) and Oral and Health Delivery Systems (OHDS). The audit team, including BFH and OHDS staff, must be large enough so that each team member reviews one to three charts.

Chart Audit Process:

1. A minimum of one week prior to the audit (internal or joint) the Department will provide the contractor a list of ID numbers randomly selected from the MCAH data system using the selection criteria found in the *Medical Record Selection Criteria* section found below.
2. The contractor shall carefully review the list of ID numbers provided from the MCAH data system to ensure that the selected charts meet the required selection criteria. Due to the complex nature of selecting IDs that meet all criteria, contractors may not need to review all the charts included in the list of selected charts **IF** they have otherwise met the selection criteria outlined below. Some IDs may need to be swapped out for a different ID due to a nuance or error. Lead consultants must be notified of, and approve, alternate charts if the contractor determines a different ID needs to be reviewed.
3. Department and contractor staff shall review the medical records using the most updated medical record audit tools prior to the scheduled virtual audit meeting. Each year's medical records audit tools can be found on the Maternal and Child Health Portal.
4. Most contractors utilize some form of medical record outside of the MCAH data system, whether electronic or paper. In order for the Department staff to properly audit the selected medical records, the contractor shall send the medical records to the Department for each team member to review. The contractor only needs to send non-MCAH data system records to complete the audit for each chart as the consultants will have access directly to the MCAH data system for review.
    a. Medical records must be sent to the Department at least 5 business days in advance of the scheduled audit via fax, secure email, or via google folder. Ensure the medical records include the MCAH data system ID, any paper documentation, and all electronic medical records related to CAH services provided within the past 12 months.
    b. If mailing medical records, you must send at least two weeks prior to the for the medical records to arrive at the Lucas building. Follow your agency's protocol for mailing documents with protected health information.
    c. Include one medical record audit tool with notes on where to find required elements.
5. Contractors will ensure that their staff auditing charts have access to the MCAH data system. If staff do not have access, time should be scheduled for reviewers to work with staff who do have access.

DRAFT 4-6-2022

6. The CAH Project Director should set aside time with their staff ahead of time to review the required tools and expectations of medical record audits. CAH Project Directors will assign medical records to reviewers.
7. Contractors and Department staff review assigned medical records independently prior to the scheduled debrief. Contractors may choose to meet prior to the debrief to discuss any questions or jointly review medical records.
8. Debriefing session will consist of a round-table style share of medical record findings for strengths and areas for improvement and completion of the Chart Audit Summary (see *Chart Audit Summary* section below for more detail).

DRAFT 4-6-2022

Chart Audit Summary: Complete one CAH Chart Audit Summary for the entire chart audit process. Areas to be addressed include:

- **Strengths**: Summarize strengths identified through the chart audit process. These may pertain to program implementation and/or documentation.
- **Telehealth Technology:** In review of the documentation is the technology used for telehealth HIPAA compliant? (If more than one platform in use are they all HIPAA compliant?) A portion of this element (investigation) was waived by the federal government during the pandemic emergency, but if planning to do telehealth in future, will need to consider method of use.
- **Recommendations for Improvement:** Identify recommendations for improving program implementation and/or documentation.
- **Plans for Quality Improvement:** Identify actions to be initiated in response to findings of this review. Include how results will be shared with staff to improve practice and enhance program development. Specify the person responsible, the projected date of completion for each activity, and how quality improvement will be measured. Provide adequate narrative to fully describe the assessment and plan for quality improvement.

Audit Due Date and Submission: Internal and joint medical record audit results are due to the regional consultant on the date listed in the contract. A copy of the completed CAH medical record audit tools (including quality improvement plans based upon audit findings) and the Medical Record Audit Summary are to be sent via secure mail, fax, or regular mail to the lead consultant. When sending records for Department review as part of the joint audit or with findings in the internal audit, secure methods (encrypted email, etc.) must be used to protect patient confidentiality.

Documentation at IDPH: Once the review tools and summary tool is complete for the contractor, the lead consultant will upload the summary tool to IowaGrants and save it in the "site visit" section.

Medical Record Selection Requirements: IDPH will randomly select, and provide to the contractor, client ID numbers representing charts from the MCAH data system for the contractor

to review using the criteria below. Due to the complex nature of selecting IDs that meet all criteria contractors may not need to review all the charts included in the list of selected charts from the lead consultant **IF** they have otherwise met the criteria outlined below. Some IDs may need to be swapped out for a different ID due to a nuance or error. Lead consultants must be notified of, and approve, alternate charts if the contractor determines a different ID needs to be reviewed. The following is the required record selection criteria:

- A minimum of ten CAH health records for direct care clinical services delivered in the 12 months prior to the audit. CAH records may be open or closed at the time of the audit, but the services being reviewed should be complete (e.g., lead tests should have results back and follow up with the family and primary care provider documented.).
- Oral health services must be included in the charts pulled for CAH audit.
- At least one record of each type of direct care service provided in the previous 12 months must be reviewed.
- At least one record from each subcontractor must be reviewed.
- At least one record from each service site type must be reviewed (e.g., home visits, WIC, school, OB clinic, agency clinic, etc.).
- If the contractor has 20 or less service providers (in the service area, including subcontractors and other agreements), at least one record from each service provider must be reviewed.
- If the contractor has more than 20 service providers (in the service area, including subcontractors and other agreements) a minimum of 20 different service providers must be reviewed.

Contractors that subcontract or have another form of agreement with another Title V contractor to provide services in their service area, shall work with the subcontract Title V contractor and IDPH regional consultants in advance of the chart audit to decide if the records will be reviewed as part of the contract agency's chart audit or part of the subcontractor's chart audit.

Title: Cost Analysis
Effective Date: 10/01/2022
Revision Date:
Date of Last Review:
Authority: Office of Management and Budget Circular 2 CFR Part 200: Uniform Administrative Requirements, Cost Principles, and Audit Requirements for Federal Awards: Subpart D - Post Federal Award; Subpart E-Cost Principles; and Subpart F-Audit Requirements; 2 CFR Part 225, Cost Principles for State, Local, and Indian Tribal Governments (OMB Circular A-87); 2 CFR Part 230, Cost Principles for Non-Profit Organizations (OMB Circular A-122) or 2 CFR Uniform Administrative Requirements for Grants and Agreements with Institutions of Higher Education, Hospitals, and Other Non-Profit Organizations (OMB Circular A-110)

IDPH IOWA Department of PUBLIC HEALTH

Overview

The cost analysis establishes the amounts to be billed for each CAH service provided. Time studies to justify salaries are required by the Office of the Inspector General and the federal Office of Management and Budget (OMB).

Policy

All contractors must complete the MCAH Cost Analysis and continuous time studies at the beginning of a project period and subsequently whenever criteria for re-submission are met.

Procedure

1. Complete the Cost Analysis Workbook, subcontractor workbooks, and transportation plan following the guides, tools and training on the MCAH Project Management Portal by the date designated in the contract.
2. The MCAH Time Study form and instructions have been developed and shall be used for the continuous, daily time studies that must be completed and maintained on file. Contractors may submit an alternate time study form for approval and use.

Resources

- Cost Analysis Guide, Instructions for Subcontractors, tools, resources and training on the MCAH Project Management Portal for more specific guidance on completing the cost analysis.

DRAFT 4-6-2022

Number: 601
Title: Managed Care Organizations
Effective Date: 10/01/2022
Revision Date:
Date of Last Review:
Authority: RFP58823005

Overview
In 2016, Iowa Medicaid went through a modernization process that enrolled the majority of clients enrolled in Medicaid into Medicaid Managed Care Organizations (MCOs). Clients enrolled in MCOs must access medical care from providers enrolled in their chosen or assigned MCO to ensure full coverage of services. The MCO is responsible for providing medical care coordination to their clients.

Policy
Contractors shall maintain credentialing/provider status with all Medicaid MCOs in Iowa to seek reimbursement for Medicaid EPSDT services.

Procedure
Contractors shall:
1. Follow the enrollment and credentialing process outlined by each MCO.
    a. Amerigroup: https://provider.amerigroup.com/iowa-provider/join-our-network
    b. Iowa Total Care: https://www.iowatotalcare.com/providers/become-a-provider.html
2. Negotiate a contract for service provision.
3. Follow the terms of the contract for payment and service provision.
4. Contractors are encouraged to partner with MCOs in serving clients enrolled in managed care.

Resources
- Iowa Total Care
- Amerigroup

DRAFT 4-6-2022

Number: 602
Title: Immunization Access and Promotion
Effective Date: 10/01/2022
Revision Date:
Date of Last Review:
Authority: Iowa Code § 139A.8, Iowa Administrative Code 641-7; IAC 641-76.11; Social Security Act Section 506

Overview
Increasing the number of children and adolescents appropriately immunized is a core function of the Title V Block Grant legislation. For the policy and procedure on administration of vaccines see Immunization & Vaccine Administration

Policy
Contractors shall assist clients in accessing immunization through enabling services and the public health services and systems services of community and family outreach, education, and immunization promotion.

Procedure
Contractors shall:

- Advance initiatives to assure clients receive the full schedule of age-appropriate immunizations per the Advisory Committee for Immunization Practices (ACIP)
- Coordinate the provision of immunizations in the service area through assessing need, assuring access through outreach, education, and immunization promotion.
  - Disseminate public education materials and information that promotes immunizations throughout the service area.
  - Engage at the Building Relationships level or higher (see Community Partnerships Policy) with community organizations, groups, and families to promote and provide education about the importance of recommended childhood vaccines.
  - Partner at the Common Goal level or higher (See 605 Community Partnerships) with Priority Population organizations, groups, and families to promote and provide education about the importance of recommended childhood vaccines.
- At each contact, assess the client's immunization status through one of the following: IRIS, the IRIS feed of recommended vaccinations in the MCAH data system, or the client's medical records. Once immunizations are assessed, make appropriate referrals and utilize enabling services to the client's medical home. If immunizations were assessed by a contractor in the past 30 days, immunizations do not have to be re-assessed. Enabling services shall be provided if family requests.
- If the client's immunization history is not in IRIS, and client medical records are not available, parent/caregiver recollection may be used to assist the family in assessing immunizations; however, every effort will be made to obtain immunization records to complete a full assessment. Additionally, contractors shall implement the best practice of updating the client's IRIS record by documenting vaccines in IRIS that were administered at another location, in accordance with IRIS requirements. When a parent report is used, document the reason in the MCAH data system.

DRAFT 4-6-2022

- Due to the low completion rate of the HPV vaccine in Iowa, contractors are required to promote initiation and completion of HPV vaccine for age appropriate clients. At a minimum, this is accomplished by including information on the importance of HPV vaccine in the initial Inform packet for client's age 11 years and older.
- Contractors receiving funds to provide immunization services, immunization promotion and outreach or subcontracting with an entity receiving other funds for immunization services, outreach and promotion such as through the IDPH Immunization Bureau, Head Start, Early Childhood Iowa, or other grants/funds shall delineate in writing the services provided as part of those other funding sources and the services that will be provided as part of the CAH program. Funding and staff may be braided to meet the needs of the community with duties, funding, and services for each grant clearly defined, program requirements of each program met, and expenses billed appropriately to each funding source.

  For information on requirements for contractors opting to provide the gap-filling service of immunization administration, including staffing and contingency plans, training, HPV promotion and documentation, standing order, and VFC enrollment, see 827 Immunization & Vaccine Administration.

DRAFT 4-6-2022

Number: 603
Title: Early ACCESS
Effective Date: 10/01/2022
Revision Date:
Date of Last Review:
Authority: Individuals with Disabilities in Education Act

Overview
Early ACCESS is Iowa's early intervention system for infants and toddlers under three years old not developing as expected or who have a medical condition that can delay typical development. Early intervention focuses on helping parents and other caregivers so that they can support their child's growth and development during every day routines and activities.

Congress passed the Individuals with Disabilities Education Act (IDEA) in 1986. The IDEA created the Infants and Toddlers with Disabilities Early Intervention Program (Part C). The goals of IDEA are to improve the development of infants and toddlers with disabilities and improve outcomes of children before entering school. Each state receives federal Part C funds to establish and implement an early intervention system. Early ACCESS is Iowa's early intervention system (IDEA, Part C) for infants and toddlers under three years of age not developing as expected or who have a medical condition that can delay typical development.

Early intervention focuses on helping parents and other caregivers so that they can support their child's growth and development during every day routines and activities. Early ACCESS is not intended to be a stand-alone program, therefore families in Early ACCESS may need additional support or services from other providers. Early ACCESS will work with families to identify additional services or resources that may be needed.

Before a family can participate in Early ACCESS, the child must be determined eligible. In Iowa, children with certain diagnosed conditions are automatically eligible for Early ACCESS. For children with no diagnosed condition, an evaluation will be completed by Early ACCESS staff to determine eligibility. A child is eligible if they are found to have at least a 25% delay in one or more areas of development. The evaluation uses information obtained from many sources, including information from parents or caregivers, the referral source (if applicable), through administration of an evaluation tool, direct observations of the child, and/or a review of medical records (if applicable).

If a child is found eligible for Early ACCESS services, child and family assessments are completed. These assessments provide information about the child, such as interests and abilities and what the families would like the child to be able to do. The family assessment is a way for the Early ACCESS team to learn about family routines; what goals they have for their child; and supports they may be interested in to help the child develop and grow. Once assessments are completed, an Individualized Family Service Plan (IFSP) is developed by the team, which consists of a service coordinator, service provider(s), and the family. The IFSP contains outcomes, what the family wants the child to be able to do within family routines and activities, and identifies what service(s) will be needed to help the family achieve the outcomes.

To learn more about Early ACCESS visit the Early ACCESS webpage on the Iowa Family

DRAFT 4-6-2022

Support Network website. The Early ACCESS website can be used to make a referral for a child, learn what families can expect if they enroll in Early ACCESS, and view videos showing what a home visit in Early ACCESS is like.

Early ACCESS is administered by four state agencies, the Iowa Department of Education (IDOE), Iowa Department of Public Health (IDPH), Iowa Department of Human Services (DHS), and Child Health Specialty Clinics (CHSC). Below are the contributions of each agency to Early ACCESS:

- IDOE is the lead agency for Early ACCESS. As the lead they coordinate the fiscal resources available for early intervention and are responsible for the development of policies/procedures to meet federal requirements for the implementation of IDEA Part C. IDOE is responsible for providing education programs and services for preschool and school-age students, including children with disabilities, from birth through 21 years of age. IDOE utilizes the Area Education Agencies (AEAs) to provide early intervention services in Iowa.
- The Department, through Title V CAH contractors, provides developmental and emotional-behavioral screenings (as needed) and screening follow-up to children ages 0-3 years who were referred to Early ACCESS and found not eligible.
- DHS assures that children in foster care and children who have a founded or confirmed case of abuse or neglect are provided information about and referred to Early ACCESS.
- CHSC, through Regional CHSC Centers, provide service coordination for infants and toddlers who are medically complex or were drug exposed. CHSC also provides nutrition services as well as medical record review/health assessments for children enrolled in Early ACCESS.

DRAFT 4-6-2022

Policy

Contractors will provide developmental screening follow-up to infants and toddlers ages 0 to 3 years found not eligible for Early ACCESS services.

Procedure

AEA Partnership: In partnership with the Early ACCESS liaison from each AEA serving the CSA, contractors will develop a referral process for the AEA to refer infants and toddlers, ages 0-3 years, found not eligible for Early ACCESS to the CAH program for developmental screening follow-up. The referral process will include:

- Name and contact information of CAH program staff whom Early ACCESS will contact to make a referral for developmental screening follow-up; and
- Child and family information the AEA will share with the CAH program so that CAH staff can contact families to offer developmental screening follow-up.
- Development of a plan, with the Early ACCESS liaison at each AEA serving the CSA, for assuring Early ACCESS and CAH staff are informed of the referral process.

Early ACCESS Developmental Screening Follow-up: Provide support for the developmental needs of children who were found not eligible for Early ACCESS. When CAH receives a referral from AEA for developmental screening follow-up, they will do the following:

- Enter referrals received from the AEA for developmental screening follow-up in the MCAH data system. Document the outcome of the contact in the MCAH data system.
- Contact families whose child was referred to the CAH program for developmental

screening follow-up and request information about developmental and emotional/behavioral screening that has been administered for their child.

- Offer to administer gap-filling developmental and emotional/behavioral screening if screenings are not going to be administered by the child's medical home or other provider, or if the family doesn't know.
- Provide all results of developmental screens and emotional-behavioral screens to the medical home, regardless of result.
- Provide related anticipatory guidance and follow up services if developmental and/or emotional-behavioral screens are administered and results do not indicate a need for a referral to Early ACCESS. Resources CAH programs can use for education include:
    - Child development page on the Iowa Family Support Network website
    - CDC Learn the Signs Act Early website and materials and CDC's free Milestone Tracker app
- Refer children 0-3 years old to Early ACCESS if developmental and/or emotional-behavioral screens are administered and results indicate a need for a referral to Early ACCESS and provide referral education. Educate families on what they can expect when their child is referred. A resource CAH programs can use is the Early ACCESS referral postcard, which can be ordered online, at no cost, on the Iowa Family Support Network website.
- Title V refers to the medical home, the AEA, or the Iowa Family Support Network. Title V informs 1st Five regarding patterns in lack of available medical homes or lack of screening in medical homes.

Documentation

- AEA to CAH Program Referral Process documentation
- Client record in MCAH data system
- Refer to the *Developmental & Behavioral Health Surveillance & Screenings* Policy for documentation and billing of developmental and emotional/behavioral screenings

Resources

- Information on Early ACCESS: Iowa Family Support Network
- Administrative Rules for Early ACCESS
- Memorandum of Agreement for Early ACCESS, Iowa's Part C of IDEA

DRAFT 4-6-2022

Number: 604
Title: Prevention and Early Intervention for Lead Poisoning
Effective Date: 10/01/2022
Revision Date:
Date of Last Review:
Authority: RFP 58823005; Iowa Code §§ 135.103, 135.105D; 641 IAC chapters 67, 72

Overview

Blood lead testing and follow-up services are part of Iowa's EPSDT Periodicity Schedule. Due primarily to the low testing rates especially between the ages of 24 through 35 months, Iowa Title V has chosen the prevention and early intervention of blood lead poisoning through testing of 12 through 35 month olds as a State Performance Measure for 2021-2026.

Policy

Contractors are responsible for assuring access to blood lead testing for children 12 through 35 months in their service area.

DRAFT 4-6-2022

Procedure

1. Contractors shall assure every child 12 through 35 months enrolled in the CAH program shall be tested for blood lead poisoning if the child has not been tested in the previous 12 months. Contractors shall utilize enabling services to assist the family in obtaining blood lead testing through their medical home. If enabling services fail, contractors shall administer blood lead testing. (See Lead Screening & Testing Policy)
2. Contractors shall assure blood lead testing is accessible and utilized by building partnerships with community groups and stakeholders to conduct outreach and education with families of young children. Contractors shall:
    a. Engage at the Building Relationships level (see Community Partnerships Policy) or higher with local Childhood Lead Poisoning Prevention Programs.
    b. Engage at the Building Relationships level or higher with community organizations, groups and families to provide education about the importance of blood lead testing and blood lead poisoning prevention.
    c. Partner at the Common Goal level or higher with Priority Population organizations, groups and families.
3. Contractors that are also Childhood Lead Poisoning Prevention Program (CLPPP) grantees (or subcontracting with CLPPP grantees) or receive other funds (Early Childhood Iowa, Head Start, HUD, etc.) for providing or promoting blood lead poisoning prevention and/or testing shall delineate in writing the services provided as part of those funds and the services that will be provided as part of the CAH program. Funding and staff may be braided to meet the needs of the community provided that duties, funding, and services for each grant are clearly defined, program requirements of each program are met, and expenses are billed appropriately to each funding source.

Local Childhood Blood Lead Poisoning Prevention Programs: IDPH contracts with local health departments to serve as Local Childhood Blood Lead Poisoning Prevention Programs (CLPPPs). Contractors with a CLPPP covering a county in their service area shall work collaboratively with the CLPPP in promoting blood lead testing and blood lead poisoning

prevention for children.

Responsibilities of a local CLPPP

- Assuring that primary care providers conduct blood lead testing.
- Providing medical case management of children with blood lead poisoning, including referring children to Contractors or AEA for additional services.
- Providing environmental case management of children with blood lead poisoning.
- Conducting data management of blood lead test results, case management data and data regarding other housing hazards.
- Providing education and outreach to the community, including involving the community in solving healthy housing and lead poisoning problems and the establishment of a coalition for the program.

Resources

- Childhood Lead Poisoning Prevention Program

Number: 605
Title: Community Partnerships
Effective Date: 10/01/2022
Revision Date:
Date of Last Review:
Authority: Contract General and Special Conditions

Overview

Contractors engage in community partnerships, including partnerships with local health care providers, to advance the goals of Title V and engage in the framework of the CAH Program. Local practitioners and CAH staff need to work cooperatively to best meet the needs of Iowa's pregnant individuals, children, adolescents, and families. The Department and its contractors advocate for a system that minimizes barriers to care, focuses on medical homes providing quality, comprehensive care, prevents duplication and fragmentation of services, and coordinates resources. The strategies used to achieve this system of care are built on the MCAH Pyramid, Ten Essential Services of Public Health, and utilize culturally appropriate best, promising, and community generated practices.

Addressing Health Equity Through Partnerships

Contractors shall partner with organizations, individuals and groups specifically designed for and involved with priority populations, prioritizing groups led by the priority populations. Partnerships with priority populations can contribute to inequity when power and resource imbalances persist, such as when higher value is placed on financial and technological resources over lived experience and community connectedness. The "briefcase model" has historically been a common model of engagement with priority populations: i.e. the dominant culture arrives with their agenda and often a requirement to collect data from the priority population, "opens and fills their briefcases with data", and return to their agency with the results, without further connection until the next data requirement. If the priority population resists this model, the dominant agency walks away from the community versus engaging in negotiation and seeking circumstances of mutual benefit. The priority population group may be characterized as difficult, unreachable, or uninterested in partnering, etc.

DRAFT 4-6-2022

Authentic community engagement is key to producing change. This often requires doing work differently through continuously centering community voice. It is:

- Not a one-and-done approach
- Building trust and relationships with community members
- Listening to lived experience and expressed needs
- Closing the communication and feedback loop with the community to ensure your activities align with what they've expressed
- The foundation of the public health services and systems level of the pyramid
- Likely the most challenging and engaging work of Title V.

Policy

Contractors shall engage in partnerships and community engagement throughout their CSA to ensure programs and services are accessible, meet the needs of the community, and engage the community in providing solutions to needs and concerns.

Procedure

Building community partnerships that lead to policy and practice changes affecting the health of the community typically follows a pattern of deepening engagement, trust and shared resources. The table below outlines these levels of engagement and partnership.

Levels of Community Engagement		
Increasing levels of community involvement, impact, trust and communication		
Category 1: Building Relationships		
Common terms associated with this level		**Typical activities at this level**
Outreach	• Communication flows from the Contractor to inform community organization or from the community organization to the Contractor. No commitment • Partner has been introduced to the identified health-related topic/issue. Interest level in addressing the health issue may be unknown • Communication initiated	• Meet and greet • Introductions • Dropping off materials (brochures, flyers) • Open house
Speaker	• Contractor invites community organization to speak at a conference or meeting (or vice versa).	• Presentations • One-sided reporting or round robin sharing of events, services, projects
Referrals	• Contractor provides referrals to the community organization and/or community organization provides referrals to the Contractor • Referrals are given to the patient without coordination or written agreement between Contractor and community organization	Resource Directory • Provider list • Recommended organization or service provider
Category 2: Common Goal		
Feedback Needs Assessment	• Community organization provides one-time or periodic feedback (or vice versa with Contractor providing feedback)	• Surveys, interviews
Engage Meet Plan Discuss	• Community organization reciprocates communication, agrees to discuss partnership development. • Discussion includes opportunities for activities that can be accomplished together or ways each partner can benefit the other, working toward a similar/same goal • Contractor and community organization partner on short-term or easily implemented activities • Partners build their existing organizational capacity (e.g., staff, service, technological, network, financial) and/or establish new capacities.	• Meetings • Working on own initiatives that are not coordinated • Getting approvals/buy in • Reporting information, updates with shared interests and shared goals

DRAFT 4-6-2022

	• Contractor or community organization are seen as the lead or accountable entity.	
Increasing ownership, empowerment, opportunities and supports for both staff and community		
Category 3: Supportive Roles		
Shared Space	• Contractor and community organization provide services in the same location or adjacent locations with the intent of supporting each other's programs and clients.	• MCH services provided at WIC sites
Collaboration Collaborative Partnership	• Contractor and community organization have shown ongoing support in addressing the identified issue. A common goal has been defined and both entities provide a supportive role in addressing the issue • Utilize networks, members, staff, volunteers to recruit new members, expand partnerships, serve on coalition	• Coalitions
Service contracts	• Contractor utilizes community partner to provide services	• Provide funding, inkind
Coordinated Intake and Referrals	• Some data is shared across programs • Written agreements outline each entity's role and responsibility in referrals	• HHLPPSS data input monthly into signify • Active referrals with feedback loop
Involve	• Community organization has ongoing or periodic contact with the project • The partnership develops new ways of working across and within the community, strengthening connections among service providers, with funders, between social service agencies and health systems, with academic research centers, and/or with government agencies.	• Reviewing survey questions • Wording of documents, transcribing or translating documents • Conducting key information interviews • Participating in periodic advisory committee • Joint enrollment paperwork
Category 4 Strategic Implementation		
Risk-Sharing or Outcomes- Based Resource Sharing	• Contractor and community organization share the risk and responsibilities for outcomes	• ACOs • Dual grantees/Joint applications
	• Coordinated, scheduled communication takes place between partners. Routine communication is reciprocated between partners to accomplish activities or goals that meet/address the issue.	• Coalition chair/president • Program consultant • Input on strategic

DRAFT 4-6-2022

	• Community organization is a leader in the priority population or on the issue. Community organization views the partnership as benefiting their organization/population • Clients & families act as facilitator or co-facilitator of a focus group.	planning • Input on evaluation • Engaging the community
Shared Power/Shared Decision Making	• Funding, decision-making, power and responsibility are shared equitably. Both are equitably invested in the outcomes, strategies, risk and benefit • One agency is no longer viewed as the lead	• Joint strategic planning • Joint program implementation • Joint evaluations
Policy and/or Systems Level Change	• The partnership advances policy changes, influences payment and financing models, and/or contributes to the evidence base of integrated approaches to inform research and practice.	
Data Integration	• Partners can view and input patient-data in real time, through joint/compatible data systems • Partners regularly review program-level and/or outcome data to inform decision making	Medicaid and MCAH data system

Title: Public Health Services & Systems Documentation in MCAH Data System
Effective Date: 10/01/2022
Revision Date:
Date of Last Review:
Authority: Contract General and Special Conditions, RFP58823005

Overview
Public Health Services and Systems is the base of the MCAH Pyramid and therefore the majority of the work of CAH contractors. Documenting this work is critical to measure the progress and outcomes of the CAH program.

Policy
All public health services and systems activities outlined in the RFP, RFA, contract, and contractor's approved work plans shall be documented in Community Events in the MCAH data system. In addition, contractors shall document other public health services and systems pyramid level activities conducted on behalf of the CAH program, including outreach activities, group education, and community partnership activities in the MCAH data system following Department guidelines.

DRAFT 4-6-2022

Procedure
1. Document public health services and systems activities required by the RFP, RFA and agency contract, including the contractor's approved work plans.
2. Document public health services and systems activities conducted on behalf of the CAH program.
3. Activities to be documented in 'Community Events' go beyond activities typically associated with the term "community events", and include meetings, presentations, collaborations, the Family Engagement group related activities, outreach, partnerships, and other meaningful interactions with community partners to advance and build community infrastructure and capacity. Other programs may use 'Community Events" to mean only events like health fairs, screening events, etc. Follow each program's guidance for how to use 'Community Events'
4. Contractors may document brief outreach covering multiple topics (meeting round robin sharing, social media posts, media, email listservs, etc.) not required in the RFP, RFA, contract or Contractor's activity plan, in the 'Client Overview Episode'.
5. Complete documentation for the month within 15 days of the end of the month within the MCAH data system.
6. Guidance on documenting Community Events:

Child and Adolescent Health Quick Guide for Completing Community Events

DRAFT 4-6-2022

Episode - Child and Adolescent Health

Type - Community Event

Date/Time/Duration - Enter the date of the meeting, communication, or event, and duration. Duration should be entered in minutes. Time is optional. For phone calls and email correspondence include the entire amount of time spent on all communication. Example: 1 minute for initial call with voicemail. 10 minute return phone call later that day or the next day = 11 min. 10 minutes for several days of back and forth emails related to logistics for an event plus 90 minutes for the event = 100 minutes.

Description - Optional, not visible in reports.
Outcome - Mark “successful’. Can mark as “unsuccessful” if you would like to add events in advance and go back in and update details.

Reschedule Reason - Optional

Result - Select the performance measure or topic associated with the activity.

- For general outreach related to your CAH program and not specific to an NPM or SPM, select “Title V Role and Services”.
- If several result areas discussed (NPMs, SPMs) and spent less than ~15 minutes on each topic, select “Title V Roles and Services”.
- MAF- Contractor is engaging with a community partner related to informing, care coordination, presumptive eligibility and/or expanding access to EPSDT services. Examples: Working with priority population or group of clients on making MAF services culturally appropriate and family centered. Working with a health care provider on developing a bi-directional referral system. Working with adolescents enrolled in Medicaid on health literacy including how to use insurance, scheduling appointments, etc.

County of Service - County event took place in.

Type of Event - Select the type of event that describes the activity

- Adolescent Partner Promotion - Contractor is partnering with other organizations or agencies to promote the adolescent well visit to parents/caregivers.
- Collaboration/Partnership Meeting - Meetings in which the purpose is collaboration or partnership on the selected NPM or SPM
- Community Outreach Activity - Contractor participating/hosting an event in the community, typically a large outreach event - examples: community baby shower; participation in homecoming events (float, participating in an after party, tailgate, etc.), hosting a family event in a park; a float, booth or event at a festival, farmer’s market, city days, county fair, etc.
- Educational Presentation - Contractor provided an educational presentation to a partner organization or the community
- Drop off/Send promotional items (includes brief education/discussion) - Contractor drops off or sends brochures, promotional items, posters, etc. Includes brief education/discussion of the result area(s) related to the items.
- Group Family Education - Contractor provided education to families in a group setting, such as a health literacy class, typical child development, Mental Health 1st Aid, etc.
- Health Fair - Contractor participated in a health fair.
- Immunization Clinic (no client billing) - Contractor provided a mass vaccination clinic with no client billing.
- Introduction to Staff and/or Services - Contractor set up a meeting, dropped by or sent written information to a community partner or provider to introduce staff and/or services. Also include networking, open houses or meet and greet events.
- Media/Social Media - Contractor social media posts, newspaper and radio ads, editorials, interviews, etc.
- Lead Testing Clinics (no client billing) - Contractor provided a mass lead testing clinic with no client billing
- Other Event - Event not otherwise represented by a category. If the event can be captured as another category, do so. This category will be difficult to track by report.
- Priority Population Participation/Recruitment - Contractor events or meetings specifically targeting/designed to include participation from priority populations and/or recruit priority

DRAFT 4-6-2022

populations to sit on agency boards and coalitions. If not specifically designed for a priority population, do not include in this category.
- Provider/Clinic Education - Face to face or virtual education to providers, nurses, and/or clinic administration on the selected NPM or SPM.
- Requesting input/feedback - Meetings, communication, or events specifically for soliciting input or feedback; for example, getting input and feedback on grant activities from the local board(s) of health.

Result - Select the appropriate NPM, SPM or Foundational activity. For any of the above events in which the agency briefly discusses multiple result areas or the overall CAH program, select Title V Role & Services

Location - Select the location or the main partner of the event or meeting.
Quantity - Enter the number of people served or reached through the activity. At a provider office did you speak to 1 person or 5? At a health fair, how many people did you talk to at the event? Not how many people overall attended the event, or how many people picked up a pen. Social Media, how many people reposted or commented on your post. Total readership of community newsletter or newspaper not needed. Can leave blank for events where a count is not known.

Comment - Optional and can be used for additional details if needed by the agency. Note that comments will not show up in any reports.

Related Content -
- Add Organization - Select Organization from the drop down. Multiple Organizations can be added to an activity. If Organization is not available in the drop down and will be a frequent partner request Signify add to drop down.
- Add Provider - Select Provider from the dropdown. Multiple Providers can be added to an activity. If Provider is not available in the dropdown, request that Signify add providers that are not in the system.
- Add Goal/Assessment/Need/Referral/Survey/Document/Attachment - Optional, not included in reports.

DRAFT 4-6-2022

Number: 701
Title: EPSDT Program and Medicaid Administrative Fund Services
Effective Date: 10/01/2022
Revision Date:
Date of Last Review:
Authority:

Overview
The Early and Periodic Screening, Diagnosis, and Treatment (EPSDT) Program provides comprehensive health care for Medicaid enrolled clients under the age of 21. The EPSDT program was implemented in 1967 by the United States Congress. Every state's Medicaid program has an EPSDT Program; in Iowa, the program is also known as the EPSDT Care for Kids Program.

Contractors focus on activities of the Iowa EPSDT program including informing, care coordination, presumptive eligibility, and gap-filling screening in order to assist clients in getting to their medical home early and in the recommended time frames. Medical homes and specialists are primarily responsible for screening, diagnosis, and treatment. The acronym EPSDT stands for:

- **Early**: Children should receive quality health care beginning at birth and continuing throughout childhood and adolescence, including the identification, diagnosis and treatment of medical conditions as early as possible.
- **Periodic**: Children should receive well child visits at regular intervals throughout childhood and adolescence, according to the Iowa EPSDT Periodicity Schedule. Health care may be provided between regularly scheduled visits.
- **Screening**: Children should be screened for health, developmental and social-emotional concerns. Services should include health history, developmental and behavioral assessment, physical exam, immunizations, lab tests, nutrition/obesity prevention, OH exam, health education (anticipatory guidance), and vision and hearing screenings.
- **Diagnosis**: Children should receive further evaluation of health, developmental or social-emotional problems identified during well-child visits that may require treatment.
- **Treatment**: Children should receive treatment for health, developmental or social-emotional problems identified during well-child visits.

DRAFT 4-6-2022

In Iowa, DHS administers the Iowa Medicaid Program and therefore is the administrative agency for the EPSDT program. Through a formal written agreement, DHS engages IDPH to provide EPSDT informing, care coordination, presumptive eligibility, and related interpretation services for eligible clients. The Department fulfills this responsibility by contracting with local community based programs to work with clients in collaborative service areas. This is an arrangement unique to Iowa. These services are paid through Medicaid Administrative Funds (MAF) associated with the written agreement. As a result these services are frequently referred to as "MAF services".

Policy
Contractors are responsible for providing the following services to clients 0 to 21 years of age enrolled in Medicaid:

- Informing for all newly Medicaid enrolled clients

- Dental care coordination
- Medical care coordination for clients not enrolled in Medicaid managed care (Fee-For-Service or FFS).
- Well visit reminders for clients served in the past two years who are in the MCAH data system “Agency Home”.
- Presumptive eligibility.
- Interpretation services pertaining to these listed services.

Contractors are also responsible for providing these services for clients 0 to 22 years of age eligible for Title V (see 106 Child & Adolescent Health Program Eligibility & Voluntary Participation):
- Medical care coordination
- Dental care coordination
- Well visit reminders for clients served in the past two years who are in the MCAH data system “Agency Home”
- Interpretation services pertaining to these listed services

Contractors are required to have policies and procedures outlining how staff are to provide these services.

DRAFT 4-6-2022

Procedure
Staff skills and competencies needed to conduct EPSDT/Medicaid Administrative Funds (MAF) Services include:
- Cultural and linguistic competence to communicate the information in a meaningful way to all clients
- Relate to clients to encourage involvement in EPSDT services
- Assess client needs and refer to appropriate providers
- Understand the impact of the client’s culturally-related health beliefs
- Engage in a client/family-centered, strength-based approach
- Tailor informing services to address client choices, preferences, and special needs such as language barriers, low literacy levels, etc.
- Understand Medicaid and EPSDT programs, including the Iowa EPSDT Periodicity Schedule and dental periodicity schedule
- Understand immunization schedules for birth to 21 years old from the Centers for Disease Control and Preventions (CDC) Advisory Committee on Immunization Practices (ACIP)
- Ability to promote preventive care including immunizations
- Ability to promote medical and dental homes
- Knowledge of and ability to explain child and adolescent growth and development
- Establish and maintain linkages with local primary care providers and community resources

Motivational interviewer training is encouraged for all staff involved in providing EPSDT services.

Medicaid Administrative Fund Billing
The activities required for effective informing, care coordination, presumptive eligibility, and interpretation of those services may be included in a contractor’s Medicaid Administrative Fund

(MAF) billing to IDPH. MAF funds include all expenses and staff time spent doing informing, presumptive eligibility, care coordination (including dental), and related Interpretation. For example, care coordination is not just the time in and time out spent talking, emailing, or texting with the client; the agency can bill for the time spent looking up numbers, searching through resources, and making calls that do not get answered, etc. Expenses for printing, paper, phone service, etc., should also be included in the MAF monthly billing. In addition, these activities should be included in the time study – so the contractor may determine the full cost of services. Please be aware of the following exceptions to MAF billing:

- If the purpose of a home visit is to provide direct care services, home visit for care coordination cannot be billed.
- The entirety of the maternal health postpartum home visit is part of the maternal health services. Any care coordination on behalf of the baby is considered part of this postpartum visit. Do not bill child health care coordination for any part of this maternal health visit.

Required Resources for Implementation

- Contractor specific training on each service, policies, and procedures

Orientation and training on the statewide expectations, policies, and procedures for MAF services

DRAFT 4-6-2022

Number: 702
Title: Informing Services
Effective Date: 10/01/2022
Revision Date:
Date of Last Review:
Authority: Omnibus Agreement; CMS Medicaid Manual

Overview
The Early and Periodic Screening, Diagnosis, and Treatment (EPSDT) Program provides comprehensive health care for Medicaid enrolled clients under the age of 21. According to the federal Centers for Medicare and Medicaid Services (CMS) there are two important features of the EPSDT program: assuring the availability and accessibility of required health care resources, and helping Medicaid clients use these resources.

Through the process of "informing", the family is provided information about the services they are eligible for that are covered under Medicaid (i.e., the variety of medical, dental, and support services). The purpose of Informing is to educate and assist the client with understanding their Medicaid benefits and the importance of preventive medical and oral health care to improve client health outcomes throughout their life.

Policy
Contractors shall use clear and nontechnical language, provide a combination of written and oral methods to inform all eligible clients effectively describing what services are available under the EPSDT program; the benefits of preventive health care, where the services are available, how to obtain them; and that necessary transportation and scheduling assistance is available. Contractors shall provide quality Informing services for each newly enrolled Medicaid client from birth to 21 years of age in each county of the CSA. Informing services shall be provided timely and each month of the year.

Required Resources for Implementation
EPSDT Informing training

Procedure
Contractors shall:
1. Provide all three steps of the Informing service including an Initial Inform, Inform Follow-ups (if necessary), and Inform Completion.
2. Develop and annually review agency policies and procedures to assure the Informing services are meeting the needs of clients/families. Policies and procedures shall include detailed information on all three required steps of the Informing process and be consistent with Department guidelines.
    a. Clients and family members (as defined in Section 2.03B.1.b of the RFP) shall be included in the development and review of the policies and procedures regarding Informing, call/text scripts, and the contents of the Informing packet. Clients/families will be engaged to make recommendations for policy/procedures related to connecting with families, providing input in how families are communicated with, how to communicate information, and ensuring processes and information are family-centered.

DRAFT 4-6-2022

b. Develop and annually review age specific Informing scripts that comply with Department guidelines to be used when contacting clients. Ensure call and text scripts are vetted for relevance and understanding by clients/families.
   c. Develop and annually review a county specific resource directory for clients/families. The development and annual review of the resource directory should include clients/families (as defined in Section 2.03B.1.b of the RFP) The resource directory must meet the following criteria:
      i. Include county level resources for the county of residence of the client/family. The successful applicant may opt to include regional, state, and national resources.
      ii. Contain medical and dental providers taking Medicaid clients in the client's/family's county of residence.
      iii. All resources must be verified by the successful applicant at the time of review. Resources must include pertinent information such as location, hours of operation, and contact information, but should strive to provide more detailed information (e.g., Food Pantry: fresh fruit is available on the first Tuesday of the month, food often runs out by noon; Provider X speaks Spanish, etc.).
      iv. Contains information relevant to the health and social determinants of health (SDOH) for client's age birth to 21 years. Do not include a listing of businesses/organizations in the county that do not offer health/SDOH services to CAH clients, the listings should be relevant to the clients/families this program serves.

3. Provide informing services in the primary language of the client. Provide interpretation services for informing when needed. See 708 Interpretation Services Policy.
4. Coordinate care and facilitate access to community resources for clients/families based upon needs identified by them during the Informing process.
5. Engage in ongoing quality assurance and quality improvement activities related to Informing.
6. All CAH program services provided by the contractor or through subcontractors must be documented at the time of service and available to IDPH by the 15th of the month following the month of service.
7. If needing to check the Medicaid eligibility status of a client, contact the Iowa Medicaid Enterprise (IME) Eligibility Verification System (ELVS) at 800-338-7752 or 515-323-9639. Client eligibility can also be verified using the IME ELVS Web Portal.

Initial Inform:

1. In the first week of every month, contractors shall utilize a monthly Informing list filtered from the MCAH data system to identify all children/families eligible for the Informing service in their CSA. The report will give the child's name and contact information so the informing process can begin.
   a. Informing services are provided for the family unit rather than an individual client. Some clients have never been eligible for Medicaid while others may have received Medicaid benefits in the past. Any client who becomes eligible after being off Medicaid for the previous 90 days or more is considered to be newly eligible and shall receive Informing services.

DRAFT 4-6-2022

   b. Clients must be informed within the calendar month.
2. Contractors shall complete Initial Informing by mailing an introductory packet to the families of all newly enrolled Medicaid clients age birth to 21 years. This mailing shall include an initial welcome letter, Medicaid EPSDT brochure, I-Smile™ information, age-appropriate preventive health care education, and community resources the family may find helpful (e.g., health care providers and dentists accepting Medicaid, food pantries, Child Care Resource and Referral, mental health resources, etc.). The packet shall include contact information for the Contractor, and let the client know that the Contractor will be attempting to reach the family. Families have expressed that specificity about how and when to expect contacts will ensure better outcomes.

Inform Follow-Up:

1. Inform follow-ups are unsuccessful attempts to conduct an Inform Completion.
2. Contractors shall complete Inform Follow-ups by making phone, text and/or face-to-face attempts to reach the client/families with the goal of having a dialogue about the benefits available to them through Medicaid. Inform Follow-ups are required to use the following methods:
   a. A minimum of two attempts to contact the client/family must be made with at least one attempt during normal business hours (8:00 a.m. - 5:30 p.m. M-F) and at least one attempt outside normal business hours. (i.e., 7:30-8 a.m.; 5:30 p.m. - 9:00 p.m. and any time on weekends).
   b. A minimum of 25 hours per month outside normal business hours must be spent on Informing attempts to reach newly eligible families. CSA 8 must provide a minimum of 40 hours per month outside normal work hours. These hours must:
      i. Consist of staff actively making contact attempts and available live to answer calls/texts and/or in person visits.
      ii. Be communicated in the Initial Inform packet as times the client/family can expect calls, texts, or visits and that staff will be available to return calls and texts. Therefore, the hours must be scheduled in advance.
      iii. Must be spread over a minimum of four days per month.
3. At least one attempt must be a live phone call or an in person visit. Additional phone calls may be made including the use of technology assisted calling, however the option to be easily routed to a live person for Inform Completion must be available when the technology assisted calls are made.
4. Contractors may utilize text messaging provided that such messaging is HIPAA compliant and follows Department guidance. Texting may be used to either encourage the family to contact the Contractor or to accept the Contractor's call. No protected health information may be included in texts. Appropriate use of texting for Inform follow-ups would be similar to: "This is Mandy with (Name of Contractor), I am trying to reach you to discuss important information about your child's Medicaid coverage (or health insurance). Please call me at (phone number)" or I will be attempting to call you from this number". Texts must be sent from an agency device. No personal devices may be used.
5. If a phone number in the MCAH data system does not work, the Contractor shall attempt to locate a phone number through other resources including collaboration with other entities (such as WIC).
6. If the client cannot be reached by the above requirements, a follow-up written communication must be sent reinforcing components of the EPSDT program,

DRAFT 4-6-2022

encouraging use of preventive health care, and containing Contractor contact information. A follow-up postcard may be mailed, however postcards may not contain protected health information and must comply with HIPAA and Department laws and guidelines.

7. If repeated attempts to reach the client are unsuccessful, the Contractor may elect to release ownership of the client per Department and Contractor guidelines. Do not mark as 'unsuccessful', instead leave the client open in case of future contact. The client will automatically be marked 'unsuccessful' by the MCAH data system after 12 months.

Inform Completion:

1. Contractors shall conduct Inform Completion by having a conversation that includes the benefits of establishing a medical and dental home, the comprehensive array of services available through Medicaid including interpretation and transportation resources, the benefits and importance of preventive care, how and where Medicaid benefits can be used, and resources available in the community to address the social determinants of health. The following topics are to be discussed:
    a. How managed care and managed care assignments work, and the right to switch managed care companies.
    b. How to select a primary care provider with MCO coverage and the right to switch assigned primary care providers.
    c. Federal rules mandate that clients have the freedom to choose their health care/dental providers. To comply with these rules, Contractors must be prepared to discuss provider options with each client. Clients enrolled in Medicaid have the ability to choose a provider under their Medicaid status (Fee-for-Service or managed care). Clients must be informed of the financial consequences of choosing a non-Medicaid provider since Medicaid will not pay for services given by a non-Medicaid provider. A client's choice of a non-Medicaid provider should not be considered a refusal of services.
    d. All clients enrolled in Medicaid have the right to appeal Medicaid decisions such as their MCO/PAHP assignment, primary care provider assignment, etc. Information on filing an appeal can be found on the DHS website at www.dhs.iowa.gov/appeals. Clients who have questions specific to the appeal process may contact their DHS worker or the DHS Appeals Section at 515-281-3094. Clients wishing to appeal may also wish to contact an attorney or Iowa Legal Aid at 1-800-532-1275. In Polk County, clients may call 515-243-1193.
    e. Where screening services are available and how to obtain them.
    f. Encouraging and assisting the family to establish medical and dental homes for their children.
    g. Available support services available through the EPSDT program (such as transportation, translation, interpretation, and child care).
    h. Community resources to meet social determinants of health needs of the client/family.
2. Contractors shall use clear and nontechnical language, provide a combination of written and oral methods to inform all eligible clients effectively describing what services are available under the EPSDT program; the benefits of preventive health care, where the services are available, how to obtain them; and that necessary transportation and scheduling assistance is available.

DRAFT 4-6-2022

3. The goal for Inform Completions in each CSA is 75%.
4. Contractors may determine additional ways to successfully reach clients/families. Contractors are encouraged to work with clients/families and priority populations to determine additional or new ways to reach families, including partnerships with community organizations that are trusted and utilized by families.
5. Contractors shall notify the Department in writing within ten (10) calendar days of any circumstances which impact the Contractor's ability to provide the required Informing services.

Personnel:

1. Contractors are required to designate employees to carry out informing services. Staffing is dependent upon the number and needs of clients in the CSA. Staff need the following competencies to provide the Informing service:
    a. Communicate complex information in an understandable way using plain, non-technical language with clients. Utilize the client's primary language. Engage a qualified interpreter when needed. See 708 Interpretation Services Policy.
    b. Relate to clients to encourage involvement in preventive health care and to assess client needs and barriers.
    c. Be knowledgeable of community resources and refer to appropriate providers to meet client needs.
    d. Tailor informing services to address client choices, preference, and special needs such as language barriers, low literacy levels, and hearing or sight impairment.
    e. Understand the Medicaid program, including components of Iowa's Periodicity schedule.
    f. Understand the CDC and ACIP Childhood Immunization Schedules for birth through 18 year olds and be able to communicate the schedule to clients.
    g. Understand and explain child and adolescent growth and development.
    h. Establish and maintain linkages with local providers and community resources.

2. Develop and maintain a comprehensive contingency plan to provide Informing services in the event of staff vacancies and emergency situations. The contingency plans must be fully operational and implemented within 10 business days of a vacancy or emergency event. The plan shall include provisions for technology failure and inaccessibility (e.g., building flood/fire/unsafe structure, facility relocation, system hacking, etc.) and assures adequate staffing to provide the Informing service to all eligible clients every month of the year.
3. Train staff including CAH, Hawki Outreach, Early ACCESS, I-Smile™ and I-Smile™ @ School, subcontract staff and other staff who provide services to CAH clients in the Informing process and in utilizing the MCAH data system to document all steps of the Informing process in compliance with Department guidelines.
4. All staff, including subcontractors, performing the Informing process shall be trained on, and have access to the Informing scripts, policies, and procedures which shall include guidance on documentation of the Informing process in the MCAH data system.

See 201 Required Personnel Policy for additional requirements related to personnel.

DRAFT 4-6-2022

Documentation
Contractors must document each step of the Informing process in the MCAH data system for each newly eligible client in the family. The MCAH data system User Manual in the Document Library of the MCAH data system provides the specific guidelines for documenting services.

DRAFT 4-6-2022

Number: 703
Title: Care Coordination (Medical, Dental, Home Visit, Transportation, Interpretation)
Effective Date: 10/01/2022
Revision Date:
Date of Last Review:
Authority: Omnibus Agreement, IDPH Childhood Lead Poisoning Prevention Program

DRAFT 4-6-2022

Overview

The Title V program encourages clients to have medical and dental homes for continuity of care. The program assures that overall health is improved through periodic exams, early diagnosis, and appropriate treatment. Care coordination services help clients to:

- Overcome barriers to access health care
- Become independent health consumers
- Develop healthy beliefs, attitudes, and behaviors
- Make informed health care choices
- Establish and maintain medical homes and dental homes
- Improve their health, mental and physical well-being

Specific care coordination activities will depend on the needs and preferences of the client. The following list contains some of the possible activities:

- Assisting clients in accessing periodic well-child screenings and dental screenings
- Assisting in establishing medical and dental homes
- Assisting with scheduling appointments (outside of the Contractor agency)
- Assisting the client to prepare a list of questions or concerns prior to the medical or dental visit
- Following up to make sure the client received the care intended at the appointment
- Following up to reschedule missed appointments
- Assisting clients when referral for further care is needed
- Arranging support services such as transportation to Medicaid providers or interpreter services
- Monitoring medical and dental care plans
- Linking clients to other health-related community services

Policy

Contractors shall actively locate (not relying solely on clients/families self-identifying as needing care coordination) and provide care coordination to Title V clients, clients during the Presumptive Eligibility period, and clients enrolled in Medicaid Fee-For-Service (FFS) (clients not enrolled in a Managed Care Organization).

Procedure

1. Contractors shall develop and annually review policies/procedures and assure they are consistent with Department guidelines for care coordination. Contractors shall assure policies/procedures regarding documentation of care coordination in the MCAH data system follow required Department guidelines.
2. Care coordination shall include the following core elements related to Title V:

a. Assessment of medical and dental home, and assistance in establishing a medical or dental home if there is no current medical or dental home.
b. Assessment of immunization status utilizing IRIS or recommended vaccinations in the MCAH data system or the client's medical records at each contact. If the client's immunization history is not in IRIS, and client medical records are not available, parent/caregiver recollection may be used to assist the family in accessing immunizations. Include this information in the documentation.
c. Assistance in accessing any missing ACIP recommended vaccines.
d. Assessment of whether the child is current on well visits and dental screenings. Assistance in accessing a well visit and/or dental screening if due/overdue.

Follow up medical and dental care coordination to previous care coordination within 30 days, does not require the re-assessment of each of these elements. Professional judgment and circumstances guide reassessment during follow up care coordination. If it has been more than 30 days since the last contact or assessment of these core elements, reassess for additional care coordination needs related to these core elements. Note in documentation that the service is a follow-up care coordination.

If conducting targeted care coordination of an immediate need, assist the family as needed to meet their need. Pursue full medical and dental care coordination to assess core care coordination and assist with those needs, once the family's immediate need is met.

3. Contractors shall assist clients/families with health literacy by assessing their needs and then structuring education based on those needs to help them understand how insurance works, how to make appointments, how to obtain referrals or specialty care, the importance of preparing questions for the primary care provider, etc. In addition, help clients understand changes in coverage and processes involved in transitioning from one type of coverage to another. Provide additional education or assistance in understanding health literacy for priority populations, as needed.
4. Contractors shall build a referral network throughout the CSA of primary care providers to serve as medical homes, provide screening services and comprehensive well child visits to Title V clients, clients during the Presumptive Eligibility period, and clients enrolled in Medicaid Fee-For-Service. If the Contractor is a medical home or part of a system that serves as a medical home, the referral network must include providers outside their organization to provide choice to clients. Contractors shall provide equal opportunity to choose another organization for services, with equal support and assistance regardless of which provider is chosen.
5. Contractors shall build a referral network of community resources to meet the social determinant health needs of clients throughout the CSA.
6. Contractors shall provide care coordination in the primary language of the client and provide interpretation services for care coordination when needed. See 708 Interpretation Services Policy.
7. Contractors shall engage in ongoing quality assurance and quality improvement activities related to the care coordination process and documentation of care coordination entered into the MCAH data system.
8. Care coordination services are conducted via phone, back and forth text or email or face-to-face (in person or via technology) dialogue with Medicaid clients to assist them

DRAFT 4-6-2022

with Medicaid related services such as medical, dental, mental health, transportation, Child Health Specialty Clinics, AEA, etc.

9. Leaving a message, sending a text without a response from the client or mailing information is not care coordination.
10. As long as Medicaid related services/programs are addressed, linkage to non-Medicaid resources (such as child care, WIC, parenting programs, social services, legal services, food, clothing, housing, and shelter services) may also be included in the time spent with the client.
11. Contractors must have agency specific protocols that are consistent with Department guidelines for providing care coordination. Care coordination staff, clients, family members and priority population insights are important to guide the Contractor in making appropriate changes to services, protocols, and educational materials.
12. Contractors shall ensure materials are at an appropriate reading level and culturally appropriate for the client.
13. Contractors shall assist with arranging local transportation to Medicaid covered services for Medicaid Fee-For-Service clients, including clients during the Presumptive Eligibility period. Contractors can bill Medicaid for the transportation cost, and utilize Medicaid Administrative Funds to cover the care coordination.
14. Contractors shall arrange local transportation for Title V clients. Title V grant funds cover care coordination and the transportation expenses.
15. Clients enrolled in a Medicaid MCO may be referred to their MCO for care coordination services. See 601 Managed Care Organizations Policy
16. Children with special health care needs may be referred to Child Health Specialty Clinics (CHSC) for specialized care coordination. CHSC staff are skilled in coordinating client-centered care that is effective, convenient, and offers informed options to families.

DRAFT 4-6-2022

Care Coordination Home Visit for a High Blood Lead or Medically Necessary Condition

1. Most care coordination activities will involve talking to clients on the telephone or at the Contractor’s office, clinic setting, or approved telework site. However, a Contractor must be prepared to provide home visits to clients when needed.
   a. A home visit may be needed/indicated for a client that requires a medically necessary care coordination for a health related condition. Such necessity may include clients that lack phone service, or are otherwise hard-to-reach.
   b. Provide information about available medical services.
   c. Assist the client in making and coordinating appointments, barrier removal, and access to care.
   d. Utilize referral network to assist client in accessing services and social determinants of health
2. Each client with a blood lead level equal to or above 15 micrograms per deciliter (mcg/dL) must receive a skilled nursing visit. An RN may follow up on this high blood lead level by making a care coordination home visit to:
   a. Assess the client’s knowledge of lead poisoning and instruct the client regarding nutrition, cleaning, and other relevant issues.
   b. Evaluate the home for other children living or visiting routinely and, if appropriate, make arrangements for testing of those children.
   c. Assist the client in making and keeping follow-up appointments.

d. Remind the family to notify the client's lead program case manager if the family moves.
e. Remind the family to inform the client's current and future health care providers of the elevated lead level and any subsequent tests that may demonstrate a lower blood lead level.
See 604 Prevention and Early Intervention for Lead Poisoning and IDPH Childhood Lead Poisoning Prevention Program for more information on blood lead poisoning in children.

Personnel

1. Contractors are required to designate employees to carry out care coordination services. Staffing is dependent upon the number and needs of clients in the CSA. Staff need the following competencies to provide the Informing service:
    a. Communicate complex information in an understandable way using plain, non-technical language with clients. Utilize the client's primary language. Engage a qualified interpreter when needed.
    b. Relate to clients to encourage involvement in preventive health care and to assess client needs and barriers.
    c. Be knowledgeable of community resources and refer to appropriate providers to meet client needs.
    d. Tailor care coordination to address client choices, preference, and special needs such as language barriers, low literacy levels, culture, and hearing or sight impairment.
    e. Understand the Medicaid program, including components of Iowa's Periodicity schedule.
    f. Understand the CDC and ACIP Childhood Immunization Schedules for birth through 18 year olds and be able to communicate the schedule to clients.
    g. Understand and explain child and adolescent growth and development.
    h. Establish and maintain linkages with local providers and community resources.

2. Contractors shall train staff including CAH, Hawki Outreach, Early ACCESS, I-Smile™ and I-Smile™ @ School, subcontract staff and other staff who provide services to CAH clients in the care coordination and in utilizing the MCAH data system to document care coordination in compliance with Department guidelines.
3. All staff, including subcontractors, performing care coordination shall be trained on, and have access to the resource directory, referral network, policies, and procedures which shall include guidance on documentation care coordination in the MCAH data system.
4. All staff, including subcontractors performing care coordination shall be trained in motivational interviewing techniques.

See 201 Required Personnel Policy for additional requirements related to personnel.

Documentation

1. Contractors must document care coordination in the MCAH data system. The MCAH data system User Manual in the Document Library of the MCAH data system provides the specific guidelines for documenting services.
2. For targeted follow up care coordination notes that do not involve coordinating medical/dental care, the date of the last well visit, name of provider, and assessment of

DRAFT 4-6-2022

immunization status is not required. Indicate in the note if it is a follow-up care coordination service. Address any additional family needs.

3. If care coordination is provided for multiple clients in the family, document the care coordination in each client's record in the MCAH data system.

Number: 704
Title: Presumptive Eligibility for Medicaid and Hawki (Healthy Well Kids Iowa)
Effective Date: 10/1/23
Revision Date: 10/1/22
Date of Last Review: 2/22
Authority: Social Security Act Section 1902 [42 U.S. C. 1396a] OBRA 1986, PL 99-105, 9407

Overview
Presumptive Eligibility (PE) provides full Medicaid coverage for a limited time while a formal Medicaid eligibility determination is being made by the Department of Human Services. The goal of the Presumptive Eligibility process is to offer immediate health care coverage to individuals "presumed" to be eligible for Medicaid or Hawki (CAH only) before there has been a full Medicaid determination. The Presumptive period lasts until a formal determination is made (enrollment or denial), the application is withdrawn, or until the last of the month following the date of application. PE is based on a family's household income and a contractor must have a qualifying entity (QE) to enter a client's information into the Medicaid Presumptive Eligibility Portal (MPEP) APSP Login. The MPEP is a self-service portal that is used by an approved qualified entity for a Presumptive Eligibility (see below on becoming a Qualifying Entity). All pertinent documents relating to Presumptive Eligibility can be found on the Iowa Department of Human Services Presumptive Eligibility | Iowa Department of Human Services.

DRAFT 4-6-2022

Policy
Contractors shall assist clients in accessing Presumptive Eligibility clients through enabling services and the public health services and systems services of community and family outreach and education.

Policy for Medicaid and Hawki Eligibility for Children:
The Medicaid presumptive eligibility process ensures children are able to get immediate health care coverage to children (Medicaid is 167% of the Federal Poverty Guidelines) until a formal determination is made. (Hawki is 302% of the Federal Poverty Guidelines).

Policy for Medicaid Eligibility for Pregnant People:
The Medicaid presumptive eligibility process ensures pregnant people don't have a delay in obtaining prenatal care, needed medications, mental health care, or oral health care. The upper income limit considered in the determination for Pregnant People, is 375% of the Federal Poverty Guidelines. Proof of income is not required and unborn child(ren) is considered as an individual when determining household size.

Procedure
Becoming a Qualified Entity
- CSA's must have a Qualifying Entity who has been enrolled and trained by Iowa Medicaid Enterprise (IME) to become certified and authorized to make PE determinations. Each agency must complete the Application for Certification to Become a Qualified Entity (QE). Complete the Application for Certification to become a Qualified Entity (QE).

- Contractors will check the box to receive future relevant provider information to the email listed on the application. Iowa Medicaid Enterprise will send out newsletters and other very important announcements to the email provided if the box is selected.
- Once approved, Contractor staff and subcontractors will:
    a. Review the Medicaid Presumptive Eligibility Policy and MPEP Training
    b. Request access to MPEP by completing the Qualified Entity Medicaid Presumptive Eligibility Portal (MPEP) Access Request Form. The Access Request Form will set the Contractor up to obtain usernames and passwords for MPEP. Once staff have completed the training, received usernames and passwords, and signed the MOU, they may begin to provide PE.

Qualifying for PE for clients (children)

- Contractor will work with clients who are eligible either for Hawki or Medicaid based on their circumstances and income.
    - Iowa residents under 19 years of age may qualify for Presumptive Eligibility if they are a U.S. citizen or lawful permanent alien, and meet income guidelines.
    - Additional Iowa residents may qualify. The individuals are U.S. citizens or lawful permanent aliens, meet income guidelines and are:
    - Parents or caretaker relatives, former foster care children under the age of 26 Individuals 19 through 64
    - Only one PE application may be completed in any 12 month period.
    - Families will benefit from Contractors including other adults in the family in a child or maternal PE application. Contractors are encouraged to provide this service to family members of MH and CAH clients. .
    - Parents may not be State of Iowa employees.

Qualifying for a PE for Pregnant People

- Contractor will work with pregnant people who do not need to prove legal status for presumptive eligibility, however it is a requirement for ongoing Medicaid coverage. All PE groups, not just pregnant women, can request their application be sent for ongoing Medicaid determination. Citizenship requirements remain for non-pregnant applicants, and they must still answer questions about citizenship and immigration status.

Conducting a PE:

- A contractor who is QE will have a username and password into the self-service Medicaid Presumptive Eligibility Portal (MPEP) APSP Login.
- The QE submits all proper information into the portal and once information is submitted, DHS will approve or deny based on information provided. If the paper application is completed, it must be entered into MPEP by the QE. There is a significant difference between the paper application and electronic MPEP application, allowing time to enter the application. Enter all information provided by the family, only certain fields are required, but entering all information provided will help with application processing further down the road. A family does not need to answer non-required elements for PE.
- Use and promote the Self-Service Portal (online) to see if clients are eligible for APSP Login.

DRAFT 4-6-2022

- The number of babies expected by a pregnant person is not marked as required, however the application will be denied if this is not entered correctly (needs to be at least 1).
- A social security number is required for a child, but not the parent. Therefore, if the parent does not have a social security number, the application will not be affected or denied.
- Once a contractor has all the information entered into MPEP, eligibility can be determined. If the eligibility is not what was expected, go back through the application to ensure all information was entered correctly.
    - To fully submit the application, you must accept the PE results
    - After accepting the results, the option to print the Notice of Award (NOA) and application summary are available. Print both and provide a copy to the client and place a copy in the client's file. This is the only opportunity the QE will have to print the NOA and summary.
    - If the application was entered directly into MPEP, the applicant should sign the printed summary.
    - Document PE enabling and direct service into the MCAH Data System. Care coordination shall take place with all PEs to provide families with information on the support services available through EPSDT and resources in their community, as well as care coordination to health care services.

Billing: Contractors receiving MAF funds to provide presumptive eligibility services can bill CAH MAF or Maternal Health MAF for completing PE applications for children up to age 21 and pregnant individuals.

Issues with Presumptive Eligibility: A provider having problems with or questions about PE, please contact the IME MPEP Support desk imempepsupport@dhs.state.ia.us or call the DHS help desk at 1-855-889-7985. Please note that the phone number for the DHS help desk is the same number used for all programs, so there may be a delay when using this line.

Number: 705
Title: Hawki (Healthy Well Kids in Iowa) Children's Health Outreach
Effective Date: 10-1-2022
Revision Date:
Date of Last Review:
Authority: Title XXI of the Social Security Act 1902 [42 U.S. C. 1396a] OBRA 1986, PL 99-105, 9407

Overview
The Department and the Department of Human Services (DHS) partner through a mutual Omnibus agreement under which specific funds are allocated through the Maternal, Child and Adolescent Health (MCAH) agencies through their Title V funding. This partnership's main role is to provide oversight for statewide Hawki community-based grassroots outreach. Hawki Outreach is the conduit to the local community to provide healthcare coverage for those uninsured, it builds and strengthens local infrastructure through partnership development, community engagement and promotion and distribution of Hawki materials. Please refer to section 705 of the Administrative Manual.

DRAFT 4-6-2022

Policy
Contractors shall assist clients in accessing healthcare through enabling services and the public health services and systems services of community and family outreach, education, and Hawki promotion.

Procedure
Contractors shall:
- Assure Hawki outreach is the premier community partner at all local community events educating the public on healthcare coverage for underserved and uninsured populations.
- Assure each CSA is fully staffed appropriately to provide outreach to the underserved and uninsured populations.
- Assure Hawki Outreach is building strong partnerships with required populations including:
  - Schools
  - Faith-based organizations,
  - Priority populations (i.e., non-profit organizations e.g. EMBARC, special population community leaders, etc.),
  - Employees without access to employer-sponsored health insurance.
- Assure Hawki Outreach is providing critical Presumptive Eligibility to the required populations including:
  - Schools,
  - Faith-based organizations,
  - Priority populations (i.e., non-profit organizations e.g. EMBARC, special population community leaders, etc.),
  - Employees without access to employer-sponsored health insurance.
- Assured Hawki outreach is being visible in their promotion on social media platforms and that Hawki brochures are being distributed out to all communities in the CSA.
- Assure Hawki outreach has strong partnerships with other IDPH departments.

- Ensure environmental scans are conducted in CSA’s with highest uninsured rates that includes CSA’s 6, 9, 10 and 15 to identify populations that are impacting high percentages of uninsured children.

Number: 706
Title: Hawki (Healthy Well Kids in Iowa) Outreach Coordinator
Effective Date: 10-1-2022
Revision Date:
Date of Last Review:
Authority: Title XXI of the Social Security Act 1902 [42 U.S. C. 1396a] OBRA 1986, PL 99-105, 9407

Overview
The Healthy and Well Kids in Iowa (Hawki) is Iowa's part of the federal Children's Health Insurance Program or referred to as (CHIP). This federal/state partnership provides critical medical and dental health care coverage to clients/families who don't qualify for traditional Medicaid, but can't afford private coverage. The Department and the Department of Human Services (DHS) partner through a mutual Omnibus agreement under which specific funds are allocated through the Maternal, Child and Adolescent Health (MCAH) agencies through their Title V funding. This partnership's main role is to provide oversight for statewide Hawki community-based grassroots outreach and employment of a Hawki Outreach Coordinator. See Hawki Outreach Coordinator job description.

DRAFT 4-6-2022

Policy
Hawki Outreach Coordinator (HOC) Role:
- Access to HOC will build local public health system capacity and ensure critical enabling and population-based services.
- Build partnership with required populations including schools, faith-based organizations, priority populations and employees without access to employer-sponsored health insurance to increase Hawki awareness.
    - Develop partnerships with school and school staff, outreach in school settings, parent/teacher conferences, back-to-school events, etc.
    - Faith-based organizations including: different faith groups, denominations, etc.
    - Priority populations - outreach may include working with non-profit organizations like EMBARC, Iowa International Center, Catherine McAuley Center
    - Employers without access to employer-sponsored health insurance
- Participating in community events and meetings to educate about Hawki benefits
- Assure the staffing of a Hawki Outreach Coordinator (HOC) in each of the CSA.
- Assure HOC will complete required reports and attend required meetings.
- Assure HOC will be a qualified entity to conduct Presumptive Eligibility throughout the CSA and to required populations Outreach and PE to the required populations:
    - o Schools,
    - o Faith-based organizations,
    - o Priority populations
    - o Employees without access to employer-sponsored health insurance
- Assure HOC will be required to meet with a minimum of 16 entities *per month* to provide Hawki Outreach and Presumptive Eligibility. Applicants must meet with each of the following;
    - Schools,
    - Faith-based organizations,
    - Priority populations

    - Employees without access to employer-sponsored health insurance
- Assure HOC in each county in the CSA is required to be visited at least three times a year for Hawki Outreach and to provide PE
    - Required to spend a minimum of 65% of their Hawki Outreach funds on staff providing Hawki Outreach and PE in the community (outside the contractor/subcontractor agency and service sites). Applicants are required to spend a minimum of 25% of this staff time conducting outreach and PE outside regular business hours (8:00 a.m. to 5:30 p.m. M-F).
    - Required to be a Qualified Entity: Applicants are required to maintain at least one staff person who is a Qualified Entity to provide PE throughout the CSA.
- Assure HOC in each county in the (CSA), the HOC will have to visit at least three times a year for Hawki Outreach and to provide PE
- Assure HOC will be required to spend a minimum of 65% of their Hawki Outreach funds on staff providing Hawki Outreach and PE in the community (outside the contractor/subcontractor agency and service sites). They are required to spend a minimum of 25% of this staff time conducting outreach and PE outside regular business hours (8:00 a.m. to 5:30 p.m. M-F).
- Assure HOC will promote and distribute Hawki materials**:** Hawki/Medicaid on social media platforms and distribute Hawki brochures, information (both in English and Spanish).
- Assure HOC will promote Hawki/Medicaid on their website and social media platforms
    - Distribution of Hawki brochures, information (both in English and Spanish) about Hawki/Medicaid and income guidelines to the required populations. Outreach materials may be distributed as hard copies and/or electronically.
- Assure HOC will partner with other Department Programs: Hawki Outreach Coordinator will be in close collaboration with Department programs, including 1st Five, WIC, I-Smile™, and CCNC to provide outreach and follow-up on clients without health insurance. They shall assess eligibility for Medicaid/Hawki for all clients receiving services and indicating they do not have insurance or adequate insurance, and shall provide PE or care coordination to assist with accessing health insurance.
- Assure HOC in CSAs 6, 9, 10, and 15 will have to do an environmental scan. Each of these CSA's had the highest uninsured rates of children and adolescents in the state. Each of these CSAs will conduct an environmental scan by February 28, 2022, to identify populations that are impacting the high percentage of uninsured children in the counties listed in Figure 1 below. Environmental scan results will be used in subsequent years of the project period to develop specific outreach activities. A template will be provided to the successful applicants to report the subsequent data to the Department. **(See Figure 1)**

DRAFT 4-6-2022

Figure 1

CSA	Counties (percent of children uninsured)
6	Floyd (11.5%)
9	Taylor (7.3%)
10	Wayne (18.2%); Chickasaw (11.5%); Allamakee (11.1%); Clayton (10.1%)

15	Davis (42.3%); Van Buren (17.3%); Appanoose (10%)

Providers
MCAH contract agency trained program staff.

Required Resources for Implementation
Each CSA will staff a Hawki Outreach Coordinator that best meets the needs of their CSA

Procedure
The Hawki Outreach Coordinator may discuss following topics:

- Summary of benefits covered by the MCO's (Managed Care Organizations) that participate in the Hawki program which includes the same as Medicaid and can be found through Iowa Health Link .IA Health Link | Iowa Department of Human Services.
- Determining eligibility and cost with a client (if the family's income falls within 302% of federal poverty guidelines.
- Cost to the family. It depends on the income level of the family. Some families pay nothing while others may pay $10-$20 per child a month. However, no family pays more than $40.00 per month regardless of the number of children in the family who are enrolled.
- When an application is approved, the child will be enrolled for 12 months. If the child turns 19, or is no longer eligible for another reason, Hawki will end before the 12 months have passed. The individual will be referred to the Marketplace or the adult program of Medicaid (if qualified) for Iowa Health and Wellness Plan. This is for individuals between the ages of 19-64 who are not pregnant and do not earn more than 133% of the Federal Poverty Rate.

DRAFT 4-6-2022

Number: 707
Title: Eligibility and Applying for Medicaid and Hawki
Effective Date: 10/1/2022
Revision Date: 10/1/2022
Date of Last Review:
Authority: Iowa Administrative Code 641 IAC 76.7 (135)

Overview
Increasing the number of children and adolescents to obtain and have access to quality and affordable health care coverage either through Medicaid or Hawki. There are three main coverage groups.

- Iowa Health Link (coverage through Managed Care Organization (MCO)
- Medicaid Fee-For-Service (FFS)
- Hawki

The Title V agencies (CSA's) partner with the Department of Human Services and clients in obtaining health care coverage through the Iowa Health Link and Hawki. In addition, there is Hawki dental coverage through Hawki Dental Only option. This option allows for free or low-cost dental only coverage for children who just need dental coverage and not medical. Benefits are provided only by Delta Dental of Iowa https://dhs.iowa.gov/hawki/dental Medicaid children receive dental benefits through the Pre-Ambulatory Health Plans which include Delta Dental of Iowa and Managed Care of North America (MCNA).

Policy
Contractors shall assist clients in accessing health care coverage through enabling services and public health services and systems of community through outreach, education and promotion of available health care coverage through either Medicaid or Hawki.

1. Hawki eligibility includes the following:
    - Up to the age 19
    - Resident of Iowa
    - Citizen of the U.S. or qualified alien
    - Family that meets Hawki income limits
    - Not a dependent of the State of Iowa employee
    - Not covered under the Medicaid program
2. Hawki financial requirements:
    - No family pays more than $40 a month
    - Some families pay nothing at all
3. Medicaid eligibility includes the following
    - Children under the age of (0-21).
    - Resident of Iowa
    - Citizen of the U.S. or qualified alien
    - Children on Medicaid pay nothing for their health care coverage.
    - Dental health care coverage for

Procedure

- Contractors assist and educate clients who may be eligible for Medicaid or Hawki. Application for Health Coverage and Help Paying Costs may be found online at a Self

DRAFT 4-6-2022

Service Portal Home Page. It is used to apply for health care coverage either for Medicaid or Hawki.

- Use and promote the Self-Service Portal (online) to see if clients are eligible.
- Contractors verify that applications are first screened for Medicaid eligibility. If over income guidelines for Medicaid, review to see if the client might be eligible for Hawki.
- Applications are reviewed by DHS Eligibility to see if the family qualifies for either Medicaid or Hawki.
- Contractor educates clients on how important it is to watch their mail from DHS. All Medicaid or Hawki information e.g. medical cards are mailed directly to the client's home address.

Other types of Medicaid which Contractors may need to know include the following:

HIPPP (Health Insurance Premium Payment Program):
HIPP is for Iowans who are working in lower paying jobs and can't afford to pay the premium for their company's insurance plan. The program helps pay the premium on your employer's insurance plan and keep you covered. Health Insurance Premium Payment Program | Iowa Department of Human Services.

MKSN (Medicaid for Special Needs Kids):
MKSN are children who are enrolled in the Iowa Health Link managed care program and they are able to receive coverage through an MCO (Managed Care Organization) of their choice. Medicaid for Kids with Special Needs (MKSN) | Iowa Department of Human Services

NEMT (Non-Emergency Medical Transportation):
NEMT is for members who are fully covered by Medicaid and are in assistance of travel reimbursements or ride to medical appointments. Non-Emergency Medical Transportation (NEMT) | Iowa Department of Human Services

Title: Medical Transportation
Billing Code(s): Non-emergency bus A0110; Non-emergency taxi A0100; Non-emergency wheelchair van A0130; Non-emergency by volunteer A0090; Non-emergency mini-bus/transportation system A0120; Parking fees, tolls A0170
Effective Date: 10/01/2022
Revision Date:
Date of Last Review:
Authority:

Overview
Medicaid non-emergency medical transportation (NEMT) is an important benefit for clients who need to get to and from medical services but have no means of transportation, this can include:

- Not having a valid driver's license;
- Not having a working vehicle available in the household;
- Being unable to travel or wait for services alone; or
- Having a physical, cognitive, mental, or developmental limitation.

Policy
To help ensure that Medicaid members have access to medical and dental care within the scope of the program, contractors will arrange non-emergency medical transportation (NEMT) for Medicaid eligible non-MCO enrolled clients and Title V eligible clients.

Procedure
NEMT for Medicaid eligible non-MCO enrolled clients and Title V eligible Clients

1. Contractors are eligible for reimbursement of non-emergency medical and dental local transportation when they arrange or provide the transportation, using the service codes listed for eligible clients.
2. The transportation must be to a Medicaid-enrolled provider for a Medicaid covered service on the day of the Medicaid covered service to be eligible for reimbursement.
3. Transportation must be in compliance with state laws (i.e., using child car seats) and must be the most appropriate for the circumstances of the family.
4. Contractors must maintain documentation of transportation service

DRAFT 4-6-2022

Documentation
Complete in the MCAH data system:

1. First and last name of service provider & credentials
2. The invoice of cost for the transportation service must be accessible. This may be reported in the 'Comments' field or maintained on a transportation log.
3. If the Title V agency keeps a service log containing key information, the 'Comments' in the MCAH data system must include a reference to this record.

Billing

1. The following are billable codes for billing IME for Medicaid fee-for-service (non-MCO) clients. This includes clients on presumptive eligibility:
    a. Code A0110: Non-emergency bus (per round trip)
    b. Code A0100: Non-emergency taxi (per round trip)

c. Code A0130: Non-emergency wheelchair van (per round trip)
d. Code A0090: Non-emergency by volunteer (per mile)
e. Code A0120: Non-emergency mini-bus or non-profit transportation system (per round trip)
f. Code A0170: Parking fees, tolls

2. Local transportation billed should align with the agency's transportation plan.
3. Bill actual cost of transportation for the date the transportation was provided to the health related appointment.
4. There is no payment for the transportation service if the client does not show up for the ride.

NEMT for Medicaid eligible MCO enrolled clients

NEMT for Medicaid eligible MCO enrolled clients is facilitated through a transportation broker contracted by DHS or the MCO for transportation services for clients.

- Access2Care is the transportation broker for Medicaid fee-for-service (non-MCO) clients. They arrange and pay for transportation (both in-town and out-of-town) to Medicaid covered services. For information about their policies and processes, visit their website or call them at 866-572-7662.
- Each Medicaid MCO has their own transportation broker for serving MCO enrolled clients:
  - Amerigroup: Access2Care Logisticare at 844-544-1389
  - Iowa Total Care: Access2Care at 833-404-1061
- When a member needs transportation or reimbursement for transportation, the member must contact the broker 72 business hours in advance for approval and scheduling.

Title: Interpretation Services
Billing Code(s): Sign language or oral interpretive services - T1013; Telephonic oral interpretative services - T1013UC
Effective Date:
Revision Date:
Date of Last Review:
Authority: Section 1557 of the Patient Protection and Affordable Care Act; 45 CFR § 92.101

Overview
More than 25 million Americans speak English "less than very well," according to the U.S. Census Bureau (2014). This population is less able to access health care and is at higher risk of adverse outcomes such as drug complications and decreased patient satisfaction. Title VI of the Civil Rights Act mandates that interpreter services be provided for patients with Limited English Proficiency (LEP) who need this service, despite the lack of reimbursement. Changes in 2016 to Section 1557 of the Affordable Care Act (ACA) significantly changed the requirements for medical interpretation. Contractors must assure they are in compliance with Section 1557 and the most current version of the regulations implementing this Act.

DRAFT 4-6-2022

Policy
Contractors will ensure that persons with LEP have meaningful access and an equal opportunity to participate in services, activities, programs and other benefits. Contractors shall also provide for communication of information contained in vital documents, including but not limited to, waivers of rights, consent to treatment forms, financial and insurance benefit forms, etc.

All interpreters, translators, and other aids required by federal law shall be provided without cost to the person being served, and clients and their families will be informed of the availability of such assistance free of charge.

Qualified interpreters (see below for definition) must be used for medical interpretation and may include staff interpreters, contracted interpreters, formal arrangements with local organizations providing interpretation or translation services, or video/telephone interpretation services.

Minor children and adult family members are prohibited from serving as medical interpreters. The two exceptions to this rule allow (1) for minor children to interpret or facilitate conversation only in an emergency involving an imminent threat to safety or welfare and if a qualified interpreter is not available; or (2) for an adult accompanying an individual with LEP to interpret or facilitate conversation only in an emergency involving an imminent threat to safety or welfare and if a qualified interpreter is not available; or if the individual with LEP specifically requests that the adult interpret or facilitate conversation, the adult agrees, and reliance on the adult is appropriate under the circumstances. (Source: Section 1557 of ACA).

Procedure

Identifying persons with LEP and their language: Contractors will promptly identify the language and communication needs of all clients. If necessary, staff will use a language identification card (or "I speak cards," available online at www.lep.gov) or posters to determine

the language. In addition, when records are kept of past interactions with clients or family members, the language used to communicate with the client will be included as part of the record.

Obtaining a qualified interpreter: Contractors are responsible for maintaining an accurate and current list showing the name, language, phone number and hours of availability of contracted interpreters or qualified staff interpreters (not just bilingual staff who have other duties). A "qualified interpreter" is defined as an interpreter who "via a remote interpreting service or an on-site appearance":

1. adheres to generally accepted interpreter ethics principles, including client confidentiality;
2. has demonstrated proficiency in speaking and understanding both spoken English and at least one other spoken language; and
3. is able to interpret effectively, accurately, and impartially, both receptively and expressly, to and from such language(s) and English, using any necessary specialized vocabulary and phraseology.

Qualified bilingual/multilingual staff: Qualified bilingual/multilingual staff is defined as "a member of a provider's workforce who is designated to provide oral language assistance as part of the individual's current, assigned job responsibilities and who has **demonstrated**" [emphasis supplied] that he or she is proficient in speaking and understanding both spoken English and at least one other spoken language, including any necessary specialized vocabulary, terminology, and phraseology, and is able to effectively, accurately, and impartially communicate directly with individuals with limited English proficiency in their primary languages.

Sign language interpreters should be licensed pursuant to 645 IAC 361.

DRAFT 4-6-2022

Minors as interpreters: Minor children are banned from serving as medical interpreters. The only exception to this rule is "an emergency involving an imminent threat to the safety or welfare of an individual or the public where no qualified interpreter is immediately available." However, since most leading national telephone and video remote interpreting companies can make qualified interpreters available in hundreds of languages within seconds, this exception should be regarded as limited.

Family/Friends as interpreters: Adult family members and friends are prohibited from acting as medical interpreters. However, there are two allowable exceptions to this general rule. First, adult family members and friends may be used as medical interpreters in an emergency involving an imminent threat to the safety or welfare of an individual or the public where there is no qualified interpreter is immediately available. Second, adult family members and friends may be used as medical interpreters where the LEP person "specifically requests that the accompanying adult interpret or facilitate communication and the accompanying adult agrees to provide such assistance." However, the rule makes plain that providers are not relieved of their legal duty to provide a qualified medical interpreter where an LEP patient elects to use an adult family member or friend since even then, "reliance on that adult [family member or friend must be] appropriate under the circumstances."

Providing written translations: Contractors will provide translation of written materials, if needed, as well as written notice of the availability of translation, free of charge, for clients.

Written translators must:

1. Adhere to generally accepted translator ethics principles, including client confidentiality;
2. Have demonstrated proficiency in writing and understanding both written English and at least one other written non-English language; and
3. Be able to translate effectively, accurately, and impartially to and from such language(s) and English, using any necessary specialized vocabulary, terminology and phraseology.

Public/patient notice requirement: Contractors will inform clients of the availability of language assistance, free of charge, by providing written notice in language clients will understand. Contractors must provide a notice encompassing seven factors, including that the entity does not discriminate (on the basis of national origin, immigration, language and disability and other factors) and that it provides appropriate interpreters and auxiliary aids and services, free of charge, to ensure effective communication for individuals who are LEP or have a disability. These notices must include taglines in the top 15 languages spoken nationally. These notices must be included in "significant publications" and posted in "conspicuous physical locations where the entity interacts with the public." In particular, such notices must be accessible from the organization's website.

Medicaid requirements: In order for interpretation services to be covered by Iowa Medicaid, the services must meet the following criteria:

1. Provided by interpreters who provide only interpretive services.
2. Interpreters may be employed or contracted by the billing provider.
3. The interpretive services must facilitate access to Medicaid covered services.

Providers may only bill for these services if offered in conjunction with an otherwise Medicaid covered service. Medical staff that are bilingual are reimbursed only for their medical services, not for the interpretation services they provide.

DRAFT 4-6-2022

Documentation of the service: The billing provider must document in the client's record the:

1. Interpreter's name or company,
2. Date and time of the interpretation,
3. Service duration (time in and time out), and
4. Cost of providing the service.

Billing interpreter services: Follow these guidelines for billing interpreter services:

1. For medical services bill code T1013
    a. Used for oral or sign language interpretation.
    b. For telephonic interpretive services use modifier "UC" to indicate that the payment should be made at a per-minute unit.
    c. The lack of the UC modifier will indicate that the charge is being made for the 15-minute face-to-face unit.
    d. Enter the number of minutes actually used for the provision of the service. The 15-minute unit should be rounded up if the service is provided for 8 minutes or more. Because the same code is being used but a conditional modifier may be necessary, any claim where the UC modifier is **not** used and the units exceed 24 will be paid at 24 units.
2. For dental services bill code D9990 - documenting verbal or sign language interpretation services.

    a. Interpretation is only billable when provided in conjunction with a direct dental service. In addition, the service must be face-to-face (not telephonic) and is billable one time per day, per member (no longer billed in 15 - minute increments).
    b. For information on access to telephonic translation services, please refer to the contact information for each dental plan administrator:
        i. IME Provider Services Unit: 1-800-338-7909
        ii. Delta Dental of Iowa (DDIA) Provider Services: 1-800-472-1205
        iii. Managed Care of North America (MCNA) Provider Services 1-855-856-6262.
3. Billable interpretation services are provided by interpreters who provide **only** interpretation services. Agency staff with other roles cannot have split FTEs that include billable interpretation.
4. Interpreters are either employed or contracted by the contractor billing the services.
5. Service providers who are also bilingual are not reimbursed for interpretation, only for their medical/dental services.
6. Interpretation services must facilitate access to Medicaid covered services. Providers may bill Medicaid only if the services are offered in conjunction with another Medicaid covered service.
7. Contractors may bill IDPH for interpretation services during care coordination, informing, and presumptive eligibility using MH and CAH MAF funds.
8. Medicaid does not reimburse for written translation of printed documents. Written translation of printed documents used during care coordination, informing, and presumptive eligibility may be billed to IDPH using MAF funds.

Documentation: Document in the MCAH data system:
1. Document in medical record. Include the service for which the interpretation was provided, the name of the interpreter or company, and the cost of service.
2. If the Title V agency keeps a service log containing the above information, the 'Comments' in MCAH data system and medical record must include a reference to this record.

Title: Well-Child Exam Reminders
Effective Date: 10/01/2022
Revision Date:
Date of Last Review:
Authority:

Overview
Providing well child exam reminders based on the EPSDT *Care for Kids* Periodicity Schedule is a responsibility of Contractors. A report that includes these populations comes from signifyCommunity™ to the contract agency at the first (1) of the month. This identifies clients to be reminded of upcoming well child exams.

Policy
Contractors shall remind eligible clients about upcoming or overdue well child exams.

Procedure
1. Clients eligible for well child exam reminders are those enrolled in Fee-For-Service Medicaid and clients enrolled in Title V served in the last two (2) years in the Contractor's 'Agency Home' in the MCAH data system.
2. A report that includes these populations comes from the MCAH data system and is available to the contractor around the first (1) of the month. This identifies clients to be reminded of upcoming well child exams.
3. If well child exam reminder is conducted by phone conversation with client, texting to and from client, or face-to-face this may be categorized as care coordination if care coordination is provided. See 703 Care Coordination Policy.
4. If well child exam reminder is conducted by mailing a letter or postcard, sending a text message that is not responded to by the client, leaving a voicemail message, or by phone, text or in person but care coordination is not provided. This is entered into the MCAH data system as a 'Task' – 'Send/Give Educational Materials'.

DRAFT 4-6-2022

Documentation
See the MCAH data system User Manual for guidance on documenting this service

Billing
- Contractors may use MAF to cover expenses related to the well visit exam reminder for clients enrolled in Medicaid.
- Contractors may use Title V funds to cover expenses related to the well visit reminder for clients enrolled in Title V. See Child & Adolescent Health Program Eligibility & Voluntary Participation for Title V eligibility.

Number: 800
Title: Adolescent Tobacco, Alcohol & Drug Use Assessment
Billing Code(s): Annual Alcohol Screening - H0049; Initial Alcohol Misuse Annual Screening - G0442; Caregiver Risk Assessment - 96161
Effective Date: 10/01/2022
Revision Date:
Date of Last Review:
Authority:

Description in Brief
Screening, Brief Intervention and Referral to Treatment (SBIRT) is a comprehensive, integrated, public health approach for early identification and intervention with clients whose patterns of alcohol and/or drug use put their health at risk. This is for unhealthy alcohol and other substance use which includes the full spectrum of unhealthy use from risky use and/or substance use disorder (abuse and dependence). SBIR screening may include - brief intervention, for those who screen positive, which includes administration of the following:

- Annual Alcohol Screen - Code H0049
    - CRAFFT for adolescents under age 18 years
        - Administration of the tool
        - Brief intervention
- SBIRT for clients age 18 to 21 years - Code G0442
        - Two question prescreen
        - AUDIT - Alcohol Use Disorders Identification Test **AND/OR** DAST – Drug Abuse Screening Test
        - Brief intervention
- Brief intervention must be provided by an RN or social worker (BSW or licensed).
- Brief intervention is a required component of the service. It incorporates principles of motivational interviewing.
- For Code G0442, time in and time out are required for a minimum of 15 minutes of service.
- For Codes H0049 or 96161, report the total time of the service (duration).
- Codes G0442 and H0049 cannot both be billed for the same day for the same client.
- Codes G0442 and H0049 cannot be billed in conjunction with Code 99408.

DRAFT 4-6-2022

Overview
The CRAFFT is the most well studied adolescent substance use screening tool and has been shown to be valid for adolescents from diverse socioeconomic and racial/ethnic backgrounds. It is recommended by the American Academy of Pediatrics Bright Future Guidelines for preventative care screenings and well-visits, the Center for Medicaid and Children's Health Insurance Plans (CHIP) Early and Periodic Screening, Diagnostic and Treatment (EPSDT) program and the National Institute of Alcohol Abuse and Alcoholism (NIAAA) Youth Screening Guide.

Early age of first use of alcohol and drugs can increase the risk of developing a substance use disorder during later life, making prevention and early intervention a promising strategy for identifying substance misuse before more serious problems develop. Effective screening is meant to assess whether a longer conversation to assess the context of use, frequency, and

other risks and consequences of alcohol and other drug use is warranted.

Policy

Risk assessment for tobacco use including vaping (e-cigarettes), alcohol, and drug use is required for all visits for youth 11 through 20 years of age. Contractors shall have an individual order by a primary care provider, or the client shall meet the criteria of the standing order signed by the medical director for the screening.

Required Credentials

RN or social worker (BSW or licensed).

Screening Tools

Use a structured interview designed to detect serious substance use in adolescents, such as the CRAFFT screener or SBIRT.

1. SBIRT = Screening, Brief Intervention, and Referral to Treatment. SBIRT includes:
    a. 2-question pre-screen
2. The CRAFFT includes:
    a. Administration of the tool
    b. Brief intervention
3. AUDIT - Alcohol Use Disorders Identification Test
    a. Administration of the test
    b. Brief intervention

Caution: Although the SBIRT tool indicates that <3 drinks a day for women is low risk, encourage women who think they might be pregnant or are pregnant not to drink any alcohol. There is no known safe amount of alcohol consumption for pregnant women.

DRAFT 4-6-2022

Procedure

Recognize the importance and complexity of confidentiality issues. Providing a place where the adolescent can speak confidentially is associated with greater disclosure of risk behavior involvement. Consider using a paper survey or computerized version before the adolescent meets with the provider. Time alone with the provider during the visit is associated with greater disclosure of sensitive information.

1. During the intake process, assess alcohol and drug use.
2. If there is a positive response to either the alcohol or drug use question, proceed to having client complete full screenings as indicated below:
    a. AUDIT - screening for alcohol use for clients 18 years and older
    b. DAST - screening for illicit drug use for adult clients
    c. CRAFFT - screening for illicit drug use, alcohol use and if using CRAFFT+N, nicotine use.
3. After the client has completed appropriate screening, score the tool.
4. Utilize motivational interviewing techniques obtained through the SBIRT training to talk with client about the results of the screening.
5. If a client scores in any zone beyond low/no risk, or if any drug or alcohol use is detected during pregnancy, utilize motivational interviewing techniques to complete the brief intervention and referral to treatment if needed.
6. Throughout the process, provide patient education on the dangers of alcohol and drug use.

7. Prior to releasing any substance abuse, HIV, or mental health information for referrals, ensure the client has signed the appropriate Release of Information.
8. Provide a referral to alcohol or substance use treatment if needed. This is best completed through a warm hand off to support the client through the process.
9. Follow your agency's policy for Mandatory reporting in situations that require this per Iowa's mandatory reporting law.

Documentation

Complete in MCAH data system:

1. First and last name of service provider & credentials.
2. Add the appropriate survey to the service and complete the fields.
3. In the 'Comments' field, reference the client's chart for full detail/ description/ clinical record of the service provided as needed to complete the documentation. Capture:
    a. Name of the tool including date/ version of tool
    b. Results/scoring
    c. Interpretation of results
    d. The nature and outcome of the brief intervention
    e. Client questions/ concerns
    f. Referral/follow-up
4. In the client's record: Documentation must adhere to requirements in IAC 441-79.3(2).

Billing

- Use Code 99408 for the child (15-30 minutes)
- Use Code 99409 for the child (over 30 minutes)
- For a billable service the following must be provided and documented:
    - The CRAFFT with brief intervention OR
    - The AUDIT and/or DAST with brief intervention
- If providing this service for a child's caregiver (over age 21, bill the service as a caregiver risk assessment – Code 96161 - under the child's Medicaid number.)

DRAFT 4-6-2022

Number: 801
Title: Anticipatory Guidance
Billing Code(s):
Effective Date:
Revision Date:
Date of Last Review:
Authority:

Overview
EPSDT encourages healthcare providers to offer practical and contemporary health information to parents before significant physical, emotional and psychological milestones. This guidance will help parents anticipate impending changes and take action to maximize their child's developmental potential and identify their child's special needs.

Policy
At each screening visit provide anticipatory guidance appropriate for the child's age and stage of development.

Procedure
CAH Contractors should develop criteria for anticipatory guidance based on the service provided, the age of the client, and concerns identified during the visit. These criteria are written and available to all clinical service providers. Anticipatory guidance follows public health principles and utilizes best practices provided by a variety of sources (i.e., AAP, Bright Futures, CDC, Zerotothree.org, etc.).

Anticipatory guidance is an essential component of screening services. Providing age-appropriate anticipatory guidance to parents and youth at each screening visit is designed to:

- Assist the parents and youth in understanding what to expect in terms of the child's development.
- Provide information about the benefits of healthy lifestyles and practices as well as injury and disease prevention.

Anticipatory guidance must be age-appropriate, culturally competent, and geared to the particular child's medical, developmental, dental, and social circumstances.

Anticipatory guidance recommended topics are included in Bright Futures: Guidelines for Health Supervision of Infants, Children, and Adolescents, Fourth Edition. Bright Futures is supported by the U.S. Department of Health and Human Services, Health Resources and Services Administration, Maternal and Child Health Bureau. It is published by the American Academy of Pediatrics.

The DHS Screening Centers Provider Manual contains lists of suggested anticipatory guidance topics and age-related topics recommended for discussion at screenings. These are guidelines only. They do not require the inclusion of topics that are inappropriate for the child nor limit topics that are appropriate for the child. Additional resources:

DRAFT 4-6-2022

- Bright Futures: A joint project of the Maternal and Child Health Bureau and the Academy of Pediatrics, these offer comprehensive health supervision guidelines and tools, including recommendations on immunizations, routine health screenings and anticipatory guidance. Bright Futures also offers free parent handouts and other resources.
- Zero to Three: Materials for parents and providers, including child development handouts for parents that discuss development from the child's perspective.
- Ages and Stages: A series of downloadable brochures on child development based on age from Iowa State University. These brochures are also available in a Spanish version, *Edades*.
- Essentials for Parenting Toddlers and Preschoolers: This CDC website provides information and materials to help parents develop strong, stable and nurturing relationships with their children.

DRAFT 4-6-2022

Number: 802
Title: Anticipatory Guidance 11-21 years
Billing Code(s):
Effective Date:
Revision Date:
Date of Last Review:
Authority:

DRAFT 4-6-2022

Overview

Anticipatory guidance (or preventive counseling) is the advice health care professionals provide clients, parents, and caregivers during a visit that addresses problems that could occur in the future. Age appropriate topics such as nutrition, injury prevention, behavior management, developmental stimulation, sex education, and general health education all may be covered during every visit. Adolescents and young adults in the U.S. are the least likely age group to access preventive health care, so every visit is a vital opportunity for preventive care and anticipatory guidance. Adolescents are interested and very willing to talk with health care providers about selected screening topics and anticipatory guidance, especially when completed within a private, confidential environment (Oregon Pediatric Improvement Partnership, 2015).

Policy

Anticipatory guidance regarding the child's health must be provided as part of every child and adolescent health service. Anticipatory guidance supports health and development and prevents injury and illness as the child grows older. Anticipatory guidance must be age-appropriate, culturally competent, and geared to the particular child's medical, developmental, dental, and social circumstances.

Required Credentials

Anticipatory guidance is provided by a licensed health care provider (MD, DO, ARNP, PA, RN).

Procedure

Strengths-based counseling is focused on the youth's competencies, healthy behaviors, relationships, community engagement, self-confidence, and decision making. Providing anticipatory guidance with a strengths-based approach can promote healthy adolescent choices, independence, and involvement in their own health care, as well as decrease risky behaviors (Duncan, 2012).

The effectiveness of anticipatory guidance can be maximized through motivational interviewing, awareness of and respect for the youth's and family's culture and values, and using plain language.

Providers should also be aware of consent and confidentiality laws for youth. A summary of minor consent statutes in Iowa can be found here.

Anticipatory guidance topics should be individualized and prioritized according to the questions and concerns brought by the youth or parent/guardian, as well as gleaned from the health history, and physical exam. As an additional resource, the Minnesota Title V Child and Teen

Checkup program has developed an Adolescents and Young Adults (AYA) Health Questionnaire to facilitate meaningful 1:1 conversations between providers and adolescents/young adults.

Bright Futures offers significant detail on anticipatory guidance topics for adolescents at: Bright Futures: Performing Preventive Services - Anticipatory Guidance. Anticipatory guidance specifically for late adolescents/young adults, ages 18-24, can be found at the following resource. Other key topics for anticipatory guidance include:

1. **Adolescent Development**:
    a. Sharing the Ten Tasks of Adolescent Development (http://hr.mit.edu) with parents and young people can put the young person's changing needs and behaviors in perspective.
    b. The Bright Futures, 4th ed. provides recommendations for anticipatory guidance by topic and age (Hagan J.F., 2017), including promoting healthy sexual development and sexuality (www.brightfutures.aap.org).
    c. Resources to support adolescent mental health (www.hhs.gov) includes a variety of healthy development topics and resources.
2. **Healthy Relationships**: Relationships are foundational to helping young people discover their strengths and make positive contributions to their communities. Encourage parents to set routines and developmentally appropriate expectations, provide positive reinforcement of desired behaviors, and encourage independence (Glascoe, 2010).
    a. Healthy and safe relationships (www.loveisrespect.org)
    b. Ages and Stages: Teen (www.healthychildren.org)
3. **Healthy Lifestyle**:
    a. Parent Information: Teens (Ages 12-19) (www.cdc.gov)
    b. Nutrition and Fitness: Healthy Active Living for Families (www.healthychildren.org)
    c. Internet safety, social media, and screen time: Family Media Plan (www.healthychildren.org)
    d. Sleep: How much sleep do I need? (www.kidshealth.org)
4. **Injury Prevention**:
    a. Protect the ones you love: Child injuries are preventable (www.cdc.gov)
    b. Safety tips for preteens 10-14 years (www.safekids.org) and teens 15-19 years (www.safekids.org)
    c. Teen Drivers (www.cdc.gov)
    d. Preventing Children's Sports Injuries (www.kidshealth.org)
5. **Illness Prevention:**
    a. Vaccines for Your Children (www.cdc.gov)
    b. Sexually Transmitted Diseases (STDs): Prevention (www.cdc.gov)

Documentation

Reimbursement for anticipatory guidance is a part of the cost and fee of the direct service or enabling service being provided.

DRAFT 4-6-2022

Overview

Anticipatory guidance (or preventive counseling) is the advice health care professionals provide clients, parents, and caregivers during a visit that addresses problems that could occur in the future. Age appropriate topics such as nutrition, injury prevention, behavior management, developmental stimulation, sex education, and general health education all may be covered during every visit. Parents and guardians who receive anticipatory guidance information report more confidence as a caregiver, were more likely to use positive parenting strategies, and were less likely to report feeling worried about the development of their child in the areas that anticipatory guidance was discussed with them (Bethell, Peck, & Schor, 2001).

Policy

Anticipatory guidance regarding the child's health must be provided as part of every well child visit. Anticipatory guidance supports health and development and prevents injury and illness as the child grows older. Anticipatory guidance must be age-appropriate, culturally competent, and geared to the particular child's medical, developmental, dental, and social circumstances.

Required Credentials

Anticipatory guidance should be provided by a licensed health care provider (MD, DO, ARNP, PA, RN).

Procedure

High priority topics of anticipatory guidance should be part of the face-to-face conversation with the client/family. Handouts can supplement this in-person guidance, keeping in mind the family's language and literacy needs. Focus anticipatory guidance topics on:

1. Questions and concerns brought by the child and the parent/caregivers,
2. Findings from the child's health history and physical exam, and
3. Age-appropriate health promotion and illness or injury prevention (refer to helpful links later in this fact sheet).

Motivational interviewing, awareness of and respect for the family's culture, values and using plain language all improve the effectiveness of anticipatory guidance.

Bright Futures offers significant detail on anticipatory guidance topics at: Bright Futures: Performing Preventive Services - Anticipatory Guidance. Additionally, Early Childhood Iowa provides many resources, including some in other languages, which can be found here. Other key topics for anticipatory guidance include:

1. **Healthy Relationships**: Positive relationships are the foundation for healthy social-emotional, physical, and cognitive development. Encourage parents to set routines and developmentally appropriate expectations (Glascoe, 2010).
    a. Early Development and Well Being (www.zerotothree.org)

   b. Search Institutes Developmental Relationship and Developmental Assets Frameworks (www.search-institute.org)
   c. Positive Parenting Tips (www.cdc.gov)
   d. Ages and Stages (www.healthychildren.org)
2. **Healthy Lifestyle:** An active lifestyle and healthy behaviors are important for optimal development and lifelong beneficial habits.
   a. Healthy Living for Families (www.healthychildren.org)
   b. We Can! EatPlayGrow (www.nhlbi.nih.gov)
   c. MyPlate (www.choosemyplate.gov)
   d. Children's Oral Health (www.cdc.gov)
   e. All About Sleep (www.kidshealth.org)
3. **Injury Prevention:** Keeping children safe is a critical role of parenting.
   a. Protect the Ones You Love: Child Injuries are Preventable (www.cdc.gov)
   b. Safe Kids Worldwide Safety Tips (www safekids.org)
   c. Household Safety Checklists (www.kidshealth.org)
   d. Safe to Sleep (www.safetosleep.nichd.nih.gov or Iowa SIDS Foundation)
   e. Preventing Abusive Head Trauma (www.cdc.gov or The Period of Purple Crying website)
   f. Child Passenger Safety (www.cdc.gov)
   g. Preventing Children's Sports Injuries (www.kidshealth.org)
4. **Illness Prevention:** Children have close and prolonged contact with others, especially in settings such as daycare, preschools, and schools, which puts them at higher risk of contracting illness.
   a. Germ Prevention Strategies (www.healthychildren.org)
   b. Vaccines and Immunizations (www.cdc.gov)
   c. When to Call Your Pediatrician (www.healthychildren.org)

Description in Brief
This is face-to-face behavioral counseling for alcohol misuse.

Overview
Counseling interventions in the primary care setting can improve unhealthy alcohol consumption behaviors in clients engaging in risky or hazardous drinking. Behavioral counseling interventions for alcohol misuse vary in their specific components, administration, length, and number of interactions.

Policy
If indicated by the alcohol screening tool provide a brief face-to-face behavioral counseling session for alcohol misuse. Contractors shall have an individual order by a primary care provider, or the client shall meet the criteria of the standing order signed by the medical director for the screening.

DRAFT 4-6-2022

Required Credentials
RN or social worker (BSW or licensed).

Procedure
Accompanying the 'Screen and Intervene' approach is a framework used to promote reducing or quitting addictive behaviors. The five A's framework (ask, advise, assess, assist, and arrange) is adapted for alcohol use below.
Along with 'Screen and Intervene,' health care providers can use these steps to help promote the reduction of alcohol use or quitting for clients.

1. **Ask:** identify and document the risky alcohol use status of every client beginning at age 11 at least yearly. See the Adolescent Tobacco, Alcohol & Drug Use Assessment policy/procedure for more information on screening.
2. **Advise:** In a clear, strong, and personalized manner, advise every risky drinker to reduce alcohol use or quit.
3. **Assess:** For the current risky drinker, assess whether the client is willing to reduce alcohol use or quit at this time.
4. **Assist:** For the client willing to reduce alcohol use or quit, assist them to develop a personalized plan for how and when to do so, provide or refer for counseling or additional behavioral treatment. For clients unwilling to change their drinking at this time, provide interventions designed to increase readiness to change. For the client who recently reduced alcohol use or quit and for the client facing challenges to remaining alcohol free, provide relapse prevention.
5. **Arrange**: For the client willing to reduce alcohol use or quit, arrange for follow-up contacts, beginning within the first week after the change date. For the client unwilling to

reduce alcohol use or quit at this time, address risky drinking and willingness to reduce alcohol use or quit at their next clinic visit.

Some adolescents, such as those with alcohol/drug dependence and co-occurring mental disorders, will require more directive intervention, parental involvement, and referral to intensive treatment.

Become familiar with treatment resources in your community. Adolescent-specific treatment is uncommon in many communities but, if possible, refer adolescents to programs that are limited to adolescents or have staff specifically trained in counseling adolescents.

Documentation

1. Time in and time out are required.
2. Complete in MCAH data system:
    a. Service fields.
    b. First and last name of service provider & credentials.
    c. In the 'Comments' field, reference the client's chart for full detail/ description/ clinical record of the service provided.

DRAFT 4-6-2022

Number: 805
Title: Blood Draws - Venipuncture and Capillary
Billing Code(s): Collection of venous blood by venipuncture - 36415; Collection of capillary blood specimen - 36416
Effective Date: 10/01/2022
Revision Date:
Date of Last Review:
Authority:

Description in Brief

Code 36415 Collection of venous blood by venipuncture;
Code 36416 Collection of capillary blood specimen

Overview

The choice of site and procedure (venous site, finger-prick – also referred to as "capillary sampling") will depend on the volume of blood needed for the procedure and the type of laboratory test to be done. The blood from a capillary specimen is similar to an arterial specimen in oxygen content, and is suitable for only a limited number of tests because of its higher likelihood of contamination with skin flora and smaller total volume.

Policy

Appropriate blood draw type (i.e. venipuncture and finger-prick) will be utilized to obtain necessary samples. Contractors shall have an individual order by a primary care provider, or the client shall meet the criteria of the standing order signed by the medical director for the screening.

Required Credentials

Service is provided by a licensed healthcare provider (MD, DO, ARNP, PA, or RN), a CMA, or phlebotomist.

Procedure

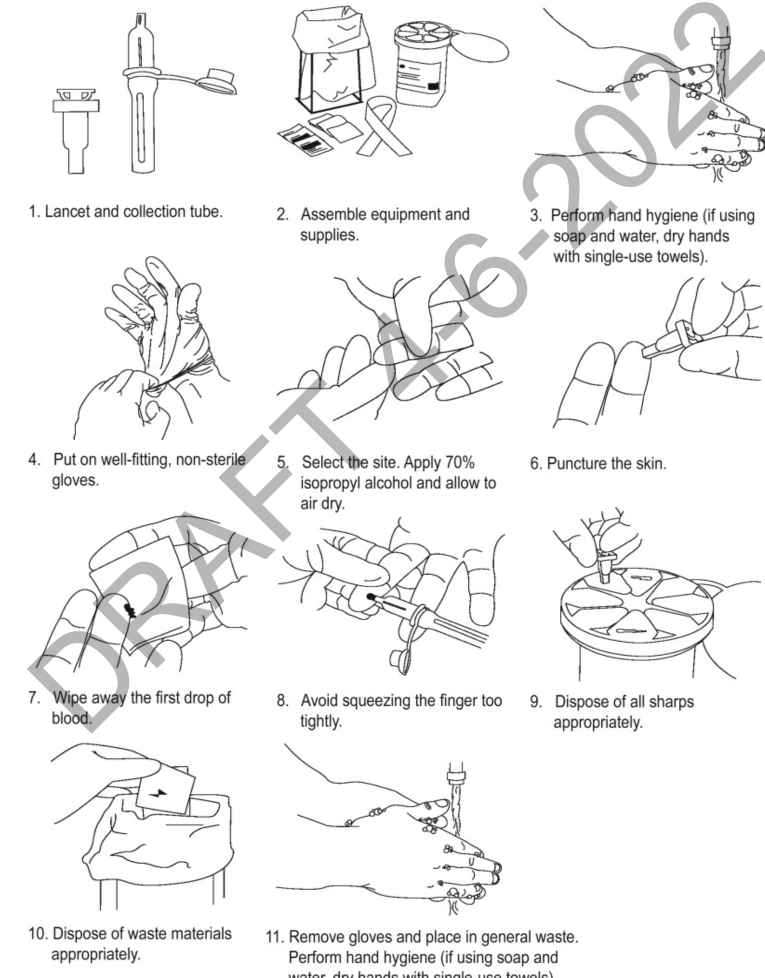
Capillary Draws: Children over 6 months of age and who weigh more than 22 lbs. should have finger-prick versus a heel-stick. Follow the procedure below to obtain a capillary blood sample:

1. **Selection of site and lancet:** In a finger-prick, the blade depth should not go beyond 2.4 mm, so a 2.2 mm lancet is the longest length typically used. The recommended depth for a finger-prick is:
    a. for a child over 6 months and below 8 years – 1.5 mm;
    b. for a child over 8 years – 2.4 mm.
2. **Patient immobilization** is crucial to the safety of the pediatric undergoing phlebotomy, and to the success of the procedure. A helper is essential for properly immobilizing the patient for venipuncture or finger-prick. First immobilize the child by asking the helper to:
    a. sit with the child on the helper's lap;
    b. immobilize the child's lower extremities by positioning their legs around the child's in a cross-leg pattern;
    c. extend an arm across the child's chest, and secure the child's free arm by firmly tucking it under their own;
    d. grasp the child's elbow (i.e. the skin puncture arm), and hold it securely;

DRAFT 4-6-2022

e. use his or her other arm to firmly grasp the child's wrist, holding it palm down.

3. Warm the heel or finger with a warm compress for several minutes before sampling to help dilate the blood vessels.
4. Clean the area with alcohol.
5. Using a sterile lancet, puncture the finger on the ventral lateral surface near the tip (or the heel on the lateral aspect avoiding the posterior area).
    a. Too much compression should be avoided, because this may cause a deeper puncture than is needed to get good flow.
    b. DO NOT use a surgical blade to perform a skin puncture.
    c. DO NOT puncture the skin more than once with the same lancet, or use a single puncture site more than once, because this can lead to bacterial contamination and infection.
6. Wipe away the first drop of blood with a dry gauze, then collect blood with a capillary tube/container. Avoid "milking" capillary stick site, as this increases tissue fluid in the sample and may falsely lower the result.
7. A graphic depiction of the procedure is below:



DRAFT 4-6-2022

Venipuncture

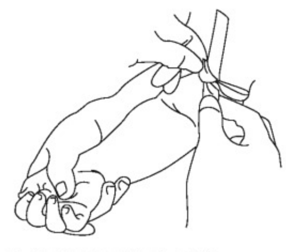
There are times when venous blood draws are appropriate, such as when obtaining a blood sample for a Tuberculosis IGRA test or confirming a blood lead level. The following is a procedure for pediatric venipuncture.

1. **Selection of needle gauge:**

a. Use a winged steel needle, preferably 23 or 23 gauge, with an extension tube (a butterfly):
    i. avoid gauges of 25 or more because these may be associated with an increased risk of hemolysis
    ii. use a butterfly with either a syringe or an evacuated tube with an adaptor; a butterfly can provide easier access and movement, but movement of the attached syringe may make it difficult to draw blood.
b. Use a syringe with a barrel volume of 1–5 ml, depending on collection needs; the vacuum produced by drawing using a larger syringe will often collapse the vein.
c. When using an evacuated tube, choose one that collects a small volume (1 ml or 5 ml) and has a low vacuum; this helps to avoid collapse of the vein and may decrease hemolysis.
d. Where possible, use safety equipment with needle covers or features that minimize blood exposure. Auto-disable (AD) syringes are designed for injection, and are not appropriate for phlebotomy.

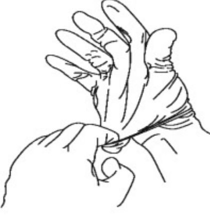
2. **Patient immobilization** is crucial to the safety of the pediatric undergoing phlebotomy, and to the success of the procedure. A helper is essential for properly immobilizing the patient for venipuncture. Immobilize the child as described below.
    a. Designate one staff as the technician, and another staff t or a helper to immobilize the child.
    b. Ask the two adults to stand on opposite sides of an examination table.
    c. Ask the immobilizer to:
        i. stretch an arm across the table and place the child on its back, with its head on top of the outstretched arm;
        ii. pull the child close, as if the person were cradling the child;
        iii. grasp the child's elbow in the outstretched hand;
        iv. use their other arm to reach across the child and grasp its wrist in a palm-up position (reaching across the child anchors the child's shoulder, and thus prevents twisting or rocking movements; also, a firm grasp on the wrist effectively provides the phlebotomist with a “tourniquet”).
3. Warm the arm with a warm compress for several minutes before sampling to help dilate the blood vessels.
4. Apply a tourniquet.
5. Clean the area with alcohol.
6. Puncture the skin 3–5 mm distal to (i.e. away from) the vein; this allows good access without pushing the vein away.
7. If the needle enters alongside the vein rather than into it, withdraw the needle slightly without removing it completely, and angle it into the vessel.
8. Draw blood slowly and steadily.
9. Remove the tourniquet once the necessary volume of blood is withdrawn.
10. Place dry gauze over the venipuncture site and slowly withdraw the needle and apply mild pressure to the wound.
11. Ask the helper to continue applying mild pressure.
12. A graphic depiction of the procedure is below:

DRAFT 4-6-2022

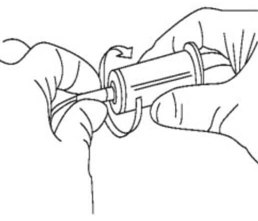


4. Immobilize the baby or child.

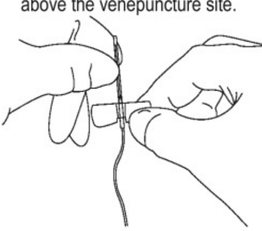
5. Put the tourniquet on the patient about two finger widths above the venepuncture site.



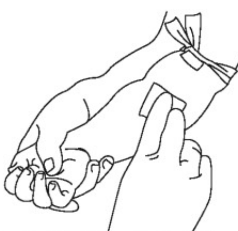
6. Put on well-fitting, non-sterile gloves.



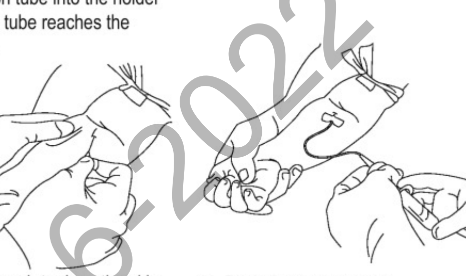
7. Attach the end of the winged infusion set to the end of the vacuum tube and insert the collection tube into the holder until the tube reaches the needle.



8. Remove the plastic sleeve from the end of the butterfly.

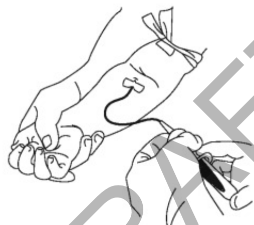


9. Disinfect the collection site and allow to dry.



10. Use a thumb to draw the skin tight, about two finger widths below the venepuncture site.

11. Push the vacuum tube completely onto the needle.

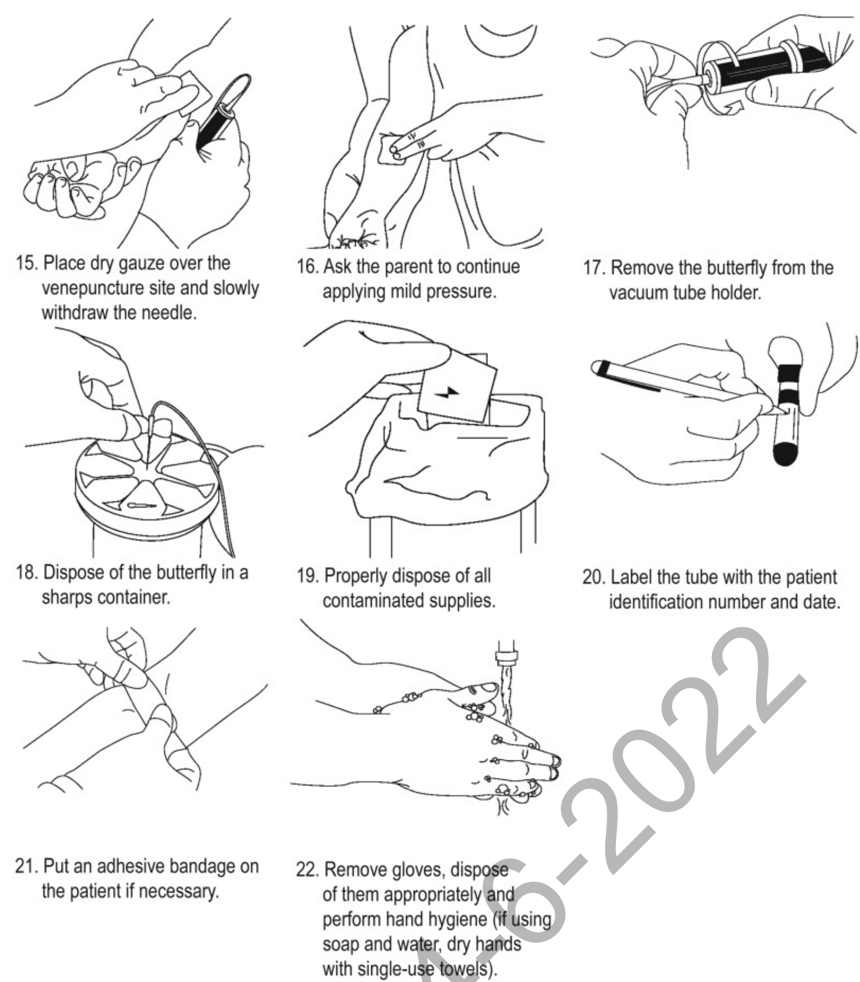


12. Blood should begin to flow into the tube.

13. Fill the tube until it is full or until the vacuum is exhausted; if filling multiple tubes, carefully remove the full tube and replace with another tube, taking care not to move the needle in the vein.

14. After the required amount of blood has been collected, release the tourniquet.

DRAFT 4-6-2022



DRAFT 4-6-2022

Documentation: Documentation must adhere to requirements in IAC 441-79.3(2).

1. Report the total time of the service (duration).
2. Complete in MCAH data system: first and last name of service provider & credentials

Billing

1. Use only one of the following:
   Code 36415 for venous draw.
   Code 36416 for capillary draw.
2. Note that these codes may deny as 'incidental services' if billed in conjunction with other direct care services
3. A blood lead draw and 99000 handling/conveyance cannot both be billed. Only one of the three codes can be billed.

Number: 806
Title: Blood Lead Evaluation and Management
Billing Code(s): 99211
Effective Date:
Revision Date:
Date of Last Review:
Authority:

Description in Brief
Code 99211- Office visit for the evaluation and management of an established patient that may not require the presence of a physician.

Overview
In the Child Health Screening Center, Evaluation and management (E & M) is for a face-to-face encounter with a client to conduct Lead risk assessment (lead questionnaire), education about lead poisoning, and follow-up instructions when doing a blood lead draw.

Policy
MCAH contractors will provide assessment, education, and anticipatory guidance to clients and families regarding blood lead testing and results.

Required Credentials
Service is provided by a licensed health care provider (MD, DO, ARNP, PA, RN).

Procedure
Code 99211 describes a face-to-face encounter with a patient consisting of elements of both evaluation (requiring documentation of a clinically relevant and necessary exchange of information) and management (providing patient care that influences, for example, medical decision making or patient education).

- The evaluation shall include an assessment of the client's blood lead testing history using medical records, search of the MCAH data system, or, as a last resort, parent recall.
  - Contractors may use the Lead Risk Screening Questionnaire to determine if child is high risk and in need of more frequent blood lead testing
- Education shall include nutritional ways to mitigate lead exposure (i.e., foods with calcium, iron and vitamin C) and environmental ways to mitigate exposure (i.e., using wet paper towels to clean up lead dust, clean windows, floors, play areas; wash hands often and before eating/sleeping; and place contact paper or duct tape over peeling paint). CDC Brochure: 5 things you can do to help lower your child's lead level.
- Anticipatory guidance shall include: next testing date, how results will be provided, developmental milestones and tasks that could increase lead poisoning, etc.

Documentation: Documentation must adhere to requirements in IAC 441- 79.3(2).
In the MCAH data system complete the following:

- First and last name of service provider & credentials

DRAFT 4-6-2022

- In the ‘Comments’ field, reference the client's chart for full detail/ description/ clinical record of the service provided. Specify what the E & M is related to (e.g. lead test)
- Report the total time of the service (duration)

Billing:

- Use Code 99211
- This encounter code can only be used once per day per client.
- E & M is a clinical encounter direct care service. This code **cannot** be used for:
    - Providing care coordination services
    - E & M on the same day as a full well child screen
    - Explaining the purpose of a developmental test, interpretation of the test, anticipatory guidance, and needed referral for evaluation when conducting a developmental or social/emotional screening. (These activities are already included in the G0451 and 96127 codes.)
- Do not bill E & M related to immunization administration. Instead use ‘immunization administration with counseling’ (Code 90460/90461).

DRAFT 4-6-2022

Number: 807
Title: Blood Lead Screening, Analysis, and Handling/Conveyance
Billing Code(s): Blood Lead Analysis, CLIA Waived Blood Lead Analysis - Codes 83655, 83655QW; Handling or conveyance of specimen for transfer to a laboratory **-** Code 99000
Effective Date: 10/01/2022
Revision Date:
Date of Last Review:
Authority: Iowa Code § 135.105D, 641 IAC chapters 67, 72

DRAFT 4-6-2022

Description in Brief

Collection of blood sample ***and*** lab analysis of blood lead level using the Lead Care II.

- Code 83655, 83655QW Blood Lead Analysis, CLIA Waived Blood Lead Analysis
- Code 99000 Handling or conveyance of specimen for transfer to a laboratory

Overview

Protecting children from exposure to lead is important to lifelong good health. No safe blood lead level in children has been identified. Even low levels of lead in blood have been shown to affect IQ, ability to pay attention, and academic achievement.

Lead exposure occurs when a child comes in contact with lead by touching, swallowing, or breathing in lead or lead dust. Lead quickly enters the blood and can harm a child's health. Even after removing lead hazards from a child's environment, blood levels do not drop right away, so prevention is key.

The health effects of exposure are more harmful to children less than six years of age because their bodies are still developing and growing rapidly. Young children also tend to put their hands or other objects, which may be contaminated with lead dust, into their mouths, so they are more likely to be exposed to lead than older children. Lead is quickly absorbed into the bloodstream. Once a child ingests lead, their blood lead level rises. Once a child's exposure to lead stops, the amount of lead in the blood decreases gradually. The child's body releases some of the lead through urine, sweat, and feces. Lead is also stored in bones. It can take decades for the amount of lead stored in the bones to decrease. Many things affect how a child's body handles exposure to lead, including:

- Child's age
- Nutritional status
- Source of lead exposure
- Length of time the child was exposed
- Presence of other underlying health conditions

Although lead in blood represents only a portion of the total amount of lead present in the body, a blood lead test is the best available way to assess a person's exposure to lead.

Mandatory Blood Lead Testing in Iowa

In Iowa, legislation requires all children entering kindergarten to have at least one blood lead level test and that results are required to be reported to IDPH, Bureau of Environmental Health Services.

Iowa House File 158 was passed in 2007, amended in 2008 and became effective July 1, 2008. This law is now codified at Iowa Code section 135.105D and is known as “mandatory blood lead testing.” The goal of this legislation is to protect Iowa children under the age of 6 years from lead damage in their developing brains and nervous systems, and to reduce the number of children with developmental and learning problems related to lead exposure.

Information regarding mandatory reporting of lab tests can be found at the IDPH, Childhood Lead Poisoning Prevention Program webpage.

Policy

1. Every child 12 through 35 months enrolled in the CAH program shall be tested for blood lead poisoning if the child has not been tested in the previous 12 months.
2. Contractors shall utilize enabling services to assist the family in obtaining blood lead testing through their medical home. If enabling services fail, contractors shall administer blood lead level testing. Appropriate follow-up based upon the result, including confirmation, if needed, shall be completed.
3. Contractor must report lead test results to the Department in accordance with Department requirements.
4. Contractors shall have an individual order by a primary care provider, or the client shall meet the criteria of the standing order signed by the medical director for the screening.

Required Credentials

Blood lead screening and testing is provided by a licensed health care provider MD, DO, ARNP, PA, RN, LPN, or a CMA.

Procedure

1. Contractors shall assess if a child ages 12-35 months has had a blood lead test in the past year. If not, utilize enabling services to assist the family in accessing blood lead testing through their medical home. If enabling services fail, administer blood lead level testing.
2. Do not assume that all children are at low risk. Lead testing and follow up protocols for case management can be found at this link. For children at higher risk, or suspected of exposure, contractors may administer the IDPH lead questionnaire (English and Spanish), to determine if additional testing is needed at 9 months and 18 months.
3. Once the child’s level of risk has been identified, administer blood lead level testing:
    a. For all children: test at 12 and 24 months.
    b. For children at higher risk: Begin testing at 9 months or at time high risk is determined if older than 9 months with testing at 12, 18 and 24 months, then annually up to age of 6 years. For children with a high blood test result follow the IDPH guidelines for retesting intervals.
4. During a blood lead test, a small amount of blood is taken from the finger or arm and tested for lead. Two types of blood tests may be used. Do not use erythrocyte protoporphyrin (EP) as a screening tool for lead poisoning, because it is not sensitive enough to identify children with blood lead levels below 25 µg/dL.

DRAFT 4-6-2022

a. **A finger-prick, or capillary, test** is usually the first step to determine if a child has elevated blood lead levels. While finger-prick tests can provide fast results, they also can produce higher results if lead on the skin is captured in the sample. For this reason, if a blood lead test result equal to or greater than 10 ug/dl is obtained by capillary specimen (finger prick), it must be confirmed using a venous blood sample.
b. **A venous blood draw** takes blood from the child's vein. This type of test can take a few days to receive results and is often used to confirm elevated blood lead levels seen in the first capillary test.

5. **Action Levels**: Since 2012, the CDC has considered a blood lead level of 5 mcg/ml elevated; the Iowa Department of Public Health's action level is currently set at 10 µg/dL. The lead testing and follow up protocols for case management are located at this link.
   a. 15 µg/dL and above require a venous draw confirmatory test.
   b. Venous blood lead levels of 20 µg/dL or higher result in automatic eligibility for Early ACCESS services for children ages 0-3.
   c. The Lead Care II is the only CLIA waived testing device approved by IDPH. **Child Health agencies using the Lead Care II must report the results of all blood lead testing electronically to the Bureau of Lead Poisoning Prevention.**
   d. If a blood lead test result of 15 µg/dL or higher is obtained from a Lead Care II, a venous sample must be drawn and sent to a reference lab for a confirmatory test.

DRAFT 4-6-2022

Documentation

Documentation must adhere to requirements in IAC 441-79.3(2)

1. Report the total time of the service (duration).
2. Complete in the MCAH data system:
   a. Service fields
   b. First and last name of service provider & credentials
   c. If completing a Childhood Lead Poisoning Questionnaire, add this 'Survey' and complete fields

Billing

1. A blood lead draw and handling/conveyance cannot both be billed. Only one of the three codes can be billed.
2. When using Code 83655, include the QW modifier to indicate a CLIA waived test.
3. Do not bill codes 36415, 36416, or 99000 when using 'blood lead analysis' (Code 83655). The scope of Code 83655 includes the lead draw.

DRAFT 4-6-2022

Number: 808
Title: Blood Pressure
Effective Date: 10/01/2022
Revision Date:
Date of Last Review:
Authority:

IDPH IOWA Department of PUBLIC HEALTH

Overview

Non-invasive blood pressure (BP) measurement is an essential component of pediatric physical assessment. Correct technique for measuring BP is necessary to ensure accuracy of readings, while ensuring minimal discomfort to the client.

Policy

Blood pressure of children should be assessed as part of the well visit starting at 3 years of age. Children less than 3 years of age should have their BP checked under special conditions including a history of prematurity, congenital heart disease malignancy and other systemic illnesses. Contractors shall have an individual order by a primary care provider, or the client shall meet the criteria of the standing order signed by the medical director for the screening.

Required Credentials

CMA, LPN, RN, PA, ARNP, DO, MD

Procedure

1. Gather supplies
2. Squeeze all the air out of the cuff.
3. A screening blood pressure is ideally obtained on the right arm.
4. Cuff size is important. A proper sized cuff covers at least two-thirds of the upper arm.
5. Line up the artery marking (arrow) on the cuff with the front of the elbow. Wrap the cuff around the upper arm, directly on the skin (not over the sleeve). The bottom edge should be about one inch above the elbow crease and allow enough room under the cuff so that two of your fingers can fit.
6. If using a manual blood pressure cuff, place the flat part of the stethoscope over the elbow crease, below the artery markings on the cuff. Hold gently in place.
7. If using a digital or automatic blood pressure cuff, turn on the machine according to directions. The cuff will automatically inflate and then deflate as it reads the blood pressure. Skip to #13.
8. With your other hand tighten the screw on the bulb to close the valve. Squeeze the bulb quickly until the needle on the gauge is 20 to 30 points above where you expect the higher blood pressure number to be.
9. Loosen the screw to release the pressure in the cuff at a slow, even rate (about 2 to 3 mm per second).
10. Watch the gauge as you release the air. As the needle falls, listen and note:

DRAFT 4-6-2022

- ○ **Systolic pressure** (top number) - the point on the gauge where the first clear tapping sounds are heard.
- ○ **Diastolic pressure** (bottom number) - the point at which the sounds stop.

11. When all sounds stop, deflate the cuff rapidly and completely.
12. Chart the blood pressure reading.
13. If reading is outside of the normal ranges in the vital signs summary table below, contact the health care provider and report findings. Click here for a full table of Blood Pressure Levels for Boys and Girls by Age and Height Percentage. Note that the client's normal range and clinical condition should always be considered.

Group (weight in kg)	**Age**	**Height**	**Blood pressure**			
	(years)	**(cm)**	**(mmHg) (50th-90th percentile)**			
			Boys		**Girls**	
			Systolic	Diastolic	Systolic	Diastolic
Infant	1-12 months		72 -104	37-56	72-104	37-56
Toddler	1	**77-87**	86-101	41-54	85-102	42-58
(10-14 Kg)	2	**86-98**	89-104	44-58	89-106	48-62
Preschooler	3	**92-105**	90-105	47-61	90-107	50-65
	4	**98-113**	92-107	50-64	92-108	53-67
(14-18Kg)	5	**104-120**	94-110	53-67	93-110	55-70

Number: 809
Title: Caregiver Depression Screening
Billing Code(s): Depression Screening - 96161
Effective Date: 10-1-2022
Revision Date:
Date of Last Review:
Authority:

Description in Brief
Depression screening using the Patient Health Questionnaire-9 (PHQ-9).

Overview
Due to the long-term consequences of perinatal depression on children, screening for depression is an important part of preventive pediatric care (Berkule, et al., 2014). Children of depressed parents are more likely to perform lower on cognitive, emotional and behavioral assessments (Berkule, et al., 2014). They more commonly have difficulties in social and educational situations and have an increased risk of mental health issues later in life (Ferro & Boyle, 2015). An estimated 10-35 percent of mothers experience depression during the postpartum period (Berkule, et al., 2014).

Policy
Universal caregiver depression screening will be provided at the following infant well-child visits: 0-1 month, 2-month, 4-month, and 6- month visits. Screening may be offered more frequently or at other infant visits as needed up through 12 months of age and annually thereafter.

Required Credentials
Must be provided by an RN or a person with at least a bachelor's degree in social work, counseling, sociology, psychology, family and community service, health or human development, health education, or individual and family studies. The qualifications to administer caregiver depression screening are instrument specific. Refer to the instrument's manual or instructions to determine qualifications.

Procedure
Record the name of the completed screening instrument and that you performed the screening as a "risk assessment" in the child's medical record.

Use one of two approved screening tools:

- Edinburgh Postnatal Depression Scale (EPDS) (www.fresno.ucsf.edu) The Edinburgh Postnatal Depression Scale (EPDS) may be used as the tool for caregiver depression screening for up to one year following the birth of the child.
- Patient Health Questionnaire-9 (PHQ-9) (www.phqscreeners.com)

The PHQ-2 does not have adequate validity studies to show that it is accurate or reliable for screening postpartum depression, particularly for caregivers who have lower income levels.

Medicaid will reimburse for using the Edinburgh Postnatal Depression Scale or the Patient Health Questionnaire 9 (PHQ-9). The PHQ-2 is not a separately reimbursable service.

DRAFT 4-6-2022

Assure that referral resources are available as needed.
Assure that staff providing the service have been appropriately trained.

Documentation

- For code 96161, report the total time of the service (duration).
- Complete in MCAH data system:
    - First and last name of service provider & credentials.
    - Add a 'Survey' with scores when providing a PHQ-9 or EPDS.
    - In the 'Comments' field, reference the client's chart for full detail/ description/ clinical record of the service provided as needed to complete the documentation. Capture:
        a. Who the depression screening is for – caregiver
        b. Name of the screening tool including date/ version of tool
        c. Results/scoring
        d. Interpretation of results
        e. Client questions/ concerns
        f. Referral/follow-up

Billing (IME/Medicaid MCO):

- Use Code 96161 for caregiver of a child health client. Bill under the child's Medicaid number. Code 96161 is an encounter code and is not billed based upon time.

DRAFT 4-6-2022

Number: 810
Title: Preventive Medicine Counseling for Chlamydia or Gonorrhea
Billing Code(s): 99401 (15 minute unit) and 99402 (30 minute unit)
Effective Date: 10-1-2022
Revision Date:
Date of Last Review:
Authority:

Description in Brief
Preventive medicine counseling: Counseling, risk factor reduction, and behavioral change intervention services related to testing for chlamydia and/or gonorrhea.

Overview
All sexually active adolescents are at risk for STIs and should receive behavioral counseling interventions. Other types of CAH visits that may warrant preventive medicine counseling include a client presenting for pregnancy testing or is currently pregnant, discloses they are in an unsafe relationship or has a coercive partner, discloses drug or alcohol use, or discloses depression or other mental health concerns.

Policy
At the initial visit and annually thereafter, adolescents should be asked about sexual activity, either current sexual activity or intention to become sexually active, and provided counseling based on risk.

Procedure
1. If sexually active or considering becoming sexually active, client must be counseled about STIs and be given information needed to reduce their risk of acquiring or transmitting of STIs and HIV.
2. Clients should be made aware that whenever they have unprotected sexual intercourse (no barrier method is used), they are exposed to any STIs their partner either has, and also to any diseases that the partner’s former or current partners have.
3. Clients need to be made aware of common STIs, their symptoms and complications, and the importance of diagnosis and treatment. Clients will be informed about where to go for testing, treatment and follow-up if services are not provided on-site.

DRAFT 4-6-2022

Counseling and Education should address the following areas:
1. Individual dialogue about personal risks and risk reduction
2. At-risk behavior, risk reduction and further evaluation
3. Abstinence is the most effective method to avoid STIs and HIV
4. Barrier methods can significantly reduce, but not eliminate STIs
5. Oral sex can also result in STIs
6. HIV education, risks and referral

For information on screening for STIs, see policy 810A STI Screening.

Required Credentials
Must be provided by a RN

Documentation
In the MCAH data system: Documentation must adhere to requirements in IAC 441- 79.3(2).

1. Document under 'Type – Service – Health Services'.
2. Under 'Type of Service', select the correct service code and description.
3. Time in and time out are required for this service.
4. Complete in the MCAH data system:
    a. Service fields.
    b. First and last name of service provider & credentials.
    c. In the 'Comments' field, reference the client's chart for full detail/ description/ clinical record of the service provided. Specify what the preventive medicine counseling is related to (i.e. chlamydia and/or gonorrhea screening).

Billing

1. This service is provided at an encounter separate from a preventive exam by a practitioner.
2. Codes 99401 and 99402 will not pay if another counseling type code is billed for the client on the same day
3. Code 99000 may be used for handling and conveyance of the chlamydia and/or gonorrhea specimens to a lab for analysis.
4. Bill the IME for Medicaid fee-for-service (non-MCO) clients. This includes clients on presumptive eligibility.
5. Bill the MCO for MCO enrolled Medicaid clients. Use Code 99401 (15- minute unit). Use Code 99402 (30- minute unit).
    a. For determining a 15- minute unit: 8-22 minutes = 1 unit
    b. For determining a 30- minute unit: 16-45 minutes = 1 unit.

DRAFT 4-6-2022

Number: 811
Title: CLIA Compliance
Billing Code(s):
Effective Date: 10-1-2022
Revision Date:
Date of Last Review:
Authority:

Overview
The Clinical Laboratory Improvement Amendments of 1988 (CLIA) regulations include federal standards applicable to all U.S. facilities or sites that test human specimens for health assessment or to diagnose, prevent, or treat disease. Exceptions to the CLIA regulations exist for certain testing. For more information, please refer to CLIA at 42 CFR 493.3**.**

Policy
Any contract agency conducting laboratory testing in the provision of services through a contract with IDPH must be certified and in compliance with the Clinical Laboratory Improvement Amendments (CLIA) as required by the Centers for Medicare and Medicaid Services.

Procedure
Local MCAH Contractors must assure that any laboratory they submit samples to is CLIA accredited. However, there are CLIA waivers available for a variety of tests frequently provided in the clinic setting. Visit the CMS CLIA website for a full list of eligible tests.

For additional information and application for CLIA certification or waiver, see the CLIA website at the State Hygienic Laboratory website or call 319-335-4500.

DRAFT 4-6-2022

Number: 812
Title: Clinical Supervision Requirements
Billing Code(s):
Effective Date: 10-1-2022
Revision Date:
Date of Last Review:
Authority: Iowa Code chapters 148, 148C, and 152

IDPH
IOWA Department of PUBLIC HEALTH

Overview

Health care workers (i.e., PA, RN, LPN, and CMA) who provide direct patient care are required to do so under the direction of a physician or ARNP in accordance with Iowa law. Additionally, physicians and ARNP supervising MCAH health care workers must have maternal health and/or pediatric training or experience in the applicable MCAH program.

Policy

Contractors and subcontractors providing direct care services must do so under the direction of a physician (MD or DO) or Advanced Registered Nurse Practitioner (ARNP) in compliance with Iowa scope of practice laws. Additionally, physicians or ARNPs providing clinical supervision must have maternal health and/or pediatric training or experience in the applicable Maternal and/or Child & Adolescent Health (MCAH) program.

Required Credentials

MD, DO, ARNP, PA, RN, LPN, CMA

Procedure

Physicians or ARNPs providing clinical supervision must do so in compliance with the Iowa scope of practice requirements, or in the case of CMAs the American Association of Medical Assistants (AAMA) for the health care workers they are supervising in accordance with the most current requirements found below:

- Physician Assistant (PA)
- Registered Nurse (RN)
- Licensed Practical Nurse (LPN)
- Certified Medical Assistant (CMA)

DRAFT 4-6-2022

Documentation

IDPH requires documentation of the full name, credentials, and state licensing information for each clinical supervisor as described in the policy above.

Title: Comprehensive Health Screening (Well-Child Exam)
Billing Code:
Initial screen - Code 99381: 0-12 mo, Code 99382: 1-4 yr, Code 99383: 5-11 yr, Code 99384: 12-17 yr, Code 99385: 18-21 yr;
Periodic screen - Code 99391: 0-12 mo, Code 99392: 1-4 yr, Code 99393: 5-11 yr, Code 99394: 12-17 yr, Code 99395: 18-21 yr.
Effective Date: 10/01/2022
Revision Date:
Date of Last Review:
Authority:

Description in Brief
The initial or periodic well child exam per Iowa's EPSDT Care for Kids Periodicity Schedule and as described in the Medicaid Screening Center Manual.

Required Resources for Implementation
Contractor must maintain appropriate equipment and tools to complete a comprehensive exam. Contractor must meet the definition of a medical home to conduct comprehensive health screenings.

Overview
A comprehensive health screening, also called a well-child exam, is an age-based point-in-time screening for children enrolled in the Title V CAH program. A comprehensive health screening contains a comprehensive medical history, physical exam, health screening, and developmental screening/history. It includes an assessment of both physical and mental health development.

Iowa's EPSDT Care for Kids Periodicity Schedule provides a minimum basis for follow-up examinations at critical points in a child's life. Interperiodic screening, diagnosis, and treatment allow the flexibility necessary to strengthen the preventative nature of the program. Interperiodic screens may be obtained as required by foster care, educational standards, or when requested for a child.

These recommendations for preventive health care of children and youth represent a guide for the care of well children who receive competent parenting, who have not manifested any important health problems, and who are growing and developing satisfactorily. Other circumstances may indicate the need for additional visits or procedures. If children or youth come under care for the first time at any point on the schedule, or if any of the items are not accomplished at the suggested age, the schedule should be brought up to date at the earliest time.

Policy
Contractors serving as the client's medical home must complete or update a comprehensive health screening in accordance with Iowa's EPSDT Care for Kids Periodicity Schedule.

Required Credentials
The exam is provided by an ARNP, PA, MD, or DO, portions of the exam may be delegated to

DRAFT 4-6-2022

trained staff.

Procedure

- **History:** The medical history can be taken from the child, if age-appropriate, or from a parent, guardian, or responsible adult. The history shall include the following:
    - Identification of specific concerns
    - Family history of illnesses
    - The member's history of illnesses, diseases, allergies, and accidents
    - Information about the member's social or physical environment that may affect the member's overall health
    - Information on current medications or adverse reaction or responses due to medications
    - Immunization history
    - Developmental history to determine whether development falls within a normal range of achievement according to age group and cultural background
    - Identification of health resources currently used
- **Mental Health Assessment:** A mental health assessment using an approved, standardized instrument is recommended for all visits age 6 through 11 years, and is required for ages 12 through 20 years. This includes obtaining the child and family's mental health history and the child's history of exposure to trauma.
- **Developmental Surveillance**: Developmental surveillance is required for every health maintenance visit and is not separately reimbursable. Developmental surveillance consists of reviewing family and child strengths and risk factors, eliciting caregiver concerns, reviewing developmental milestones, observation of the child, monitoring and anticipatory guidance. Any child who is identified as having a developmental concern should undergo developmental screening using a standardized screening tool. If potential developmental concern is noted, the child should be referred immediately for more in-depth diagnostic evaluation. (See Developmental Surveillance Policy)
- **Psychosocial/Behavioral Assessment:** See Emotional Behavioral Assessment.
- **Exam**: Comprehensive histories should be taken at initial and interval well visits. An unclothed/undressed and draped physical exam is required at each well visit, and should include an assessment of:
    - Growth:
        - Use the WHO growth charts to monitor growth for infants and children ages 0 to 2 years of age in the U.S.
            - For infants birth to 36 months assess:
                - Length-for-age and Weight-for-age
                - Head circumference-for-age and Weight-for-length
            - For children 2 to 5 years of age assess:
                - Weight-for-stature
        - Use the CDC growth charts to monitor growth for children age 2 years and older in the U.S.
            - For children and adolescents, 2 to 20 years assess:
                - Stature-for-age and Weight-for-age
                - BMI-for-age
    - All organ systems (see - list the policies that accompany this: Hearing, Vision, etc.)

DRAFT 4-6-2022

- Blood pressure should be checked annually beginning at 3 years of age. Infants and children with risk factors should have blood pressure checked before 3 years. (See Policy/Procedure on Blood Pressure).

- **Health Education & Anticipatory Guidance:** (See Health Education & Anticipatory Guidance Policy, Anticipatory Guidance: Birth - 10 years or Anticipatory Guidance 11-20 years)
- **Assessment of Immunization status:** Evaluate child vaccination history and provide recommended vaccinations based on the child's age and vaccination status following the CDC and ACIP recommended vaccines.
- **Oral Health Screening & Risk Assessment**
- **Nutrition/Obesity Prevention**

Documentation

- Document the total time of the service (duration).
- Document any care coordination activity in conjunction with direct care as part of the documentation for the direct care service.
- Complete in MCAH data system.
    - First and last name of service provider & credentials
    - In the 'Comments' field, reference the client's chart for full detail/ description/ clinical record of service provided.

Billing

Use the following well child exam codes:

- Initial screen:
  Code 99381: 0-12 mo.
  Code 99382: 1-4 yr.
  Code 99383: 5-11 yr.
  Code 99384: 12-17 yr.
  Code 99385: 18-21 yr.
- Periodic screen:
  Code 99391: 0-12 mo.
  Code 99392: 1-4 yr.
  Code 99393: 5-11 yr.
  Code 99394: 12-17 yr.
  Code 99395: 18-21 yr.

Objective visual screens (99173/99174) and objective hearing screens (92551/92555) may be billed separately from the well child exam code if provided on the same day. (See Hearing and Vision policies)

Use modifier U1 for a screen that results in a referral for treatment.

DRAFT 4-6-2022

Number: 815
Title: Depression Screening
Billing Code: Annual depression screening for children/adolescents - G0444
Effective Date: 10/01/2022
Revision Date:
Date of Last Review:
Authority:

Description in Brief
This is annual depression screening using the Patient Health Questionnaire-9 (PHQ-9)*. Code G0444.

*The Edinburgh Postnatal Depression Scale (EPDS) may be used for an adolescent for up to one year following pregnancy or giving birth.

Overview
Major depression in children and adolescents is a relatively common disorder. Depression in prepubertal children occurs equally in males and females. Adolescents are different, with depressive disorders after puberty occurring in twice as many females as males.
Depression is related to serious morbidity and mortality. Depressed children and adolescents frequently have comorbid mental disorders, such as
- Anxiety disorders
- Attention-deficit/hyperactivity disorder
- Disruptive disorders, including conduct disorder and oppositional defiant disorder (see the “Disruptive Behavior Disorders” chapter for more information on these disorders)
- Eating disorders

Depressed adolescents are at higher risk of alcohol and substance abuse. Generally depression precedes the onset of alcohol and substance abuse by 4 to 5 years, so identification of depression may provide an opportunity for prevention. Depressed adolescents also experience significant impairment in school functioning and in interpersonal relationships.
Adolescents who are depressed also are at increased risk of suicide ideation, suicide attempts, and completed suicides. Suicide is the third leading cause of death in youth aged 15 to 19. Suicide is the fourth leading cause of death in youth aged 10 to 14. In this age group, 5 times as many males as females completed a suicide attempt.

DRAFT 4-6-2022

Policy
Contractors shall screen children and adolescents for depression beginning at 12 years of age using a standardized assessment tool. Contractors shall have an individual order by a primary care provider, or the client shall meet the criteria of the standing order signed by the medical director for the screening.

Required Credentials
RN or a person with at least a bachelor’s degree in social work, counseling, sociology, psychology, family and community service, health or human development, health education, or individual and family studies. Contractors shall assure that staff providing the service have been appropriately trained in the tool, counseling/anticipatory guidance, referral network, community resources and agency policy.

Procedure Contractors shall:

- Screen for depression using the Patient Health Questionnaire-2 (PHQ-2). If screening is positive on the PHQ-2, the PHQ-9 should be administered. Medicaid will reimburse for the PHQ-9 or other standardized tool. The PHQ-2 is not a separately reimbursable service.
- Interview all adolescents who have a positive PHQ-9 screen for depression. Assess them for depressive symptoms and functional impairment based on the Diagnostic and Statistical Manual of Mental Disorders (DSM-IV-TR) criteria for major depressive disorder, dysthymia, and depression not otherwise specified. Assess for comorbid conditions, both medical and psychiatric.
  - Perform a safety assessment for suicide risk.
  - Does the adolescent now have suicidal thoughts or plans?
  - Have prior attempts occurred?
  - Does the plan or previous attempt have significant lethality or efforts to avoid detection?
  - Has the adolescent been exposed to suicide attempt/ completion by peers or family members?
  - Does the adolescent have alcohol or substance abuse problems?
  - Does the adolescent have a conduct disorder or patterns of aggressive/impulsive behavior?
  - Does the family show significant family psychopathology, violence, substance abuse, or disruption?
  - Does the adolescent have the means available (especially firearms and toxic medications)?
- If PHQ-9 is positive, discuss referral to mental health resource. Make an immediate referral to a mental health provider or emergency services if severe depression, psychotic, or suicidal ideation/risk is evident.
- Document HEADSS/HE2 ADS3 assessment, scores of depression screening tools, referrals discussed or made, and follow-up plans.
- Assure that referral resources are available as needed.
- Assure that staff providing the service have been appropriately trained.

DRAFT 4-6-2022

Documentation

- Time in and time out are required for Code G0444.
- For code 96161, report the total time of the service (duration).

Complete in the MCAH data system:

- First and last name of service provider & credentials.
- Add a “survey” with scores when providing a PHQ-9 or EPDS.
- In the ‘Comments’ field, reference the client's chart for full detail/ description/ clinical record of the service provided as needed to complete the documentation. Capture:
  - Who the depression screening is for – caregiver or adolescent
  - Name of the screening tool including date/ version of tool
  - Results/scoring
  - Interpretation of results
  - Client questions/ concerns

- Referral/follow-up

Billing

Use Code G0444 for annual depression screening for children/adolescents (15- minute unit)

Title: Developmental & Behavioral Health Surveillance & Screenings
Billing Codes: G0451, 96127
Effective Date: 10/01/2022
Revision Date:
Date of Last Review:
Authority

Overview
Based on Iowa EPSDT Care for Kids Three Levels of Developmental Care, contractors will engage in multiple types of Developmental & Behavioral Health Surveillance and Screening, depending on whether they serve as a Medical Home or as a Child Health Screening Center or both.

1. **Developmental surveillance** is completed by Contractors serving as a Medical Home. Surveillance is different from developmental screening. Developmental surveillance is a flexible, continuous process in which knowledgeable professionals perform skilled observations of children during the provision of health care. Developmental surveillance is required for every well-child visit and consists of reviewing family and child strengths and risk factors, eliciting caregiver concerns, reviewing developmental milestones, observation of the child, monitoring and anticipatory guidance.
2. **Developmental Screening** (G0451): is completed by Contractors serving as a Child Health Screening Center. It is a "brief assessment procedure designed to identify children who should receive more intensive diagnosis or assessment." The primary purpose of developmental screening is to identify children who may need more comprehensive evaluation. Developmental screening is a regular part of the well-child visits for all children. It assesses whether a child is developing in appropriate areas: speech/language; fine/gross motor skills; and cognitive skills. (Iowa DHS/Iowa Medicaid Screening Manual). Most commonly done in the primary care physicians' office or another provider who might be caring for the child (e.g., early childhood settings or ECS)? The tools used for screening in most Iowa health systems offering primary care well-child visits are ASQ-3 and Survey of Well-being of Young Children (SWYC). This could also include the Modified Checklist for Autism in Toddlers (MCHAT).
3. **Emotional/behavioral Assessment** (96127): is completed by Contractors serving as a Child Health Screening Center. It includes scoring and documentation using a standardized instrument (e.g. depression inventory, attention-deficit /hyperactivity disorder (ADHD) scale. The assessment serves as a mechanism to identify social emotional or behavioral concerns. The tool used for screening most commonly is the ASQ-SE.

Developmental screens may be completed in compliance with the Iowa EPSDT Periodicity Schedule when the child has not received a developmental screening at the medical home, child care, home visiting program, etc. The results are then reported to the medical home and documented appropriately in the child's medical record and in the MCAH data system.

Policy
Contractors will address EPSDT Periodicity Schedule recommendations for Developmental & Behavioral Health Surveillance and Screening as a gap-filling service when a child is not

DRAFT 4-6-2022

receiving these services within the medical home. EPSDT Periodicity recommendations call for developmental surveillance to be conducted at every well-child visit within their Primary Care Provider office. The recommendations state that any child who is identified as having a developmental concern should undergo developmental screening using a standardized screening tool. If potential developmental concern is noted, the child is referred immediately for more in-depth diagnostic evaluation. Contractors shall have an individual order by a primary care provider, or the client shall meet the criteria of the standing order signed by the medical director for the screening.

Providers
Review the tool-specific requirements as they may differ. Only Medical Homes will complete surveillance. Child Health Screening Centers may complete standardized developmental screening or social/emotional screening.

Required Resources for Implementation
Standardized screening tool and the tool-specific training requirements.

Documentation
Capture in documentation: Name /copy of tool used (fully completed) with service provider signature, credentials, and date. Narrative report on the results and interpretation of results, referrals/action taken/next steps, and family feedback/questions/concerns.

DRAFT 4-6-2022

Procedure
Contractors shall:

- Establish a policy on when client/family needs will be assessed to determine whether the child is encountering a gap in service. Common opportunities for needs/gaps assessment include during informing, during a clinical or direct-service, during care coordination, etc.
- **Assess Need for Gap-Filling Service:** If the Contractor is not serving as the Medical Home, discuss the child's medical home status, early childhood education and care enrollment, home visiting program enrollment, etc. with the parent or legally authorized representative to determine whether the child is receiving surveillance and screening within the medical home or has received a recent standardized developmental screen in a different setting.
- Utilize enabling services to assist the family in establishing a medical home, making an appointment for a well visit, etc. to remove barriers to accessing a developmental screen.

Developmental Surveillance (Medical Homes only):

- Review family and child strengths and risk factors, ask about caregiver concerns, review developmental milestones, observe the child, provide monitoring and anticipatory guidance using age-appropriate developmental checklists to record milestones during preventative care visits as part of developmental surveillance.
  - The Bright Futures Pediatric Intake Form assesses for family risk factors as does the social history component of the Iowa Child Health and Development Record (CHDR). CHDR includes developmental surveillance questions on age-specific forms for children from birth through age 20.

- The adolescent population presents a different developmental challenge. Many of the more readily apparent developmental problems should already have been identified and be under treatment. Focus developmental screening on such areas of special concern such as learning disabilities, peer relations, psychological or psychiatric problems, and vocational skills. For further information on developmental screening, see:
  - Care for Kids Provider Website
  - Medicaid Screening Center Manual
  - Developmental Behavioral Online website of the American Academy of Pediatrics
  - Assuring Better Child Development and Health (ABCD) Electronic Resource Center of the National Academy for State Health Policy
  - National Center of Home Initiatives for Children with Special Needs website of the American Academy of Pediatrics
- Any child presenting at an appropriate recommended screening time per the EPSDT periodicity schedule and does not have a diagnosis should undergo developmental screening using a standardized screening tool. If potential developmental concern is noted, the child should be referred to the appropriate medical specialty immediately for more in-depth diagnostic evaluation.
- **Family Risk Factor Surveillance:**
  - Assess family risk factors using the Bright Futures Pediatric Intake Form or the social history component of the Iowa Child Health and Development Record (CHDR).
  - CHDR includes developmental surveillance questions on age-specific forms for children from birth through age 20.

DRAFT 4-6-2022

Developmental Screening (HCPCS code name: developmental testing G045):

- If the contractor is a medical home, conduct developmental screening as part of a well-child exam at 9, 18 months and 24-30 months. ASQ-3 is the suggested tool. If not a medical home, this may be provided as a gap-filling service if the child does not have a medical home, developmental screening has not already been conducted, and enabling services are unsuccessful.
- Developmental screening personnel qualifications are instrument-specific; refer to each instrument's instruction manual for more information. For the ASQ-3, staff must be trained by a trained trainer. Brookes Publishing offers train-the trainer sessions approximately four times per year https://brookespublishing.com/seminar/asq-3-asqse-2-training-trainers-tot/.
  - Medicaid will reimburse for a standardized screening tool (billing code 96110).
  - Developmental screening documentation must include the name of the screening instrument(s) used, the score(s), and the anticipatory guidance provided to the parent or caregiver related to the screening results.
  - If the screening results are atypical, documentation must include the plan of care and, when appropriate, a referral to the medical home or a medical specialist, local community service agency, and/or other resources as appropriate.

- **Social-emotional:**

- If the contractor is a medical home, screen beginning at 6 months of age, continuing every 6 months through 2 years of age, then yearly. The ASQ:SE2 is the suggested tool. If not a medical home, this may be provided as a gap-filling service if enabling services are unsuccessful.
- The emotional/behavioral assessment includes the scoring and documentation (narrative description) of the service.
- In MCAH data system:
  - Document under 'Type – Service – Health Services'.
  - Under 'Type of Service', select the correct service code and description.
  - Report the total time of the service (duration).
  - Complete the following:
    - Service fields.
    - First and last name of service provider & credentials.
    - Add (ASQ:SE-2) appropriate for the child's age, and complete the score.
    - In the 'Comments' field, reference the client's chart for full detail/ description/ clinical record of the service provided as needed to complete the documentation.
  - Capture in documentation:
    - Name /copy of tool used (fully completed) w/service provider signature, credentials, and date
    - Narrative report on the results and interpretation of results
    - Referrals /action taken/next steps
    - Family feedback /questions/ concerns
    - Documentation must adhere to requirements in IAC 441-79.3(2).
- **Cautions**: Do not use Evaluation & Management (E&M) (See Policy Evaluation and Management) for the following activities, as these are included in the scope of the emotional/behavioral assessment:
  - Explaining the purpose of an emotional/behavioral assessment
  - Scoring and reporting of results
  - Anticipatory guidance and
  - If indicated, referral for further evaluation
- **Billing to IME or Medicaid MCO**
  - Bill the IME for Medicaid fee-for-service (non-MCO) clients. This includes clients on presumptive eligibility.
  - Bill the MCO for MCO enrolled Medicaid clients. Use Code 96127.

- **Autism Screening:**
  - If the contractor is a medical home, conduct autism screening as part of the well visit at 18 and 24 months. M-CHAT R/F is the suggested screening tool. If not a medical home, this may be provided as a gap-filling service if enabling services are unsuccessful.
  - Medicaid will reimburse for a standardized screening tool (billing code 96110).
  - Any child suspected of autism spectrum disorder should be referred immediately for services, diagnostic evaluation, and receive an audiological evaluation.

Referral and Management: Refer the child for evaluation *as soon as concerns are*

DRAFT 4-6-2022

identified. Review the screening results with the child's parent or caregiver and discuss the types of services available from the AEA (educational) and the medical home (medical). Explain the referral process and ensure prompt referral, with follow up to ensure evaluation and treatment are in-process.

- **Medical Evaluation** – A comprehensive medical evaluation determines whether a medical diagnosis is appropriate, the cause and extent of any delay, and treatment options. A medical diagnosis is required for some supportive services and insurance coverage.
- **Developmental Evaluation** (birth to age three)- A comprehensive developmental evaluation by a qualified early childhood professional for children birth to 3 years old can identify the extent of delay and determine if a child is eligible for early intervention. If eligible, early intervention services are provided to the child and family. Refer the child to the Iowa Family Support Network of their local Area Education Agency to get them connected to early intervention.
- **Educational Evaluation** (ages three to five) - A comprehensive educational evaluation by a qualified early childhood education professional for children 3 to 5 years old can identify the extent of delay and determine learning supports available to the family. Refer the child for early childhood education either directly to the Iowa Family Support Network or Area Education Agency.
- **Mental Health Evaluation** - A qualified early childhood mental health professional can support families and young children with social-emotional concerns, and provide comprehensive evaluation for ASD, trauma, and more.

Results: Provide the results of all screens to the child's medical home, and encourage the family to share the results with other care providers (family members, early care and education providers, etc.).

Follow Up: Establish a process for follow up with the family after referral to ensure access to appropriate and effective services. Communicate and coordinate with educational and other professionals, with the parent's permission.

Description in Brief: Developmental screen with interpretation and report. This serves to identify children who may need more comprehensive evaluation. Use recognized instruments such as Ages and Stages Questionnaire (ASQ), Parent's Evaluation of Developmental Status (PEDS), or The Modified Checklist for Autism in Toddlers (M-CHAT).

Documentation: Documentation must adhere to requirements in IAC 441-79.3(2).
In MCAH data system:

- Document under 'Type – Service – Health Services'.
- Under 'Type of Service', select the correct service code and description.
- Report the total time of the service (duration).
- Complete in MCAH data system:
    - Service fields.
    - First and last name of service provider & credentials.
    - Add (ASQ-3 or M-CHAT) appropriate for the child's age, and complete the scores.

DRAFT 4-6-2022

    - In the ‘Comments’ field, reference the client's chart for full detail/description/ clinical record of the service provided as needed to complete the documentation.

Capture in documentation:

- Name /copy of tool used (fully completed) w/service provider signature, credentials, and date
- Narrative report on the results and interpretation of results
- Referrals /action taken/next steps
- Family feedback /questions/ concerns

Billing (IME/Medicaid MCO): Bill the IME for Medicaid fee-for-service (non-MCO) clients. This includes clients on presumptive eligibility. Bill the MCO for MCO enrolled Medicaid clients. Use Code G0451. Do not use E & M for the following activities, as these are included in the scope of the developmental screen service:

- Explaining the purpose of a developmental test
- Scoring and interpretation of results of the test
- Anticipatory guidance and
- If indicated, referral for evaluation.

Adjusting age for prematurity is necessary if a child was born more than 3 weeks before his or her due date and is chronologically under 2 years of age. There is an online calculator at the following link. http://agesandstages.com/age-calculator/

Service: Emotional/behavioral assessment (96127)

Description in Brief: This is an emotional/behavioral assessment that includes the scoring and documentation (narrative description) of the service. The Ages & Stages Questionnaire: Social-Emotional (ASQ:SE) is approved for use.

Documentation: Documentation must adhere to requirements in IAC 441-79.3(2).
In MCAH data system:

- Document under ‘Type – Service – Health Services’.
- Under ‘Type of Service’, select the correct service code and description.
- Report the total time of the service (duration).
- Complete in MCAH data system:
    - Service fields.
    - First and last name of service provider & credentials.
    - Add (ASQ:SE-2) appropriate for the child’s age, complete the score.
    - In the ‘Comments’ field, reference the client's chart for full detail/ description/ clinical record of the service provided as needed to complete the documentation.
- Capture in documentation:
    - Name /copy of tool used (fully completed) w/service provider signature, credentials, and date
    - Narrative report on the results and interpretation of results
    - Referrals /action taken/next steps
    - Family feedback /questions/ concerns

Billing (IME/Medicaid MCO): Bill the IME for Medicaid fee-for-service (non-MCO) clients. This

DRAFT 4-6-2022

includes clients on presumptive eligibility. Bill the MCO for MCO enrolled Medicaid clients. Use Code 96127. Do not use E & M for the following activities, as these are included in the scope of the emotional/behavioral assessment:

- Explaining the purpose of an emotional/behavioral assessment
- Scoring and reporting of results
- Anticipatory guidance and
- If indicated, referral for further evaluation.

DRAFT 4-6-2022

Number: 817
Title: Documentation of Services in MCAH Data System
Effective Date: 10-1-2022
Revision Date:
Date of Last Review:
Authority:

Policy
All services provided under the CAH program must be documented. All services provided under the CAH program must be documented in the IDPH MCAH data system in compliance with IDPH requirements.

Procedure
All services provided under the CAH program must be entered into the IDPH MCAH data system. This web-based record system allows for collection of the child's demographic information, identification of needs, and documentation services. The IDPH CAH, and OH Data System User Manuals can be found in the "library documents" section of the data system. The MH Data System User Manual can be found on the MCAH Portal.

Documentation must comply with generally accepted principles for maintaining health records and with requirements established by DHS in 441 IAC 441 79.3.
Contractors are responsible for the accuracy and compliance of their records, including those of all subcontractors and must document Informing, Care Coordination & Presumptive Eligibility entirely in the MCAH data system.
Contractors must comply with IDPH contract requirements for timely data entry. Documentation of services must be made at the time of service and be available to IDPH by the 15th of the following month. End of state or federal fiscal year may shorten the timeframe for documentation to be available for payment.

DRAFT 4-6-2022

Number: 818
Title: Evaluation and Management
Billing Code(s): 99211
Effective Date: 10-01-2022
Revision Date:
Date of Last Review:
Authority:

Description in Brief
99211 Evaluation and management (E&M) for an office visit with an established client. E & M is a clinical encounter direct care service.

Overview
Evaluation and management (E&M) represents services provided by a physician or other appropriate licensed health care provider. As the name E/M indicates, these medical codes apply to visits and services that involve evaluating and managing patient health. Examples include but are not limited to E&M pertaining to:

- Follow-up visits subsequent to a full well child screen (on a date following the screen)
- Lead risk assessment (lead questionnaire), education about lead poisoning, and follow-up instructions when doing a blood lead draw. (SEE E&M for BLOOD LEAD TESTING)
- Service provided to an existing client at follow-up for an oral problem detected during previous screening service.

DRAFT 4-6-2022

Policy
Contractors serving as a medical home shall follow agency guidance on providing Evaluation & Management. Contractors not serving as a medical home shall follow the guidance for providing Evaluation & Management with blood lead testing policy.

Required Credentials
Must be provided by a licensed healthcare provider (MD, DO, ARNP, PA, RN).

Procedure
E&M can be billed by a PCP serving as a medical home, for services other than blood lead testing. Medical home PCPs shall follow agency policies for expectations and guidance in using this code. Screening Centers not designated as medical homes provide this code with blood lead testing.

Documentation
1. Report the total time of the service (duration).
2. Complete in the MCAH data system:
    - First and last name of service provider & credentials.
    - In the 'Comments' field, reference the client's chart for full detail/ description/ clinical record of the service provided. Specify what the E&M is related to (e.g. lead test).
3. Do not bill E & M related to immunization administration. Instead use 'immunization administration with counseling' (Code 90460/90461).

Billing

1. Use Code 99211
2. This encounter code can only be used once per day per client.

This code **cannot** be used for:

- Providing care coordination services
- E & M on the same day as a full well child screen
- Explaining the purpose of a developmental test, interpretation of the test, anticipatory guidance, and needed referral for evaluation when conducting a developmental or social/emotional screening (These activities are already included in the G0451 and 96127 codes).

DRAFT 4-6-2022

Number: 819
Title: Facilities & Accessibility of Services
Effective Date: 10-01-2022
Revision Date:
Date of Last Review:
Authority:

Overview
This policy/procedure focuses on the requirements of the contractor and subcontractors for location selection, available times of services, as well as state and federal law surrounding accessibility and environment.

Policy
Title V contractors and subcontractors must comply with all relevant federal, state, and local laws regarding maintenance of facilities and accessibility of services, including but not limited to 45 CFR part 84, any applicable provisions of the Americans with Disabilities Act (Public Law 101-336) and the requirements of Public Law 103-227, also known as the Pro-Children Act of 2001, and the Iowa Smokefree Air Act - Iowa Code chapter 142D.

Procedure
Facilities in which Title V project services are provided should be geographically accessible to the population served and should be available at times convenient to those seeking services, i.e.; they should have evening and/or weekend hours in addition to daytime hours, IDPH defines usual business hours as between 8:00 AM and 5:30 PM. Services will be available outside of usual business hours. The facilities should be adequate to provide the necessary services and should be designed to ensure comfort and privacy for clients and to expedite the work of the staff.

Contractors shall work with clients and potential clients in site selection. Contractors shall take into consideration other programs and services available at or near the site for families

Facilities under consideration must meet applicable standards established by the federal, state and local governments (e.g., local fire, building and licensing codes). In general, clinic locations should provide a comfortable gender neutral waiting area, an adequate reception area, offer private areas for client interview; include sufficient number of enclosed single exam rooms to accommodate service needs; and allow for private conversations; provide office space separate from client service areas for staff to make follow-up phone calls and complete documentation; and include a secure storage room area for files and supplies.

Contractors and subcontractors must comply with 45 CFR part 84, which prohibits "discrimination on the basis of handicap in federally assisted programs and activities", and which requires among other things, that recipients of federal funds operate their federally assisted program so that when, viewed in their entirety, they are readily accessible to people with disabilities.

Contractors and subcontractors must also comply with any applicable provisions of the Americans with Disabilities Act (Public Law 101-336). The agency's compliance with the ADA

DRAFT 4-6-2022

and 504 requirements are evaluated during the Administrative On-Site Review. Contractors must comply with ACA Section 1557 which prohibits discrimination based on race, color, national origin, sex, age or disability in health programs and activities that receive federal funds. Section 1557 assists populations that have been most vulnerable to discrimination in health care and health coverage, including: women, LGTBQ, individuals with disability, and individuals with limited English proficiency (LEP).

Contractors and all subcontractors must comply with the requirements of Public Law 103-227, also known as the Pro-Children Act of 2001, and the Iowa Smokefree Air Act - Iowa Code chapter 142D, which prohibits tobacco products, including vaping, in any portion of any indoor facility owned, leased, or contracted by an organization and used routinely for the provision of health, child care, or early childhood development services, education or library services to child under age 18, if the services are funded by federal programs either directly or through state or local governments, by federal grant, contract, loan, or loan guarantee. The law also applies to children's services that are provided in indoor facilities that are contracted, operated, or maintained with such federal funds.

Contractors shall display safety information signage such as weapons, smoking, and animal restrictions (except service animals), prominently at the entrance to the facility.

DRAFT 4-6-2022

Number: 820
Title: Growth Measurements - Child & Adolescent
Effective Date: 10/01/2022
Revision Date:
Date of Last Review:
Authority:

DRAFT 4-6-2022

Overview

Measuring height and weight accurately is important when monitoring an infant or child's health. Height and weight measurements are used to calculate body mass index, or BMI, a measure of healthy versus unhealthy weight. They are also important when tracking a child's growth.

Policy

Contractors shall take comprehensive histories at initial and interval well visits and will include an assessment of growth. Contractors shall have an individual order by a primary care provider, or the client shall meet the criteria of the standing order signed by the medical director for the growth measurement.

Required Credentials

MD, DO, ARNP, PA, RN, CMA

Procedure

Taking Standing Height: Standing height is used to measure children who are more than two years old and can stand without assistance. Children should be measured without shoes and heavy outer clothing such as sweaters and coats.

1. Remove socks and shoes on the child and remove or push aside any barrettes, braids, or hairstyles that might interfere with the measurement. Big hairstyles will need to be flattened as much as possible.
2. Place the child's feet flat and either the knees or feet together in the center of the measuring board with their back to the board.
3. Place the right hand on the shins or knees and push against the board. Make sure that the child's legs are straight. The position of the legs is important. The line that bisects the body from the side is called the "mid-axillary line." Make sure the mid-axillary line is perpendicular to the base of the board. This may mean that the child's feet may not touch the back of the measuring board, particularly in overweight or obese children.
4. Ask the child to look straight ahead. Make sure the child's line of sight (Frankfort Plane) is level with the floor. The line from the hole in the ear to the bottom of the eye socket (Frankfort Plane) should be perpendicular to the board or table. In overweight, obese and older children, when the head is placed in proper position, according to the Frankfort Plane, there will be a space between the back of the child's head and the back of the measuring board. Do not judge the position of the child's head by looking at the top of the head, use the Frankfort Plane.
5. Make sure that the shoulders are level, the hands are at the child's side and the head, shoulder blades and buttocks are against the board, if appropriate.
6. Lower the headpiece on top of the child's head. Make sure that you push through the child's hair.
7. When the child's position is correct, read the measurement to 1/8 inch.

Common Measurement Errors:

- Improper equipment used
- Equipment is not properly installed.
- Footwear, heavy outer clothing, hats or hair barrettes are not removed.
- Feet are not flat on the floor.
- Knees are bent.
- Head is not in the proper position.
- Measurement is not read at eye level.

A.

B. **Weighing Children and Adolescents:** Children and Adolescents should be measured using a beam balance scale or a digital standing scale.

Beam Balance Scale:

1. Ask the child to remove shoes and any heavy clothing such as jackets, sweatshirts, sweaters, etc.
2. Ask the child to step onto the scale. Make sure the child is centered on the platform and the arms are at their side.
3. Move the large 50-pound weight until you find the first notch where the beam falls, then move the weight back one notch.
4. Slowly push the small pound weight across the beam until it is balanced. You may need to move it back and forth in small increments several times to reach balance.
5. Read the measurement to the nearest 1/4 pound.
6. Record the weight on the data collection sheet. Make sure it is accurate and legible.
7. Have the child step off of the scale and return the weights on the beam to zero in preparation for the next measurement. *Note: It is acceptable to take two measurements that agree within ¼ lb and use either one of those measurements.*

Digital Scale:

1. Activate the scale by turning it on. Zeroes will appear on the display panel. Make sure the scale is on "lb" rather than "kg".
2. Ask the child to remove shoes and any heavy clothing such as jackets, sweatshirts, sweaters, etc.
3. Ask the child to step onto the scale. Make sure the child is centered on the platform and the arms are at their side.
4. The weight will appear on the display panel. If the weight changes (e.g., from 22.1 lb to 22.2 lb), record either number. Record the weight to the nearest ¼ lb.
5. Record the weight on the data collection sheet. Make sure it is accurate and legible.

Common Weighing Errors:

- Improper equipment is used.
- Scale is not properly zeroed or balanced.
- Footwear and heavy outer clothing are not removed.
- Individuals are not properly centered on scale platform.
- Child is holding onto Assistant or scale.
- Child is not remaining still on the scale.

DRAFT 4-6-2022

Body Mass Index: Body Mass Index (BMI) is a person's weight in kilograms divided by the square of height in meters. A high BMI can indicate high body fatness. BMI screens for weight categories that may lead to health problems, but it does not diagnose the body fatness or health of an individual.

BMI is the recommended parameter for monitoring the growth of children 24 months and older. BMI can be determined using a handheld calculator. The steps for calculating BMI using pounds and inches are listed below.

1. Convert any fractions to decimals. Examples: 37 pounds 4 ounces = 37.25 pounds 41½ inches = 41.5 inches
2. Insert the values into the formula: [weight (1b.) / height (in.) / height (in.)] X 703 = BMI Example: (37.25 lb. / 41.5 in. / 41.5 in.) X 703 = 15.2

A reference table can also be used to calculate BMI. Click the link for the 2-20 years Boys and the 2-20 years Girls tables from the Centers for Disease Control and Prevention.

The CDC BMI Percentile Calculator for Child and Teen can also be used to calculate BMI. If the BMI-for-age is less than or equal to the 5th percentile, the child is considered underweight. If the BMI-for-age is between the 85th and 94th percentiles, the child is considered to be at risk for being overweight. Children with a BMI equal to or greater than the 95th percentile are considered overweight.

Documentation

Record measurements as soon as they are taken to reduce errors. Plot weight and height against age and weight against height on the CDC growth chart for the children under 2 years of age (see Growth Measurement - Infant). For children 2-20 years, plot weight and height against age and BMI against age on the appropriate growth chart.

DRAFT 4-6-2022

Number: 821
Title: Growth Measurements - Infant
Effective Date: 10/01/2022
Revision Date:
Date of Last Review:
Authority:

Overview
Measuring height and weight accurately is important when monitoring an infant or child's health. Height and weight measurements are used to calculate your body mass index, or BMI, a measure of healthy versus unhealthy weight. They are also important when tracking a child's growth.

Policy
Contractors shall take comprehensive histories at initial and interval well visits including an assessment of growth. Contractors shall have an individual order by a primary care provider, or the client shall meet the criteria of the standing order signed by the medical director for the growth measurement.

Required Credentials
MD, DO, ARNP, PA, RN, CMA

Procedure
Procedure for Taking the Recumbent Length: Recumbent length refers to stature taken while lying down. Recumbent length is used to measure infants and children less than two years of age. Recumbent length can also be used for children two to three years of age who have great difficulty standing on their own; these children must be measured lying down and the measurement should be recorded as recumbent length.

1. Infants should be wearing only a clean disposable diaper and undershirt.
2. A child over the age of one should be wearing only light clothing. Shoes, sweaters, coats, etc. should be removed.
3. If hair or barrettes interfere with placing the child's head directly against the measuring board.
4. Place the sliding foot piece at the end of the measuring board and check to see that it is sliding freely.
5. Lay the child down on their back on the measuring board. *Note: While the infant is on the measuring board, you must hold and control the child so that he/she will not roll off or hit his/her head on the board.*
6. Place the child's head against the headpiece. If the head is not against the headpiece, hold the child at the waist and lift or slide the child towards the headpiece.
7. Check to be sure that the child's head is in the correct position. The line from the hole in the ear to the bottom of the eye socket (Frankfort Plane) should be perpendicular to the board or table, making certain that the child's chin is not tucked in against their chest or stretched too far back.
8. Position the child's body so that the shoulders, back and buttocks are flat along the center of the board.

DRAFT 4-6-2022

9. Place your left hand on the child's knees. Hold the movable foot piece with your right hand and firmly place it against the child's heels. A child's legs and feet can be very strong. You may have to straighten them with your hands.
10. Check the child's position: head against the headpiece with eyes looking straight up, body and legs straight and flat in the center of the measuring board, heels and feet firmly against the foot piece.
11. When the child's position is correct, read and record the length measurement to the nearest 1/8".

Common Errors in Measuring Recumbent Length:

- Improper equipment used.
- Shoes, sandals, socks are not removed.
- Child's head is not in the correct position.
- Child's head is not against the headpiece.
- Legs are not straightened or properly positioned.
- Heels are not flat against the footboard.
- Heels or legs are not flat against the recumbent board.
- Only one leg is extended rather than both legs.

Weighing Infants

Procedure for Weighing Infants/Children using the Beam Balance Scale:

1. Cover the scale with paper.
2. Remove the infant's clothing to a dry diaper.
3. Place the child on his/her back or sitting on the tray of the scale. Make sure the child is centered in the tray and is not touching anything off of the scale tray including other parts of the scale.
4. Move the pound weight until you find the first notch where the beam falls, then move the weight back one notch.
5. Slowly push the ounce weight across the beam until it is balanced. You may need to move it back and forth in small increments several times to reach balance.
6. If the beam continues to move (e.g., when the child moves), steady the beam with your hand. It may be difficult to get the beam as steady as you would like; be patient and as careful as possible.
7. Read and record the measurement to the nearest 1 ounce or 1/16 pound.
8. Remove the child from the tray of the scale and return the weights on the beam to zero in preparation for the next measurement.

Procedure for Weighing Infants/Children using a Digital Infant Scale:

1. Cover the scale with paper.
2. Activate the scale by turning it on. Zeroes will appear on the display panel. Make sure the scale is on "lb" rather than "kg".
3. Remove the infant's clothing to a dry diaper.
4. Place the child on their back or sitting on the tray of the scale.
5. Make sure that the infant or child is not touching anything off of the scale.
6. The weight will appear on the display panel. If the weight changes (e.g. from 15lb 4oz to 15lb 5oz), record either number. Read and record the weight to the nearest 1 ounce.

DRAFT 4-6-2022

Common Errors in Measuring Weight of Infants/Children:

1. Improper equipment is being used.
2. The scale is not properly zeroed or balanced.
3. Necessary clothing is not removed.
4. Child is not placed in the center of the scale tray.
5. Parent is touching the infant/child.
6. Infant/child is touching something off the scale or the scale itself.

Documenting Growth: Record measurements as soon as they are taken to reduce errors. Plot weight and height against age and weight against height on the CDC growth chart for the children under 2 years of age. See the CDC Clinical Growth Charts to download paper copes.

DRAFT 4-6-2022

Number: 822
Title: Head Circumference
Effective Date: 10/01/2022
Revision Date:
Date of Last Review:
Authority:

Overview
Head circumference is a measurement of a child's head around its largest area. It measures the distance from above the eyebrows and ears and around the back of the head. During routine checkups, the distance is measured in centimeters or inches and compared with:

- Past measurements of a child's head circumference.
- Normal ranges for a child's sex and age (weeks, months), based on values that experts have obtained for normal growth rates of infants' and children's heads.

Measurement of the head circumference is an important part of routine well-baby care. During the well-baby exam, a change from the expected normal head growth may alert the health care provider of a possible problem. For example, a head that is larger than normal or that is increasing in size faster than normal may be a sign of several problems, including water on the brain (hydrocephalus). A very small head size (called microcephaly) or very slow growth rate may be a sign that the brain is not developing properly.

DRAFT 4-6-2022

Policy
Head circumference measure is an important part of growth measurement for infants and young children and is conducted at child well-visits until the child is two years old. Contractors shall have an individual order by a primary care provider, or the client shall meet the criteria of the standing order signed by the medical director for the growth measurement.

Required Credentials:
MD, DO, ARNP, PA, RN, CMA

Procedure

- An accurate head circumference measure is obtained with a flexible non-stretchable measuring tape. A plastic tape such that one end inserts into the other is recommended.
- Head circumference is generally measured on infants and children until age two years.
- The tape is positioned just above the eyebrows, above the ears, and around the biggest part of the back of the head. The goal is to locate the maximum circumference of the head.
- Any braids, barrettes, or other hair decorations that will interfere with the measurement should be removed.
- The infant or child may be more comfortable in the arms or on the lap of a parent.
- The tape is pulled snugly to compress the hair and underlying soft tissues.
- The measurement is read to the nearest 0.1 cm or 1/8 inch and recorded on the chart.

- The tape should be repositioned and the head circumference re-measured.
- The measures should agree within 0.2 cm or 1/4 inch.
- If the difference between the measures exceeds the tolerance limit, the infant should be repositioned and re-measured a third time. The average of the two measures in closest agreement is recorded.
- Further evaluation is needed if the CDC Infant Head Circumference Growth Chart reveals a measurement:
    - Above the 95th percentile.
    - Below the 5th percentile.
    - Reflecting a major change in percentile levels from one measurement to the next or over time.

Documentation

Record measurements as soon as they are taken to reduce errors. Plot head circumference against the child's age on the CDC Head circumference-for-age chart for children birth to 36 months of age (click here for boys and here for girls).

DRAFT 4-6-2022

Number: 824
Title: Hearing Testing
Billing Code (s): Pure tone air only - 92551; Speech audiometry threshold only - 92555
Effective Date: 10/01/2022
Revision Date:
Date of Last Review:
Authority: Iowa Code § 135.131, 641 IAC chapter 3

IDPH IOWA Department of PUBLIC HEALTH

Description in Brief

- 92551 Pure tone - air only is a hearing screening for both ears that involves the use of a device that produces a series of tones.
- 92555 Speech Audiometry (threshold only) is a hearing screening.
- OAE hearing screen is not included in Medicaid's Screening Center package and is therefore not a billable service. A child in need of OAE should be referred for further evaluation (e.g., an audiologist).

Overview
Iowa law requires universal hearing screening of all newborns and infants. The primary purpose of newborn hearing screening is to identify newborns who are likely to have hearing loss and who require further evaluation. A secondary objective is to identify newborns with medical conditions that can cause late-onset hearing loss and to establish a plan for continued monitoring of their hearing status.

DRAFT 4-6-2022

Passing a screening does not mean that a child has normal hearing across the frequency range. Because minimal and frequency-specific hearing losses are not targeted by newborn hearing screening programs, newborns with these losses may pass a hearing screening. Because these losses have the potential to interfere with the speech, language, and psychoeducational development of children, monitoring of hearing, speech, and language milestones throughout childhood is essential.

Policy
Hearing screening shall be performed as part of the 4 year old well visit; and again once between the ages of 11 and 14 years, once between 15 and 17 years, and once between 18 and 21 years. Any child not passing a hearing screening, regardless of age, must be referred for evaluation and follow-up. Contractors shall have an individual order by a primary care provider, or the client shall meet the criteria of the standing order signed by the medical director for the screening.

Providers
A licensed healthcare provider (MD, DO, ARNP, PA, RN).

Procedure
Confirm initial screen was completed, verify results and follow up as appropriate. Follow guidelines for best practices from Iowa's Early Hearing Detection and Intervention Program (EHDI).

Newborns and Children Under 6 Months of Age: Newborn infants who have not had an

objective hearing test should be referred to a diagnostic audiology center who specializes in infant screening using one of the latest audiology screening technologies. Infants who do not pass the initial hearing screen and the subsequent rescreening should have appropriate audiology and medical evaluations to confirm the presence of hearing loss before three months. All infants with confirmed hearing loss should be referred for early intervention services before six months of age.

The following risk indicators are associated with either congenital or delayed-onset hearing loss. Heightened surveillance of all children with risk indicators is recommended by the Joint Committee on Infant Hearing Screening. Regardless of whether the infant passed their newborn hearing screen, if they have the following risk indicator, they should be seen by an audiologist at a diagnostic audiology center for a hearing evaluation no later than three months after the occurrence:

- Bacterial and viral meningitis (especially herpes viruses and varicella) or encephalitis
- Congenital Cytomegalovirus (CMV) confirmed in infant
- Extracorporeal membrane oxygenation (ECMO)
- Head injury (especially basal skull/temporal bone fracture)
- Chemotherapy

A child should see an audiologist at a diagnostic audiology center for a hearing evaluation by nine months of age if one or more of the following risk factors are present in the period immediately before or right after birth.

- Family history of hearing loss (permanent, sensorineural hearing loss since childhood)
- Cranio-facial anomalies (includes cleft lip or palate, microtia (abnormally small ear), atresia (blocked or abnormally small ear canal), ear dysplasia, microphthalmia, white forelock, congenital microcephaly, congenital or acquired hydrocephalus, or temporal bone abnormalities
- Exchange transfusion for elevated bilirubin regardless of length of stay NICU stay longer than five days
- Aminoglycoside (includes: Gentamycin, Vancomycin, Kanamycin, Streptomycin, Tobramycin) administered for more than five days
- In utero infections such as herpes, rubella, syphilis, and toxoplasmosis
- Asphyxia or Hypoxic Ischemic Encephalopathy
- Syndromes (includes: Trisomy 21-Down syndrome, Goldenhar, Pierre Robin, CHARGE association, Rubinstein-Taybi, Stickler, Usher, osteopetrosis, Neurofibromatosis type II, Treacher Collins, Hunter syndrome, Friedreich's ataxia, Charcot-Marie-Tooth syndrome or visit the Hereditary Hearing Loss website)

Children Over 6 Months of Age and Adolescents: An objective hearing screening should be performed on all children who do not have a documented objective hearing screening or documented parental refusal. This screening should be conducted by a qualified screener during the well visit or audiologist according to the periodicity schedule. Any child that does not pass the screening should be immediately referred to an audiologist for diagnostic evaluation.

Iowa EPSDT recommends in-office screening using audiometry as part of the well visit, beginning at 4 years. Screen at least once between the ages of 11 and 14 years, once between

DRAFT 4-6-2022

15 and 17 years, and once between 18 and 21 years, using audiometry to include frequencies between 6000-8000 HZ.

Documentation

Complete in MCAH data system - documentation must include the following:

- First and last name of service provider & credentials.
- Reference the client's chart for full detail/ description/ clinical record of the service provided. Include type of screening performed, tool used, results, referral/follow-up needed, and family questions/concerns.
- The correct service code and description.
- Report the total time of the service (duration).

In the client's record: Documentation must adhere to requirements in IAC 441-79.3(2).

DRAFT 4-6-2022

Number: 825
Title: Hemoglobin/Hematocrit
Billing Codes: Hematocrit - 85014; Hemoglobin 85018
Effective Date: 10/01/2022
Revision Date:
Date of Last Review:
Authority:

Description in Brief
- Code 85014: Hematocrit level
- Code 85018: Hemoglobin level

Overview
Iron deficiency (ID) is the most common nutritional deficiency in the world. Iron Deficiency Anemia (IDA) is a common cause of anemia in young children. IDA is associated with psychomotor and cognitive abnormalities in children. Infants and toddlers in the following groups are at highest risk for ID and IDA:
- History of prematurity or low birth weight
- Inadequate nutrition
- Lead exposure
- Weaning to cow's milk and/or formulas with low-iron or no iron before 12 months
- Exclusive breastfeeding beyond 4 months of age without supplemental iron
- Children of low socioeconomic status or with special health needs, feeding problems, or poor growth and development

Policy
Children will have a hemoglobin drawn at 12 months and the risk of anemia assessed at 4 months, 15 months, and at every visit afterwards. Menstruating females should be evaluated for risk of iron deficiency anemia at every visit. Contractors shall have an individual order by a primary care provider, or the client shall meet the criteria of the standing order signed by the medical director for the screening.

DRAFT 4-6-2022

Providers
MD, DO, ARNP, PA, RN, LPN, CMA

Procedure
Anemia Risk Assessment:
Assess the child for any of the following risk factors for anemia. If risk factors are present, plan to draw hemoglobin. Risk factors include:
- Infancy
  - Prematurity
  - Low birth weight
  - Use of low-iron formula or infants not receiving iron fortified formula
  - Early introduction of cow's milk as a major source of nutrition. If infants are not yet consuming a sufficient alternate source of iron-rich foods, replacement of breast milk or formula may lead to insufficient iron intake.
- Early and Middle Childhood (ages 18 month–5 years)

    - At risk of iron deficiency because of special health needs
    - Low-iron diet (e.g., non-meat diet)
    - Environmental factors (e.g., poverty, limited access to food)
- Middle Childhood (6–10 years)
    - Strict vegetarian diet and not receiving an iron supplement Adolescence (11–21 years)
    - Extensive menstrual or other blood loss
    - Low iron intake
    - Previously diagnosed with iron-deficiency anemia

Blood Draw: Three basic methods are used to determine Hb concentration and Hct level:
- Venipuncture with analysis by an automated cell counter,
- Capillary sampling with analysis by a hemoglobin meter, or
- Capillary sampling with a micro hematocrit analysis by centrifuge.

Follow the policy/procedure on blood draws for the procedure on how to properly implement one of the methods above.

Follow-up

Abnormal lead results will need further workup and treatment, such as lead avoidance, possibly abatement, and potentially chelation.

DRAFT 4-6-2022

For abnormal anemia results see Table 1 below, iron replenishment and supplementation may be the first and only step. However, it is important to determine whether abnormalities continue or whether other etiologies exist that warrant further investigation and treatment.

Table 1. Fifth Percentile Cutoffs for Various Measures of Iron Deficiency in Childhood

Age, y	Hgb, g/dL	Hct, %	MCV, fL	ZnPP µg/dL	RDW, %	%TIBC saturation	Ferritin, µg/L
Newborn	<14.0	<42	NA	NA	NA	NA	<40
0.5–2.0	<11.0	<32.9	<77	>80	>14	<16	<15
2.0–4.9	<11.1	<33.0	<79	>70	>14	<16	<15
5.0–7.9	<11.5	<34.5	<80	>70	>14	<16	<15
8.0–11.9	<11.9	<35.4	<80	>70	>14	<16	<15
12.0–15.0 (male)	<12.5	<37.3	<82	>70	>14	<16	<15
12.0–15.0 (female)	<11.8	<35.7	<82	>70	>14	<16	<15
>15.0 (male)	<13.3	<39.7	<85	>70	>14	<16	<15
>15.0 (female)	<12.0	<35.7	<85	>70	>14	<16	<15

Abbreviations: Hct, hematocrit concentration; Hgb; hemoglobin concentration; MCV, mean corpuscular volume; NA, not applicable (no standards available); RDW, red blood cell distribution width; %TIBC, percent total iron-binding capacity; ZnPP, zinc protoporphyrin concentration.

Title: Home Visits/Nursing Home Visits
Billing Codes: Social work home visit - S9127; Nursing home visit - S9123
Effective Date: 10/01/2022
Revision Date:
Date of Last Review:
Authority:

DRAFT 4-6-2022

Description in Brief
Home visit for nursing services (per hour) for the purpose of providing assessment and evaluation of a known medical condition such as failure to thrive, asthma, and diabetes.

Overview
A home visit allows the health worker to assess the home and family situation in order to provide care and health related activities. In performing home visits, it is essential to prepare a plan of visit to meet the needs of the client and achieve the best results of desired outcomes.

Purpose of a nursing home visit include:
1. To assess the living condition of the patient, family and their health practices in order to provide the appropriate services.
2. To give health education regarding the prevention and control of diseases.
3. To establish a close relationship between the care provider and client for the promotion of health.
4. To assess needs and promote the utilization of community services.

Principles of a nursing home visit include:
1. A home visit must have a purpose or objective.
2. Planning for a home visit should make use of available information about the client and family and give priority to the essential needs of the individual/family.
3. Planning and delivery of care should involve the client and family.
4. The plan should be flexible.

Guidelines regarding the frequency of home visits:
1. The physical, psychological, and educational needs of the client and family.
2. The acceptance of the family for the services to be rendered, and their interest in additional services.
3. The policy of the agency
4. Take into account other health agencies and the number of health and human services personnel already involved in the care of a specific family.

Policy
Home visits shall be provided to children and families for the purpose of nursing services and social work services as appropriate based on the needs of the clients. Contractors shall have an individual order by a primary care provider, or the client shall meet the criteria of the standing order signed by the medical director for a nursing home visit.

Required Credentials

Nursing assessment/evaluation must be provided by a RN and the social work home visit must be provided by a BSW or licensed social worker.

Procedure

1. Schedule in advance and at a time that is convenient for the client
2. Review and make changes as needed to an Intake Assessment completed in the past 30 days. If an Intake Assessment has not been completed in the past 30 days. Complete an intake assessment with the client.

- **Home Visit for Nursing Services:** a home visit made for the purpose of providing nursing services include taking a medical history, nursing assessment, evaluation of patient, and plan of care. This service must be provided by a registered nurse. A home visit for nursing services shall include:
    - Focused health history: This collects specific information about a clear health-related issue or need with which a patient presents. The information gathered is used to inform the immediate care of the patient.
    - Nursing assessment
    - Nursing evaluation
    - Nursing services
    - Plan of care
- **Social Work Home Visit:** a home visit made for the purpose of providing social work services including taking a social history, psychosocial assessment, counseling services, and plan of care. This service must be provided by a BSW or licensed social worker.

DRAFT 4-6-2022

Documentation

1. Time in and time out are required for this service. Report the total time of the service (duration).
2. Complete in MCAH data system:
    a. Service fields.
    b. First and last name of service provider & credentials.
    c. In the ‘Comments’ field, reference the client's chart for full detail/ description/ clinical record of the service provided.
3. In the client’s record: Documentation must adhere to requirements in IAC 441-79.3(2).

Billing

1. For a nursing assessment/evaluation home visit use code S9123 (per hour)
    a. For time spent, include only face-to-face time. Do not include travel time or time documenting the service.
    b. A limit of ten units (hours) per client over a period of 200 days is placed on this code Payment for services beyond this limit will require documentation to support the medical need for more visits.
    c. Must be provided by a registered nurse.
    d. Must include:
        - Medical history including chief complaint
        - Nursing assessment
        - Nursing evaluation
        - Plan of care

e. Use code T1001: Nursing assessment/evaluation
f. This is an encounter code and is not based upon a timed unit.
g. Intended for nursing assessment/evaluation outside of the home setting Bill the IME for Medicaid fee-for-service (i.e. WIC clinic or school setting).
h. In the client's record: Documentation must adhere to requirements in IAC 441-79.3(2).

2. For a social work home visit use code S9127 (encounter code)
   a. Must be provided by a BSW or licensed social worker.
   b. Report the total time of the service (duration). This is an encounter code and is not based upon a timed unit.
   c. A home visit for care coordination service cannot also be billed for any portion of the home visit for social work services.
   d. The entirety of the maternal health postpartum home visit is part of the maternal health services. Any care coordination on behalf of the baby is considered part of this postpartum visit. Do not bill the home visit for social work services in addition.

DRAFT 4-6-2022

Resources

- Iowa DHS Medicaid Screening Center Provider Manual
- Iowa EPSDT Periodicity Schedule

Number: 827
Title: Immunizations and Vaccine Administration
Billing codes: Immunization Administration with Counseling - 90460/90461; Initial/subsequent administration of vaccine (single or combination), subcutaneous or intramuscular - 90471/90472; Initial/subsequent administration of vaccine (single or combination) by intranasal or oral means - 90473/90474
Effective Date: 10/01/2022
Revision Date:
Date of Last Review:
Authority: Iowa Code § 139A.8, 641 IAC chapter 7

Description in Brief

1. Administration of immunizations and counseling for children through age 18 includes:
    a. Immunization administration through any route.
    b. Counseling by a qualified health professional.
2. Counseling for each component of the vaccine is required. It shall include reviewing immunization records, explaining the need for the immunizations, and providing anticipatory guidance (education) & follow-up instructions when administering vaccine. It includes provision of the most current VIS.

Overview

Childhood vaccines protect children from a variety of serious or potentially fatal diseases, including diphtheria, measles, mumps, rubella, human papillomavirus, polio, tetanus, whooping cough (pertussis) and others.

Policy

1. Contractors serving as a medical home shall evaluate immunization status at every visit. If vaccinations are due they should be given at that visit as long as there are no contraindications.
2. Non-Medical home contractors shall assess immunization status at each contact and utilize enabling services and referral networks to assure access to immunizations in the client's medical home.
3. Contractors shall have an individual order by a primary care provider, or the client shall meet the criteria of the standing order signed by the medical director for vaccine administration.

DRAFT 4-6-2022

Required Credentials

Must be provided by a licensed healthcare provider (MD, DO, ARNP, PA, RN or LPN).

Procedure

1. **Immunization Administration:** If a gap in immunization access was identified at the time of the RFP, a contractor may have been granted permission to provide vaccine administration as a direct care, gap-filling service. The service of vaccine administration also includes related assessment, education, anticipatory guidance, and follow-up. The following are required only for contractors providing direct care immunization services:
    a. **Staffing and Contingency Plans:** Provide adequate staffing levels of immunization providers (i.e., RN, LPN, CMA) and maintain contingency plans for

those staff so that immunizations are available at all times direct care services are provided.

b. **Training:** Ensure staff, including subcontractors, administering any vaccines and/or providing well or acute care visits to children take the American Academy of Pediatrics HPV Training: HPV: When, Why, and How course within 3 months of the beginning of the project period or upon hire and annually thereafter.
c. **HPV Promotion and Documentation:** Recommend all adolescent vaccines, including HPV vaccine, at each visit to children age 11 years and older. If the HPV vaccine is declined, the contractor shall document the reason for the declination by client/parent/guardian or the medical contraindication in the MCAH data system.
d. **Standing Orders:** Maintain standing orders for immunization services giving all qualified and trained personnel the ability to administer all age appropriate vaccines in accordance with the ACIP Immunization Schedules.
e. **VFC Enrollment:** Participate in the Vaccines for Children (VFC) program. This program supplies federally purchased vaccines at no cost to public and private health care providers throughout the state. Clients eligible to receive VFC provided vaccines include children enrolled in Medicaid, children who do not have health insurance, and children who are American Indian or Alaska Native. In addition, children who have health insurance that does not cover the cost of vaccines are considered to be 'underinsured', and are eligible to receive VFC vaccines at FQHCs, RHCs, and public health facilities. VFC participation requires enrolled providers to maintain and administer all ACIP recommended vaccines. For more information, see the Departments Immunization Program's VFC website.

2. **Assess the need for vaccines:**
   a. The client's immunization status should be reviewed at each contact. Using the client's immunization history, contractors should assess for all routinely recommended vaccines as well as any vaccines that are indicated based on existing medical condition(s), occupation, or other risk factors.
   b. To obtain a client's immunization history, utilize Iowa's Immunization Registry Information System (IRIS) or recommended vaccinations in the MCAH data system or the client's medical records. In most cases, health care providers should only accept written, dated records as evidence of vaccination. If a client has an out-of-state/country immunization record, the health care provider should take time to create an IRIS record for the client and add the historical immunizations.
   c. Missed opportunities to vaccinate should be avoided. If a documented immunization history is not available, administer the vaccines that are indicated based on the client's age, medical condition(s), and other risk factors, such as planned travel.
3. **Screen for contraindications and precautions:**
   a. Before administering any vaccine, clients should be screened for contraindications and precautions, even if the client has previously received that vaccine. The client's health condition or recommendations regarding contraindications and precautions for vaccination may change from one visit to the next.

DRAFT 4-6-2022

   b. To assess clients correctly and consistently, use a standardized, comprehensive screening tool such as those available through the Immunization Action Coalition.
4. **Educate clients/parents about needed vaccines**: Vaccine Information Statements (VISs) are a resource for education of vaccinations. VISs are documents that inform vaccine recipients or their parents about the benefits and risks of a vaccine. Federal law requires VISs be provided when routinely recommended childhood vaccines are administered. The VIS must be given:
   - Before the vaccine is administered
   - Regardless of the age of the person being vaccinated
   - Every time a dose of vaccine is administered, even if the client has received the same vaccine and VIS in the past

   CDC encourages the use of all VISs, whether the vaccine is covered by the law requiring VIS or not. VISs can be provided at the same time as a screening questionnaire, while the client is waiting to be seen. They include information that may help the client or parent respond to the screening questions and can be used by providers during conversations with clients.
5. Contractors and subcontractors shall have standing orders on file giving all qualified and trained personnel the ability to provide immunization counseling and immunization administration.
6. Contractors and subcontractors serving as medical homes shall train all qualified personnel in immunization counseling and administration within 3 months of the beginning of the project period or hire.
7. **After-care instructions:** Client and parent education should also include a discussion of comfort and care strategies after vaccination. After-care instructions should include information for dealing with common side effects such as injection site pain, fever, and fussiness (especially in infants). Instructions should also provide information about when to seek medical attention and when to notify the health care provider about concerns that arise following vaccination. After-care information can be given to clients or parents before vaccines are administered, leaving the parent free to comfort the child immediately after the injection. Pain relievers can be used to treat fever and injection-site pain that might occur after vaccination. In children and adolescents, a non-aspirin-containing pain reliever should be used. Aspirin is not recommended for children and adolescents.
8. **Vaccine Administration:**
   a. **Infection Control**: follow routine infection control procedures when administering vaccines.
   b. **Hand Hygiene:** Hand hygiene is critical to prevent the spread of illness and disease. Hand hygiene should be performed before vaccine preparation, between clients, and any time hands become soiled. Hands should be cleansed with a waterless, alcohol-based hand rub or soap and water. When hands are visibly dirty or contaminated with blood or other body fluids, they should be washed thoroughly with soap and water.
   c. **Gloves:** Gloves should be worn when administering vaccines, including intranasal or oral vaccines, to children and adolescents. Gloves will be changed, and hand hygiene performed between clients. Gloves will not prevent needle stick injuries. Any needle stick injury should be reported immediately to the site supervisor, with appropriate care and follow-up per the organization policies.

DRAFT 4-6-2022

d. **Vaccine Preparation:** Preparing vaccine properly is critical to maintaining the integrity of the vaccine during transfer from the manufacturer's vial to the syringe and, ultimately, to the client. CDC recommends preparing and drawing up vaccines just before administration. During preparation:
   - Follow strict aseptic medication preparation practices.
   - Perform hand hygiene *before* preparing vaccines.
   - Use a designated, clean medication area that is not adjacent to areas where potentially contaminated items are placed.
   - Avoid distractions. Some facilities have a no-interruption zone, where health care professionals can prepare medications without interruptions.
   - Prepare vaccinations for *one* client at a time.
   - Always follow the vaccine manufacturer's directions, located in the package inserts.

e. **Choosing the Correct Vaccine**: Vaccines are available in different presentations, including single-dose vials (SDV), manufacturer-filled syringes (MFS), multidose vials (MDV), oral applicators, and a nasal sprayer. Always check the label on the vial or box to determine:
   - It is the correct vaccine and diluent (if needed).
   - The expiration date has not passed. Expired vaccine or diluent should never be used.

   i. **Single-Dose Vials (SDV)**: Most vaccines are available in SDVs. SDVs do not contain preservatives to help prevent microorganism growth. Therefore, vaccines packaged as SDVs are intended to be punctured once for use in *one* client and for *one* injection. Even if the SDV appears to contain more vaccine than is needed for one client, it should not be used for more than one client. Once the appropriate dosage has been withdrawn, the vial and any leftover contents should be discarded appropriately. SDVs with any leftover vaccine should never be saved to combine leftover contents for later use.

   ii. **Manufacturer-Filled Syringes (MFS)**: MFSs are prepared with a single dose of vaccine and sealed under sterile conditions by the manufacturer. Like SDVs, MFSs do not contain a preservative to help prevent the growth of microorganisms. MFSs are intended for *one* client for *one* injection. Once the sterile seal has been broken, the vaccine should be used or discarded by the end of the workday.

   iii. **Multidose Vials (MDV)**: A MDV contains more than one dose of vaccine. MDVs are labeled by the manufacturer and typically contain an antimicrobial preservative to help prevent the growth of microorganisms. Because MDVs contain a preservative, they can be punctured more than once. MDVs used for more than one client should only be kept and accessed in a dedicated, clean medication preparation area, away from any nearby client treatment areas. This is to prevent inadvertent contamination of the vial through direct or indirect contact with potentially contaminated surfaces or equipment. Only the number of doses indicated in the manufacturer's package insert should be withdrawn from the vial.

DRAFT 4-6-2022

Partial doses from two or more vials should never be combined to obtain a dose of vaccine.

iv. **Oral Applicators and Nasal Spray**: An oral applicator is for use with oral vaccines and contains only one dose of medication. Oral vaccines do not contain a preservative. Rotavirus vaccine is administered using an oral applicator. An intranasal sprayer is used for the live, attenuated influenza vaccine.

f. **Inspect the Vaccine:** Each vaccine and diluent (if needed) should be carefully inspected for damage, particulate matter, or contamination before using. Verify the vaccine has been stored at proper temperatures

g. **Check the Expiration Date of the Vaccine or Diluent**: Determining when a vaccine or diluent expires is an essential step in the vaccine preparation process. The expiration date printed on the vial or box should be checked before preparing the vaccine. When the expiration date has only a month and year, the product may be used up to and including the last day of that month unless the vaccine was contaminated or compromised in some way. If a day is included with the month and year, the product may only be used through the end of that day unless the vaccine was contaminated or compromised in some way.

i. **Beyond-Use Date (BUD):** In some instances, vaccine must be used by a date earlier than the expiration date on the label. This time frame is referred to as the "beyond-use date" (BUD). The BUD supersedes but should never exceed the manufacturer's expiration date. Vaccines should not be used after the BUD. The BUD should be noted on the label, along with the initials of the person making the calculation. Examples of vaccines with BUDs include:

1. Reconstituted vaccines have a limited period for use once the vaccine is mixed with a diluent. This time period is discussed in the package insert.
2. Some MDVs vials have a specified period for use once they have been punctured with a needle. For example, the package insert may state the vaccine must be discarded 28 days after it is first punctured.
3. Some MDVs have a specific number of doses that can be withdrawn. Once the maximum number of doses has been removed, the vial should be discarded, even if residual vaccine remains in the vial.
4. Manufacturer-shortened expiration dates may apply when vaccine is exposed to inappropriate storage conditions. The manufacturer might determine the vaccine can still be used but will expire on an earlier date than the date on the label.

ii. **Reconstitute Lyophilized Vaccine:** Reconstitution is the process of adding a diluent to a dry ingredient to make it a liquid. The lyophilized vaccine (powder or pellet form) and its diluent come together from the manufacturer. Vaccines should be reconstituted according to manufacturer guidelines using only the diluent supplied for a specific vaccine. Diluents vary in volume and composition, and are specifically designed to meet volume, pH balance, and the chemical requirements of

DRAFT 4-6-2022

their corresponding vaccines. A different diluent, a stock vial of sterile water, or normal saline should never be used to reconstitute vaccines. If the wrong diluent is used, the vaccine dose is not valid and must be repeated using the correct diluent. Vaccine should be reconstituted just before administering by following the instructions in the vaccine package insert.

Once reconstituted, the vaccine should be administered within the time frame specified for use in the manufacturer's package insert; otherwise, the vaccine should be discarded. Changing the needle between preparing and administering the vaccine is not necessary unless the needle is contaminated or damaged.

h. **Supplies:** OSHA requires that safety-engineered injection devices (e.g., needle-shielding syringes or needle-free injectors) be used for injectable vaccines in all clinical settings to reduce the risk of needle stick injury and disease transmission. For specific guidance on selecting needles and syringes vaccine type and age and size of the client, see the [CDC Pink Book, Vaccine Administration](#) chapter. General guidance when selecting supplies to administer a vaccine by injection includes:
    - Inspect the packaging; never use supplies with torn or compromised packaging.
    - Some syringes and needles are packaged with an expiration date. If present, check the expiration date. Never use expired supplies.
    - Use a separate syringe and needle for each injection. Never administer a vaccine from the same syringe to more than one client, even if the needle is changed.

9. **Procedural Pain Management:** Vaccinations are the most common source of procedural pain for healthy children and can be a stressful experience for persons of any age. Fear of injections and needle stick pain are often cited as reasons why children and adults refuse vaccines. Evidence-based pharmacologic, physical, and psychological interventions exist to ease the pain associated with injections. Combining the interventions described below has been shown to improve pain relief.
    a. **Inject vaccines rapidly without aspiration**: Aspiration is not recommended before administering a vaccine. Aspiration prior to injection and injecting medication slowly are practices that have not been evaluated scientifically. Aspiration was originally recommended for theoretical safety reasons and injecting medication slowly was thought to decrease pain from sudden distention of muscle tissue. Aspiration can increase pain because of the combined effects of a longer needle-dwelling time in the tissues and shearing action (wiggling) of the needle. There are no reports of any person being injured because of failure to aspirate.
    b. **Inject vaccines that cause the most pain last:** Many persons receive two or more injections at the same clinical visit. Some vaccines cause more pain than others during the injection. Because pain can increase with each injection, the order in which vaccines are injected matters. Some vaccines cause a painful or stinging sensation when injected; examples include measles, mumps, and rubella; pneumococcal conjugate; and human papillomavirus vaccines. Injecting

DRAFT 4-6-2022

the most painful vaccine last when multiple injections are being administered can decrease the pain associated with the injections.

c. **Breastfeeding children during vaccine injection**: Mothers who are breastfeeding should be encouraged to breastfeed children age 2 years or younger before, during, and after vaccination. Several aspects of breastfeeding are thought to decrease pain by multiple mechanisms: being held by the parent, feeling skin-to-skin contact, suckling, being distracted, and ingesting breast milk. Potential adverse events such as gagging or spitting up have not been reported. Alternatives to breastfeeding include bottle-feeding with expressed breast milk or formula throughout the procedure, which simulates aspects of breastfeeding.

d. **Sucrose/glucose**: Children (age 2 years or younger) who are not breastfed during vaccination may be given a sweet-tasting solution such as sucrose or glucose one to two minutes before the injection. The analgesic effect can last for up to 10 minutes following administration and can mitigate vaccine injection pain. Parents should be counseled that sweet-tasting liquids should only be used for the management of pain associated with a procedure such as an injection and not as a comfort measure at home.

e. **Topical pain relievers**: Topical anesthetics block transmission of pain signals from the skin. They decrease the pain as the needle penetrates the skin and reduce the underlying muscle spasm, particularly when more than one injection is administered. These products should be used only for the ages recommended and as directed by the manufacturer. Because using topical anesthetics may require additional time, some planning by the health care provider and parent may be needed. Topical anesthetics can be applied during the usual clinic waiting times, or before the client arrives at the clinic provided parents and clients have been shown how to use them appropriately. There is no evidence that topical anesthetics have an adverse effect on the vaccine immune response.

f. **Oral pain relievers:** The prophylactic use of antipyretics (e.g., acetaminophen and ibuprofen) before or at the time of vaccination is not recommended. There is no evidence these will decrease the pain associated with an injection. In addition, some studies have suggested these medications might suppress the immune response to some vaccine antigens.

g. **Route and Site for Vaccination:** The recommended route and site for each vaccine are based on clinical trials, practical experience, and theoretical considerations. There are five routes used to administer vaccines. Deviation from the recommended route may reduce vaccine efficacy or increase local adverse reactions. Some vaccine doses are not valid if administered using the wrong route, and revaccination is recommended. For the most current site and route recommendations, see the CDC Pink Book, Vaccine Administration chapter.

10. **Multiple Vaccinations:** Children and adults often need more than one vaccine at the same time. Giving more than one vaccine at the same clinical visit is preferred because it helps keep clients up-to-date. Use of combination vaccines can reduce the number of injections. Considerations when administering multiple injections include:

    a. Administer each vaccine in a different injection site. Recommended sites (i.e., vastus lateralis and deltoid muscles) have multiple injection sites. Separate injection sites by 1 inch or more, if possible, so that any local reactions can be differentiated.

DRAFT 4-6-2022

   b. For infants and younger children, if more than two vaccines are being injected into the same limb, the thigh is the preferred site because of the greater muscle mass. For older children and adults, the deltoid muscle can be used for more than one intramuscular injection.
   c. Vaccines that are the most reactive and more likely to cause an enhanced injection site reaction (e.g., DTaP, PCV13) should be administered in different limbs, if possible.
   d. Vaccines that are known to be painful when injected (e.g., HPV, MMR) should be administered after other vaccines.
   e. If both a vaccine and an immune globulin (Ig) preparation are needed (e.g., Td/Tdap and tetanus immune globulin [TIG] or hepatitis B vaccine and hepatitis B immune globulin [HBIG]), administer the vaccine in a separate limb from the immune globulin.

11. **Vaccine Supply and Disposal**: Immediately after use, all syringe/needle devices should be placed in biohazard containers that are closable, puncture-resistant, leak-proof on sides and bottom, and labeled or color-coded. This practice helps prevent accidental needle stick injury and reuse. Used needles should not be recapped or cut or detached from the syringes before disposal.

DRAFT 4-6-2022

Documentation

1. Document the service in the MCAH data system
2. In the ‘Comments’ field reference client’s chart, IRIS, and/or Master Index Card for full description of both the immunizations administered and counseling provided.
3. In the client's chart, IRIS, and/or Master Index Card: Documentation must adhere to requirements in IAC 441-79.3(2) and 641 IAC chapter 7. Note the review of record, need for immunization, anticipatory guidance provided, provision of VIS, date of VIS, follow-up plan, and any parent/guardian concerns or questions.
4. Document immunizations in IRIS.

Billing:

- Typically, VFC vaccine is used for children through age 18 years (at no cost to the agency or to the family). Vaccine may be billed for Medicaid enrolled children over the age of 18 years (ages 19 and 20 years). If there is a shortage of VFC vaccine, an IME Informational Letter will be provided with instructions for billing vaccine. Due to NCCI edits, E&M and Well Child Exam Codes (See IME Informational Letter #1219) will not pay when billed on the same date as 90460.
- Use 90460 for each vaccine administered. Submit your cost per your cost analysis.
- For vaccines with multiple components (combination vaccines): Report 90461 for each additional component beyond the first component in the vaccine. Submit a nominal cost for accounting of the additional components. Examples: HPV: 90460, Influenza: 90460, MMR: 90460, 90461-2 units, Tdap: 90460, 90461-2 units
- Typically, VFC vaccine is used for children through age 18 years (at no cost to the agency or to the family). Vaccine may be billed for Medicaid enrolled children over the age of 18 years (ages 19 and 20 years).
- Use Code 90471 for initial administration of vaccine (single or combination), subcutaneous or intramuscular.

- Use Code 90472 for subsequent administrations of vaccine (single or combination) subcutaneous or intramuscular on the same day as Code 90471.
- Use Code 90473 for administration of one vaccine (single or combination) by intranasal or oral means.
- Do not bill 90471 with 90473.
- For subsequent immunization administration, use either 90472 or 90474 (as appropriate) with 90471 or 90473.
- Do not use these immunization administration codes if using 'immunization administration with counseling' (Code 90460/90461).
- Use Code 90474 for subsequent administrations of vaccine (single or combination) by intranasal or oral means on the same day as Code 90473.
- Bill the appropriate administration code(s) and the code(s) for the VFC vaccine (at $0.00).

DRAFT 4-6-2022

Number: 828
Title: Intimate Partner Violence Screening
Billing Code(s): IPV Screening for an adolescent - 96160; IPV Screening for a caregiver of a child health client - 96161
Effective Date: 10/01/2022
Revision Date:
Date of Last Review:
Authority:

Description in Brief
This is domestic violence screening using the Abuse Assessment Screen (AAS). An adolescent (Code 96160) and a caregiver of a child health client (Code 96161).

Overview
Intimate partner violence (IPV) is considered present when an intimate partner commits physical, sexual, emotional, economic, or psychological assault on the other partner through the use of a pattern of controlling behaviors, including force, coercion, threats, or intimidation. It is known by a variety of names: domestic violence, family violence, wife beating, and battering.

Violence by an intimate partner is very common. It occurs in all socioeconomic groups, ages, races, ethnicities, and among those with and without disabilities. Intimate partner violence occurs in as many as 1 in 4 US households, with an estimated 5.3 million victimizations occurring annually in US women aged 18 and older. Teen dating violence also is common, with 20% to 25% of female high school students reporting physical and/or sexual abuse by a dating partner.

DRAFT 4-6-2022

Policy
Ask all families about IPV. Bright Futures recommends discussing IPV at the prenatal, newborn, 1-month, 9-month, and 4-year visits and discussing interpersonal and dating violence at the middle and late adolescence health supervision visit. Consider screening caregivers at child health supervision visits when signs or symptoms raise concerns (e.g., bruising on the child or caregiver), or if the caregiver says they have a new intimate partner. Consider screening adolescents if they say they have a new intimate partner, when signs or symptoms raise concerns, or during any prenatal visits. Contractors shall have an individual order by a primary care provider, or the client shall meet the criteria of the standing order signed by the medical director for the screening.

Procedure
Listen supportively, but be direct in your questioning if possible. Ask in an effective and efficient manner that becomes routine for all patients.

1. **Caregiver Screening:** Assess the client or caregiver alone without partner, parent or other accompanying persons in attendance**.** Try to assess with children out of the room. If this isn't practical, then ask general questions. If the caregiver gives cues that they are uncomfortable, use alternative methods of screening and discussion. Sample screening questions from Bright Futures include:
    a. Do you always feel safe in your home?

    b. Has your partner or ex-partner ever hit, kicked, or shoved you, or physically hurt you or the baby?
    c. Are you scared that you and/or other caretakers may hurt the baby?
    d. Do you have any questions about your safety at home?
    e. What will you do if you feel afraid? Do you have a plan?
    f. Would you like information on where to go or who to contact if you ever need help?
2. **Adolescent Screening:** No specific tools have been scientifically validated for screening in the pediatric practice. However, several screening tools have been shown to be effective when implemented in primary care pediatric offices, including the 4-question "Child Safety Questionnaire":
    a. Have you ever been in a relationship with someone who has hit you, kicked you, slapped you, punched you, or threatened to hurt you?
    b. Are you currently in a relationship with someone who has hit you, kicked you, slapped you, punched you, sexually abused you, or threatened to hurt you?
    c. Are you in a relationship with someone who yells at you, calls you names, or puts you down?
    d. When you were pregnant did anyone ever physically hurt you?
3. Assure that referral resources are available as needed.
4. Assure that staff providing the service have been appropriately trained.

DRAFT 4-6-2022

What Should You Do if You Identify IPV?
The health care provider's job is not to fix the problem but to provide a safe environment for disclosure and discussion of the issue, support the victim, and begin to help the victim understand their situation and to educate and address the impact of IPV. Provide referrals to social workers; local IPV support groups; or shelters, mental health or counseling, or legal services.

IPV should not be considered child abuse (and therefore, treated as a mandatory report) unless the child, themselves, was directly harmed by the perpetrator. If a health care provider believes they are required to make a mandatory report, they must inform the patient and discuss safety planning to follow best practice and follow mandatory reporting requirements located here.

Required Credentials
Must be provided by an RN or a person with at least a bachelor's degree in social work, counseling, sociology, psychology, family and community service, health or human development, health education, or individual and family studies.

Documentation
1. Report the total time of the service (duration).
2. Complete in the MCAH data system:
    a. Service fields.
    b. First and last name of service provider & credentials.
    c. An AAS form may be completed and attached to the service.
    d. In the 'Comments' field, reference the client's chart for full detail/ description/ clinical record of the service provided as needed to complete the documentation. Capture:

i. Who the domestic violence screening is for – caregiver or adolescent
ii. Name of the screening tool including date/ version of tool
iii. Results/scoring Interpretation of results
iv. Client questions/ concerns
v. Referral/follow-up

3. In the client's record: Documentation must adhere to requirements in IAC 441-79.3(2).
4. Documentation for a domestic violence screen for a caregiver is located in the child's record. Follow agency protocol for confidential documentation of this service to assure safety if a medical record would be requested by individuals with legal access to the medical record such as a child's other parent or adolescent's parents.

Billing

1. Use Code 96160 if the screen is provided for an adolescent.
2. Use Code 96161 for the caregiver of a child health client. Bill under the child's Medicaid number.
3. Codes 96160 and 96161 are encounter codes and are not billed based upon time.

DRAFT 4-6-2022

Number: 829
Title: Lipid Screening
Billing Code(s):
Effective Date: 10/01/2022
Revision Date:
Date of Last Review:
Authority:

Overview
Cardiovascular disease (CVD) is the leading cause of death and morbidity in the United States. Most of the clinical burden of CVD occurs in adulthood. However, research over the last 40 years has increasingly indicated that the process of atherosclerotic CVD begins early in life and is progressive throughout the lifespan. It has also become clear that there is an important genetic component to the disease process that produces susceptibility but that environmental factors, such as diet and physical activity, are equally important in determining the course of the disease process.

DRAFT 4-6-2022

Policy
Contractors serving as a medical home shall perform a risk assessment at the following well child visits: 24 months, and at 4, 6, 8, and 12-17 years of age. Children at high risk should be screened with a fasting lipid profile. Test all children once between 9 and 11 years and once between 17 and 21 years. For universal screening, non-fasting non-HDL cholesterol can be used. Contractors shall have an individual order by a primary care provider, or the client shall meet the criteria of the standing order signed by the medical director for the screening.

Procedure
Risk assessment for dyslipidemia should be done at two, four, six, and eight years, and between 12 and 16 years. Universal lipid screening using the non-fasting, non-HDL total cholesterol should be performed once prepuberty (at 9 to 11 years) and once post puberty (at 17 to 21 years) (American Academy of Pediatrics, 2011).

Risk Assessment
The following are examples of recommended risk factors that can be identified through the personal and family health history and physical measurements (American Academy of Pediatrics, 2017). Some or all these factors may be included in the risk assessment:

- Parent, grandparent, aunt or uncle, or sibling with myocardial infarction (MI); angina; stroke; or coronary artery bypass graft (CABG), stent, or angioplasty at younger than 55 years in males and younger than 65 years in females.
- Parent with total cholesterol ≥240 mg/dL or known dyslipidemia.
- Patient has diabetes, hypertension, or body mass index (BMI) ≥95th percentile or smokes cigarettes.
- Patient has a medical condition that places them at moderate or high risk for dyslipidemia.

Laboratory Testing and Management: Ensure appropriate counseling and other follow-up based on results of the risk assessment (refer to the Anticipatory Guidance section below). Health care providers should use their clinical judgment and consider currently available

evidence to determine what type of evaluation (including laboratory testing) may be appropriate based on the patient's age, personal and family health history, and other factors. Refer to Expert Panel on Integrated Guidelines for Cardiovascular Health and Risk Reduction in Children and Adolescents Summary Report for guidance on laboratory testing and management.

Anticipatory Guidance: There is strong evidence that good nutrition starting at birth has potential for decreasing future risk of cardiovascular disease. Breastfeeding provides sustained cardiovascular benefits. (American Academy of Pediatrics, 2011). For children and young people two years of age and older, counsel following the Dietary Guidelines for Americans. Clinical tools for nutrition and physical activity counseling are available on Let's Go!

DRAFT 4-6-2022

Number: 830
Title: Medical Emergencies
Billing Code(s):
Effective Date: 10-1-2022
Revision Date:
Date of Last Review:
Authority:

Policy
Contractors shall develop emergency protocols, with input from their medical director, that reflect local resources.

Procedure
Emergency situations involving clients and/or staff may occur at any time. All contractors must have written plans for the management of on-site medical and non-medical emergencies. All staff must be familiar with these plans.

1. Medical Emergencies: At a minimum, written protocols must address:
    a. Anaphylaxis
    b. Cardiac arrest
    c. Hemorrhage
    d. Respiratory difficulties
    e. Shock
    f. Syncope
    g. Transportation in a medical emergency
    h. Vaso-vagal reactions
2. Non-Medical Emergencies: At a minimum, written protocols must address:
    a. Bomb threat guidance
    b. Chemical spill
    c. Fire
    d. Intoxicated patient or client
    e. Intruder in the building
    f. Lost or abducted child
    g. Power failure
    h. Severe weather (tornado, flood)

Number: 831
Title: Medication & Allergy Documentation
Billing Code(s):
Effective Date: 10-1-2022
Revision Date:
Date of Last Review:
Authority:

IDPH IOWA Department of PUBLIC HEALTH

Overview

An important component of documentation are medications and allergies. Client medications and allergies must be prominently documented in the clinical record and cannot be overlooked.

Definitions

1. **Current Medications:** Prescribed or over the counter (OTC) medications, dietary supplements and herbal preparations the client is currently taking or frequently using, including medications used for intermittent illness (e.g., migraines or asthma).
2. **Allergies**: An adverse or significantly sensitive reaction to medications, over the counter and herbal preparations or dietary supplements. This can also include significant food, material or environmental sensitivities (e.g., peanuts, latex, and bee stings).

Policy

The client's list of current medications and allergies is reviewed, revised as necessary, and documented in the clinical record at every visit to ensure accuracy; and if allergies are reported, they are documented prominently and consistently in a highly visible location in the client's chart.

Procedure

1. At the beginning of each clinic visit, the health care provider, or designated staff, reviews the medications and allergies lists in the clinical record.
2. If there is a question regarding the accuracy of the information, enter "client states" with the medication information in the client record.
3. If the name of the medication is known but the client is unsure of the dose, "unspecified dose" may be entered in the record.
4. The health care provider reviews all entries during the visit.
5. Medications dispensed or written by the health care provider during a clinic visit are cross-checked with the allergy list prior to dispensing.
6. No matter the format of the clinical record (i.e., electronic medical record, MCAH data system, paper chart, etc.), drug allergies must be located prominently, consistently, and be quickly accessible. The Joint Commission and AAAHC both require centers to place known drug allergies in a "highly visible location in the client's chart", which is commonly interpreted as the front of the chart.

DRAFT 4-6-2022

Number: 832
Title: Mental Health Assessment
Billing Code(s): Mental Health Assessment - H0031
Effective Date: 10/01/2022
Revision Date:
Date of Last Review:
Authority:

Description in Brief
A mental health clinical assessment using a nationally recognized validated tool. This involves an integrated evaluation across a full range of life domains which leads to the development of an effective, comprehensive, and individualized plan of care. It is a thorough assessment of the individual's clinical and psychosocial needs and functional level.

Overview
Identification of mental health problems improves with standardized screening (SAMHSA, 2012). Half of all lifetime cases of mental illness begin by early adolescence (Weitzman & Wegner, 2015). Substantial evidence shows that early mental health interventions help prevent behavior problems and poor school performance (Weitzman & Wegner, 2015).

A mental health clinical assessment involves an integrated evaluation across a full range of life domains which leads to the development of an effective, comprehensive, and individualized plan of care using a nationally recognized, validated tool. It is a thorough assessment of the child's clinical and psychosocial needs and functional level.

Many mental health concerns in the pediatric office setting are elicited through attentive listening, as well as surveillance and screening for potential mental health issues. Surveillance is the routine elicitation of family concerns often performed in the context of a well-child exam. Screening is the practice of using a validated instrument to evaluate a possible condition of concern. See the Mental Health Screening Policy/Procedure for more information.

Persistent or significant adverse childhood experiences, including persistent stress and family dysfunction can lead to the development of behavioral and emotional problems in children. Clinical judgment has not been shown to reliably identify these problems. These issues are often correlated with familial stresses such as poverty, substance abuse, domestic violence, food and housing instability and mental illness among family members. The AAP Preventive guidelines recommend that pediatric primary care providers assess for the presence of these stresses at every well child visit.

The Bright Futures Pediatric Intake Form is a screening tool that can be used to determine if there are areas of concern to provide psychosocial counseling. The form includes questions about: depression, substance abuse, violence, history of abuse, social supports, etc.

Policy
A mental health assessment using an approved, standardized instrument is recommended for all visits age 6 through 11 years, and is required for ages 12 through 20 years.

DRAFT 4-6-2022

Required Credentials

Licensed social worker (LISW, LMSW) or other licensed mental health professional. Qualifications for mental health assessment are instrument-specific; refer to the instrument's manual for more information. Assure that staff providing the service have been appropriately trained.

Procedure

1. The following instruments are recommended. Follow the tool's directions on use:
    a. Pediatric Symptom Checklist (PSC)
    b. Global Appraisal of Individual Needs (GAIN-SS)
2. Assure that referral resources are available. It is critical that children with identified concerns receive or be referred for specialized services. Refer the identified child to their primary care provider. After making a referral, ensure the child or family obtained services without encountering barriers, and that the services were effective.

Documentation

1. Complete in the MCAH data system:
    a. First and last name of service provider & credentials.
    b. Add a "Survey" to the MCAH data system with scores.
    c. In the 'Comments' field, reference the client's chart for full detail/ description/ clinical record of the service provided as needed to complete the documentation. Capture:
        i. Name of the screening tool including date/ version of tool
        ii. Results/scoring
        iii. Interpretation of results
        iv. Client questions/ concerns
        v. Referral/follow-up
2. Document assessment in the visit record. Document screening with the name of the instrument, the score, and anticipatory guidance based on the results given to the parent/caregiver or youth. For positive results, document referral and follow-up plan.

DRAFT 4-6-2022

Billing

Code H0031 - Mental health assessment by non-physician. This is an encounter code and is not billed based upon time.

Number: 834
Title: Nutrition Counseling (Medical Nutrition Therapy) & Counseling for Obesity
Billing Code(s): Initial nutrition assessment & counseling - 97802; Nutrition reassessment and counseling - 97803; Counseling for obesity - G0447
Effective Date: 10/01/2022
Revision Date:
Date of Last Review:
Authority:

Description in Brief

1. Medical nutrition therapy:
    a. Initial nutrition assessment and intervention, face-to-face with the individual
    b. Nutrition reassessment and intervention, face-to-face with the individual
2. Counseling for obesity: This is face-to-face behavioral counseling for obesity.

Overview

Title V Medicaid Screening centers are eligible for reimbursement of nutrition counseling (medical nutrition therapy) services provided by licensed dietitians who are employed by or have contracts with the provider when a nutrition problem or a condition of such severity exists that nutrition counseling beyond that which is normally expected as part of the standard medical management is warranted. Additionally, screening centers are eligible for reimbursement of counseling for obesity. This must be conducted as face-to-face behavioral counseling and provided by a licensed dietitian or an RN.

DRAFT 4-6-2022

Policy

Nutrition and obesity will be assessed at every well child visit. Refer to "Algorithm for the Assessment and Management of Childhood Obesity in Patients 2 Years and Older" from the AAP Institute for Healthy Childhood Weight. Provide anticipatory guidance and intervention as needed. Contractors shall have an individual order by a primary care provider, or the client shall meet the criteria of the standing order signed by the medical director for medical nutrition therapy, nutrition counseling or counseling for obesity.

Required Credentials

Nutrition counseling (AKA Medical nutrition therapy) must be provided by a licensed dietitian. Counseling for obesity must be provided by a licensed dietitian or a RN.

Procedure

Medical nutrition therapy is used for medically necessary therapeutic nutrition services beyond those provided through the WIC program. Assure that criteria for providing this service are met. Medical conditions that can be referred to a licensed dietitian include the following (This is not an all-inclusive list. Other diagnoses may be appropriate and warrant referral to a licensed dietitian.):

- Inadequate or excessive growth. Examples include:
    - Failure to thrive
    - Undesired weight loss
    - Underweight
    - Excessive increase in weight relative to linear growth

    - Major changes in weight-to-height percentile or Body Mass Index (BMI) for the child's age
    - Excessive appetite, or Hyperphagia.
- Inadequate dietary intake. Examples include:
    - Formula intolerance
    - Food allergy
    - Limited variety of foods
    - Limited food resources
    - Poor appetite
- Infant or child feeding problems. Examples include:
    - Poor suck or swallow
    - Breastfeeding difficulties (which may be referred to a certified lactation consultant (CLC))
    - Lack of developmental feeding progress
    - Inappropriate kinds or amounts of feeding offered
    - Limited information or skills of caregiver
    - Food aversions enteral or parenteral feeding
    - Delayed oral motor skills
- Chronic disease requiring nutrition intervention. Examples include:
    - Congenital heart disease
    - Pulmonary disease
    - Renal disease
    - Cystic fibrosis
    - Metabolic disorder
    - Diabetes
    - Gastrointestinal disease
    - Any other genetic disorders requiring nutrition intervention.
- Medical conditions requiring nutrition intervention. Examples include:
    - Iron deficiency anemia
    - High serum lead level
    - Familial hyperlipidemia
    - Hyperlipidemia
    - Pregnancy
- Developmental disability. Examples include:
    - Increased risk of altered energy and nutrient needs
    - Oral-motor or behavioral feeding difficulties
    - Medication-nutrient interaction
    - Tube feedings.
- Psychosocial factors. Examples include behaviors suggesting an eating disorder. Children with an eating disorder should also be referred to community resources and to their primary care provider for evaluation and treatment.

DRAFT 4-6-2022

Individual Nutrition Evaluation and Assessment

Initial evaluations and follow-up assessments document the process of comprehensive data collection, child and family observation, and analysis to determine a child's nutrition status in order to develop a plan of care. The evaluation is based on:

- Informed clinical opinion through objective food record review

- Evaluation of the child's pattern of growth
- Evaluation of area of concern based on the evaluation tool used and medical nutrition therapy.

Documentation

Nutrition Counseling (AKA Medical nutrition therapy)

1. This is face-to-face behavioral counseling for nutrition counseling.
2. Must be provided by a licensed dietitian.
3. Time in and time out are required for this service.
4. In the MCAH data system, first and last name of service provider & credentials is required.
5. In the client's record the documentation must adhere to requirements in IAC 441-79.3(2).

Counseling for Obesity

1. This is face-to-face behavioral counseling for obesity.
2. Must be provided by a licensed dietitian or an RN.
3. Time in and time out are required for this service.
4. In the MCAH data system, first and last name of service provider & credentials is required.
5. In the client's record the documentation must adhere to requirements in IAC 441-79.3(2).

Billing

1. Use Code 97802: Initial nutrition assessment & counseling (15- minute unit)
2. Use Code 97803: Nutrition reassessment and counseling (15- minute unit)
3. For 15 minute units:
   8-22 minutes = 1 unit
   23-37 minutes = 2 units
   38-52 minutes = 3 units
   53-67 minutes = 4 units
4. For Codes 97802 and 97803, a minimum of 8 minutes must be provided to bill the service.
5. Code G0447: Counseling for Obesity

Number: 835
Title: Nutrition Status Evaluation
Billing Code(s):
Effective Date: 10-1-2022
Revision Date:
Date of Last Review:
Authority:

Overview

Nutritional status affects every pediatric patient's response to illness. Good nutrition is important for achieving normal growth and development. Nutritional assessment therefore should be an integral part of the care for every pediatric patient. Routine screening measures for abnormalities of growth should be performed on all pediatric patients. Those patients with chronic illness and those at risk for malnutrition should have detailed nutritional assessments done. Components of a complete nutritional assessment include a medical history, nutritional history including dietary intake, physical examination, anthropometrics (weight, length or stature, head circumference), and biochemical tests of nutritional status. The use of age, gender, and disease-specific growth charts is essential in assessing nutritional status and monitoring nutrition interventions. The importance of accurate measurements using trained personnel and appropriate equipment cannot be overemphasized.

DRAFT 4-6-2022

Policy

Nutritional Status evaluation is a required service to be provided as part of the screening examination.

Procedure

Contractors shall:

1. At every well child visit, assess nutrition and obesity. Refer to "Algorithm for the Assessment and Management of Childhood Obesity in Patients 2 Years and Older" from the AAP Institute for Healthy Childhood Weight. And:
    a. Provide anticipatory guidance.
    b. Provide intervention as needed.
2. Assess the nutritional status of child:
    a. Assure accurate measurements of height and weight. If any of the following apply, consider referral for medical evaluation:
        i. height or weight is above the 95th percentile or below the 5th percentile (See Clinical Growth Charts)
        ii. Greater than a 25% change in height/weight percentile rank
        iii. BMI for age is greater than 95th percentile or less than 5th percentile (for 24 months or older)
        iv. Flat growth curve:
            1. For ages 0-12 months: two months without an increase in weight/age of an infant below the 90th percentile weight/age
            2. For ages 12-36 months: Two months without an increase in weight per age of a child below the 90th percentile weight per age.
            3. For ages 3-10 years: Six months without an increase in weight per age of a child below the 90th percentile weight per age.

b. If age appropriate, screen for iron deficiency anemia (see EPSDT Periodicity Schedule under Hemoglobin and Hematocrit for suggested screening ages).
   i. If any of the following lab tests are below the values for the child's age, consider referral for medical evaluation:

Age	HCT %	HGB gm/dL
0-12 months	32.9%	< 11 (6-12 months)
1-2 years	32.9	11.0
2-5 years	33.0	11.1
5-8 years	34.5	11.4
8-10 years	35.4	11.9

Age	Female		Male	
	HCT %	HGB gm/dL	HCT %	HGB gm/dL
11-12 years	35.4	11.9	35.4	11.9
12-15 years	35.7	11.8	37.3	12.5
15-18 years	35.9	12.0	39.7	13.3
18-21 years	35.7	12.0	39.9	13.6

DRAFT 4-6-2022

c. Discuss dietary practices with parent and/or child to identify:
   i. Diets that are deficient or excessive in one or more nutrients
   ii. Food allergy, intolerance, or aversion
   iii. Inappropriate dietary alterations
   iv. Unusual eating habits (such as extended use of bottle feedings, pica, or abnormal behaviors intended to change body weight)

d. Discuss health issues that may exist with the child, including but not limited to:
   i. Chronic disease requiring a special diet
   ii. Physical handicap or developmental delay that may alter nutrition status
   iii. Metabolic disorder
   iv. Substance use or abuse
   v. Family history of hyperlipidemias
   vi. Any behaviors intended to change body weight, such as self-induced vomiting, binging and purging, use of laxatives or diet pills, skipping meals on a regular basis, excessive exercise

3. Complete physical examination, including dental, with special attention to such general features as pallor, apathy, and irritability. If any of the following apply, consider referral for medical evaluation:
   a. Abnormality of any of the following which indicates poor nutrition: hair, skin or nails, eyes, teeth or gums

    b. Disorders of the thyroid or parotid glands, gastrointestinal disorders, neurological disorders, or skeletal disorders
4. Assess for or high risk cardiovascular disease at 24 months, and at 4, 6, 8, and 12-17 years of age. Children at high risk should be screened with a fasting lipid profile. See “Lipid Screening” Policy/Procedure for more information on screening and testing.

DRAFT 4-6-2022

Number: 836
Title: Provision of Gap-Filling Direct Care Services
Billing Code(s):
Effective Date: 10-1-2022
Revision Date:
Date of Last Review:
Authority:

IDPH IOWA Department of PUBLIC HEALTH

Overview
Title V resources are intended to be utilized following the Title V pyramid with the majority of resources allocated to public health services and systems, followed by enabling services. When these levels of the pyramid fail to assure needed preventive health care, Title V contractors may provide gap-filling direct health care services while continuing to invest primarily in lower pyramid levels to increase community capacity.

Policy
Contractors provide direct care services based on need and in compliance with the Title V pyramid and medical home model.

Procedure
Contractors shall:
- Develop policies and procedures for the provision of each direct care service.
- Obtain individual or standing orders for direct care clinical services.
- Assure staff are appropriately trained and competent to provide the service.
- Assure staff are appropriately credentialed and working within their scope of practice.
- Follow all guidelines outlined in the Administrative Manual.

DRAFT 4-6-2022

Statewide Need-Based Gap-Filling Services:
- Blood lead testing of 12-47 month olds
    - Evaluation and management with lead testing
- Human Papillomavirus vaccine
- Caregiver and client depression screening
- Caregiver and client intimate partner violence screening
- Caregiver and client SBIRT
    - Behavioral Counseling for alcohol misuse
    - Annual alcohol and/or substance abuse screening
- Emotional/behavioral assessment
- Mental health assessment and services
- Psychosocial counseling
- Oral health services
- Health education and anticipatory guidance
- Nursing or social work home visit for provision of a statewide need-based gap-filling service
- Interpretation services
- Non-emergency medical transportation

Health Equity Need-Based Gap-Filling Services

Children from one or more of the priority populations may be provided the following services if minimal enabling services are not successful:

- Nursing or social work home visit
- Immunizations
- Developmental screen

Need-Based Gap Filling Services
Client, parent, caregiver, provider, etc. expresses a specific concern or need for the client.

- Preventive Medicine Counseling
- Nutrition Counseling, Nutrition status evaluation
- Nursing or social work home visit for provision of a need-based gap-filling service
- Growth

Contractors Serving as a Medical Home
Contractors serving as a medical home may provide the full array of Screening Center/EPSDT screening services.

Contractors desiring to serve as a medical home under the Child and Adolescent Health Program must request permission from the State Title V program. See policy Admission to Child & Adolescent Health Services for definition of medical home. The Contractor will need to provide a justification to provide the service and capacity to serve as a comprehensive medical home. Adequate justification includes a lack of primary care providers to provide the service or barriers to accessing these services through primary care providers. This could include documentation of Medically Underserved Area (MUA), Medically Underserved Population (MUP), or Health Professional Shortage Area (HPSA) for the county; data that support the identification of medically underserved populations; and/or data that support a lack of medical practitioners willing to provide well child exams for Medicaid or uninsured/underinsured children. Outreach and service provision in new ways to respond to the needs of one or more of the state identified priority populations may serve as justification.

Contractors serving as a medical home as part of their CAH program shall provide comprehensive well visits for all children enrolled in their program, including all the elements outlined in the EPSDT Periodicity Schedule. In addition, they must have the capacity to provide acute care, ongoing health and disease management.

DRAFT 4-6-2022

Contractors with multiple programs providing direct care
Contractors (and/or their subcontractors) that also provide direct care as part of another provider status, contract or funding source including but not limited to home health, IPHA, MIECHV, ECI, MHDS, Head Start/Early HeadStart, school/school based health clinic, CLPPP, mental health/behavioral health or substance abuse grantee, etc. shall delineate in writing the activities and services provided as part of the CAH program and those provided as part of another program/contract/provider status/funding source. Resources and staff may be braided to meet the needs of the community with duties, funding, activities and services for each program clearly defined, program requirements of each program met and expenses billed appropriately to each funding source. Target populations for each program, program eligibility and program goals shall be outlined. All funding sources and programs shall be disclosed to Title V.

Direct care services provided as part of the CAH program must comply with the policies, procedures, rules and regulations found within this manual, regardless of the funding source. Contractors and subcontractors may not claim exemption to IDPH requirements based upon the payment source for the services provided through the CAH program.

Provision of Direct Care Services Not Otherwise Outlined

Contractors noting a direct care need in the community shall collaborate with community partners to increase capacity and infrastructure through utilization of public health services and systems and enabling services to meet the need in the community.

Contractors unable to solve the community need through public health services and systems and enabling services may propose providing a direct care service to the State Title V program through an exception to policy. This type of exception to policy shall include a detailed documentation of the scope of the problem, efforts to ameliorate the problem, target population, plan for service provision and continued public health services and system and enabling service work that will be maintained to grow community capacity.

DRAFT 4-6-2022

Number: 838
Title: Psychosocial Counseling
Billing Code(s): Mental health services, not otherwise specified - H0046
Effective Date: 10/01/2022
Revision Date:
Date of Last Review:
Authority:

Description in Brief
This is a psychosocial counseling service.

Overview
Psychosocial counseling is provided after a psychosocial concern has been identified (see Mental Health Assessment Policy) to address emotional, situational, and developmental stressors. It is provided in a confidential setting to individuals or families. The goal is to reduce identified risk factors to achieve positive outcomes and optimal child development by reducing distress and enhancing coping skills.

Policy
Psychosocial counseling will be offered to clients and/or families where a psychosocial concern has been identified. If psychosocial counseling is not available by the MCAH contractor, the client will be referred for services. Contractors shall have an individual order by a primary care provider, or the client shall meet the criteria of the standing order signed by the medical director for psychosocial counseling.

Required Credentials
Must be provided by a person with at least a bachelor's degree in social work, counseling, sociology, psychology, family counseling, or a RN.

Procedure
Psychosocial counseling follows the screening and assessment process (see Mental Health Assessment Policy) and bases the components of planning, intervention, and closure on the findings of the screening and assessment.

1. **Planning**: a joint process of counseling and goal setting by the health care provider and client which results in the development of the counseling service plan.
2. **Intervention**: the process of counseling an individual or family during one or more sessions to support the process of overcoming environmental, emotional, or social problems that are affecting the health and well-being of the individual or family members. Intervention includes a follow-up session to assure resolution of issues, reduction of risks, completion of tasks, and/or referrals.
3. **Closure:** the process of determining with the client what progress has been made toward the goals and evaluating the need for further counseling services. Upon discontinuing psychosocial counseling services, a closing summary will be completed indicating the reason for closure, the progress achieved, and any continuing service needs.
4. Appropriate referrals will be made as needed for additional services and/or complicated cases.

DRAFT 4-6-2022

Documentation

1. Report the total time of the service (duration).
2. Complete in the MCAH data system:
    a. First and last name of service provider & credentials.
    b. In the 'Comments' field, reference the client's chart for full detail/ description/ clinical record of the service provided.
3. In the client's record: Documentation must adhere to requirements in IAC 441-79.3(2).

Billing

1. Code H0046 Mental health, not otherwise specified.
2. This is an encounter code and is not billed based upon time.

DRAFT 4-6-2022

Number: 839
Title: Reportable Diseases & Conditions
Effective Date: 10-1-2022
Revision Date:
Date of Last Review:
Authority: Iowa Code § 139A.3, 641 IAC chapter 1

Overview
A notifiable disease is any disease or condition that is required by law to be reported to IDPH. The collation of information allows IDPH to monitor the disease, and provides early warning of possible outbreaks.

Policy
MCAH contractors will comply with the reporting requirements for infectious diseases and conditions as outlined on the IDPH Center for Acute Disease Epidemiology (CADE) Disease Information and Reportable Communicable Diseases and Infectious Conditions webpages.

Required Credentials
MD, DO, ARNP, PA, lab personnel, RN

Procedure
CADE routinely monitors over 45 diseases as well as unusual occurrences of disease (outbreaks). To report diseases immediately, use the 24/7 disease reporting phone hotline: 1-800-362-2736. Diseases can be reported through the following:

- Iowa Disease Surveillance System (IDSS)
- Secure fax: (515) 281-5698
- Phone: 1-800-362-2736
- Mail: CADE, Lucas State Office Building, 321 E. 12th Street, Des Moines, IA 50319-0075
- Iowa Disease Reporting Card

Outbreak Reporting: IMMEDIATELY report to the department outbreaks of any kind, diseases that occur in unusual numbers or circumstances, unusual syndromes, or uncommon diseases. Outbreaks may be infectious, environmental or occupational in origin and include food-borne outbreaks or illness secondary to chemical exposure (e.g., pesticides, anhydrous ammonia).

Bioterrorism Reporting: IMMEDIATELY report diseases, syndromes, poisonings and conditions of any kind suspected or caused by a biological, chemical, or radiological agent or toxin when there is reasonable suspicion that the disease, syndrome, poisoning or condition may be the result of a deliberate act such as terrorism. Examples of these include (but are not limited to) anthrax, mustard gas, sarin gas, ricin, tularemia and smallpox.

Reportable Diseases: Reportable diseases, required timelines for reporting, and how to report are found here.

DRAFT 4-6-2022

Number: 840
Title: Standing Orders
Effective Date: 10-1-2022
Revision Date:
Date of Last Review:
Authority:

Overview

Standing orders are written protocols approved by a physician or other authorized practitioner that allow qualified health care professionals (who are eligible to do so under state law, such as registered nurses) to assess the need for and administer direct care, such as vaccine administration to patients meeting criteria. The qualified health care professionals must also be eligible by state law to administer certain medications, such as epinephrine, under standing orders should a medical emergency (rare event) occur.

Having standing orders in place streamlines practice workflow by eliminating the need to obtain an individual physician's order to vaccinate each patient. Standing orders are straightforward to use. The challenge is to integrate them into the practice setting so they can be used to their full potential. This process requires some preparation up front to assure everyone in the practice understands the reasons why standing orders are being implemented, their role in the implementation of the standing order, and their responsibilities in using standing orders.

DRAFT 4-6-2022

Policy

Standing orders are permitted to be used in MCAH programs for direct care services in compliance with state scope of practice laws. If standing orders are used in the clinical setting, they must be reviewed and approved annually by the agency medical director. Staff implementing standing orders must receive training on said orders, including relevant emergency procedures.

Required Credentials

MD, DO, ARNP are able to create and sign standing orders for clinical staff. RN, LPN, and CMAs are able to implement standing orders within their scope of practice.

Procedure

Standing orders should be specific to the population served, the direct care service being provided, and to the clinical setting in which they are being implemented. In the provision of MCAH clinical care, the following direct care services could be provided using standing orders (this is not an exhaustive list, but provided for illustrative purposes):

- Immunization administration
- Blood draws for hemoglobin and hematocrit, lead, and TB
- TB skin testing
- Vision screening
- Hearing screening
- Speech audiometry

There are many templates available for standing orders. Some are specific to a direct care service, such as immunization administration standing orders from the Immunization Action

Coalition. However, keep in mind that if using this type of standing orders that they come from reputable sources, reflect current practices, and are applicable to the population served.

If a new standing order must be written, use a standard format for all standing orders across a practice. Be sure to address these issues:

- Explain clearly who is responsible for each task,
- Include the date the standing order was written or when it was last reviewed,
- Describe the patient group to whom the order applies, including any contraindications,
- Provide the generic name of any medication or vaccine included in a standing order, the exact dosage, and the route of administration. Follow the Institute for Safe Medication Practices guidelines to avoid error-prone abbreviations, symbols, and dose designations.

DRAFT 4-6-2022

Number: 841
Title: Tuberculosis Risk Assessment & Testing
Billing Code(s): Intradermal TB test, including TB skin test - 86580; TB test, cell mediated immunity measurement of gamma interferon antigen response - 86480
Effective Date: 10/1/2022
Revision Date:
Date of Last Review:
Authority:

Description in Brief

1. IGRA: Blood test for TB (not a skin test)
2. Tuberculosis test using a Mantoux tuberculin skin test (TST)

Overview

TB disease in children under 15 years of age (also called pediatric tuberculosis) is a public health problem of special significance because it is a marker for recent transmission of TB. Also of special significance, infants and young children are more likely than older children and adults to develop life-threatening forms of TB disease (e.g., disseminated TB and TB meningitis). Among children, the greatest numbers of TB cases are seen in children less than 5 years of age, and in adolescents older than 10 years of age.

DRAFT 4-6-2022

Policy

A risk assessment for exposure to tuberculosis (TB) is completed at well child visits ages 1, 6, 12 & 24 months and annually starting at age 3 years. TB testing for latent TB infection (LTBI) (either IGRA or TST, depending on age) will be conducted for children who screen as high-risk. Contractors shall have an individual order by a primary care provider, or the client shall meet the criteria of the standing order signed by the medical director for the screening.

Required Credentials

Tuberculin Skin Tests (TSTs) should be performed, read, and recorded by health care workers trained in the administration and interpretation of TSTs. A licensed, trained health care worker can draw TB blood tests. A licensed health care provider (physician, nurse practitioner, physician assistant) must complete result interpretation and follow-up.

Procedure

Risk Assessment

1. Use the risk assessment tool below to identify asymptomatic children (persons under 18 years) who require testing for latent TB infection (LTBI).
2. Test for LTBI using a Mantoux tuberculin skin test (TST) or an Interferon-Gamma Release Assay blood test (IGRA) (e.g., QuantiFERON®-TB Gold or T-SPOT®), unless an appropriately documented, negative test dated within the past 90 days or appropriately documented positive test result is available.
3. IGRAs are preferred for people who have received the bacille Calmette-Guerin (BCG) vaccine (commonly given to children outside of the United States).
4. Repeat testing should only be done in persons who previously tested negative, and have new risk factors since their last assessment. If the initial negative screening test

occurred prior to 6 months of age, repeat testing should occur at age 6 months or older.

5. A negative TST or IGRA does not rule out active TB disease.
6. For persons with TB symptoms,[4] abnormal chest x-ray consistent with TB disease, or a positive TST or IGRA, Medical homes shall evaluate for active TB disease by obtaining a chest x-ray, symptom screen, performing a physical exam and if indicated,[5] sputum testing (i.e., AFB smears, cultures and nucleic acid amplification). Contact the IDPH TB Control Program at 515-281-7504 or 515-281-8636 for more information and recommendations.

Check the appropriate risk factor boxes below. LTBI testing is recommended for persons with any of the following risk factors.

Risk Factor	Yes	No
Close contact to someone with infectious TB disease		
Birth, travel, or residence in a country with a high TB rate (e.g., any country other than the United States, Canada, Australia, New Zealand, or a country in western or northern Europe)		
Immunosuppression, current or planned – includes but is not limited to HIV infection, organ transplant recipient, treated with TNF-alpha antagonist (e.g., infliximab, etanercept), steroid use equivalent to prednisone ≥15 mg/day for ≥1 month, other immunosuppressive medication use		
Resident of a high-risk congregate setting (e.g., correctional facility, health care facility, homeless shelter, refugee camp)		

DRAFT 4-6-2022

[1] TST documentation must include the date of the test (i.e., month, day, year), the number of millimeters of induration (if no induration, document “0” mm) and interpretation (i.e., positive or negative).
[2] IGRA documentation should include the date of the test (i.e., month, day, year), the qualitative results (i.e., positive, negative, indeterminate or borderline) and the quantitative assay (i.e., Nil, TB and Mitogen concentrations or spot counts).
[3] BCG vaccination is not a contraindication for TST or IGRA testing; disregard BCG history when interpreting test results.
[4] Cough that lasts 3 weeks or longer, chest pain, coughing up blood, weakness or fatigue, weight loss, no appetite, chills, fever, or sweating at night.
[5] Sputum testing is indicated for all patients with chest x-ray findings compatible with TB regardless of TST or IGRA results or certain TB symptoms. Please consult with a TB expert.

Screening with TB Blood Test (IGRA):
The American Academy of Pediatrics (AAP) Red Book (2018-2021) indicates interferon gamma release assay (IGRAs) as the primary TB screening test for clients aged 2 years and older (American Academy of Pediatrics, 2018). For more information, refer to the CDC’s IGRAs – Blood Tests for TB Infection (www.cdc.gov).

TB blood tests, IGRAs detect the presence of *M. tuberculosis* infection by measuring the immune response to TB proteins in whole blood. TB blood tests may be used to identify people

who are likely to benefit from LTBI treatment, including people who are or will be at increased risk of progression to TB disease if infected with *M. tuberculosis*. The two TB blood tests which are commercially available and approved by the U.S. Food and Drug Administration (FDA) as aids in diagnosing *M. tuberculosis* infection are the QuantiFERON®-TB Gold Plus (QFT-Plus) and the T-Spot®.TB test (T-Spot).

Conducting a TB Blood Test:
To conduct a TB blood test, a client's blood samples are mixed with antigens and controls. If a person has *M. tuberculosis* infection, the blood cells in the sample will recognize the antigens and release IFN-γ in response. Health care workers should be properly trained on how to conduct a TB blood test. In general, health care workers should read the instructions from the manufacturer and follow the steps below:

- Confirm arrangements for testing in a qualified laboratory
- Arrange for delivery of the blood sample to the laboratory within the time the laboratory specifies to ensure testing of samples containing viable blood cells
- Draw a blood sample from the client according to the test manufacturer's instructions
- Schedule a follow-up appointment for the client to receive test results
- Provide follow-up evaluation and treatment as needed based on test results

Interpreting TB Blood Test Results:
Qualitative results are reported as positive, negative, indeterminate, invalid, or borderline. Quantitative results are reported as numerical values. Quantitative results may be useful for clinical decision making in combination with the client's risk factors. Health care workers should consider each TB blood test result and its interpretation along with other epidemiologic, historical, physical, and diagnostic findings. Regardless of test results, if a client has signs and symptoms of TB disease or is at high risk for developing TB disease, the client should receive further evaluation.

DRAFT 4-6-2022

False-Positive TB Blood Test Results:
Errors in running and interpreting the test can decrease the accuracy of TB blood tests and lead to false-positive results. Therefore, it is important to perform the test according to the manufacturer's instructions.

False-Negative TB Blood Test Results:
Some people have a negative TB blood test result even though they are infected with *M. tuberculosis*. False-negative results can be caused by many things. For example, false-negative TB blood test results may occur if the TB infection occurred within 8 weeks of testing because it can take 2 to 8 weeks after being infected with *M. tuberculosis* for the body's immune system to mount a response detectable by the test. Thus, negative TB blood test results for contacts of persons with infectious TB disease should be confirmed with a repeat test 8 to 10 weeks after their last exposure to TB. Client's with untreated, advanced HIV infection (or AIDS) or advanced immunosuppression, such as sepsis, can also have false negative results. The following are other factors that can cause a false-negative TB blood test result:

- Incorrect blood sample collection
- Incorrect handling of the blood collection tubes
- Incorrect performance of the assay

Screening with Mantoux Tuberculin Skin Test (TST):
TST, also called the Mantoux tuberculin skin test, is an acceptable alternative for Contractors not serving as a medical home. TSTs are recommended for children under 2 years of age. A positive TST at any age is considered valid. For children 6 months of age and older, a negative TST is considered valid. TSTs may be used for children < 6 months of age, however, a negative TST result in a child of this age is unreliable. IDPH recommends repeating an initial negative TST in an infant after the child reaches 6 months of age.

A TST requires two visits with a health care provider. On the first visit the test is placed; on the second visit the health care provider reads the test.

Administering the TST:
The TST is performed by intradermal injection of 0.1 ml of PPD containing 5 tuberculin units into the volar surface of the forearm. The injection should be made intradermally (just beneath the surface of the skin) with a disposable 27-gauge tuberculin syringe with the needle bevel facing upward. This should produce a discrete, pale elevation of the skin (a wheal) 6 mm to 10 mm in diameter (Figure 2.2). Institutional guidelines regarding universal precautions for infection control (e.g., the use of gloves) should be followed.

Figure 2.2
Administering the Mantoux TST

Reading the TEST:
A health care worker trained to read TEST results should assess the reaction 48 to 72 hours after the injection. Reactions to PPD usually begin 5 to 6 hours after injection, reach a maximum at 48 to 72 hours, and subside over a period of a few days. However, positive reactions often persist for up to 1 week or longer. Health care workers should not ask clients to read their own skin test. The TST is read by palpating the site of injection to find an area of induration (firm swelling). The diameter of the indurated area should be measured across the forearm (Figure 2.3). Erythema (redness) should not be measured (Figure 2.4). Induration, even those classified as negative, should be recorded in millimeters. If no induration is found, “0 mm” should be recorded.

DRAFT 4-6-2022

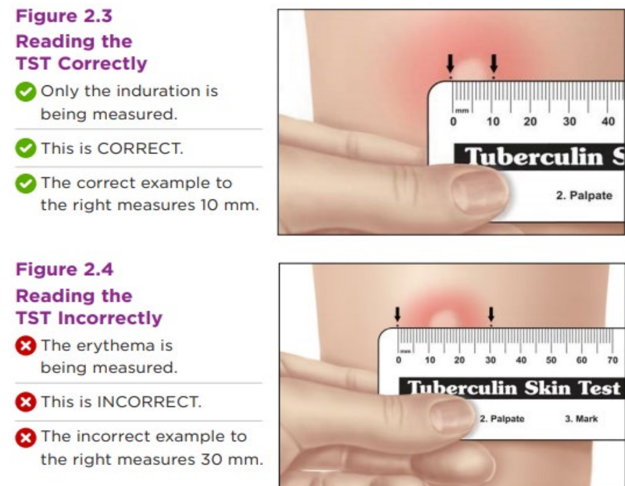

Figure 2.3 Reading the TST Correctly

Figure 2.4 Reading the TST Incorrectly

Interpreting the TEST:

Interpreting TST Reactions Interpretation of TST reactions depends on the measurement of induration in millimeters and the person's risk of TB infection or progression to TB disease if infected.

DRAFT 4-6-2022

Table 2.6
Interpreting the TST Reaction

5 or more millimeters	10 or more millimeters	15 or more millimeters
An induration of **5 or more millimeters** is considered positive for • People living with HIV • Recent contacts of people with infectious TB disease • People who have fibrotic changes on a chest radiograph • Patients with organ transplants • Other immunosuppressed patients (e.g., patients on prolonged therapy with corticosteroids equivalent to/ greater than 15 mg per day of prednisone or those taking TNF-α antagonists)	An induration of **10 or more millimeters** is considered positive for • People born in countries where TB disease is common, including Mexico, the Philippines, Vietnam, India, China, Haiti, and Guatemala • People who abuse drugs or alcohol • Mycobacteriology laboratory workers • People who live or work in high-risk congregate settings (e.g., nursing homes, homeless shelters, or correctional facilities) • People with certain medical conditions that place them at high risk for TB (e.g., silicosis, diabetes mellitus, severe kidney disease, certain types of cancer, or certain intestinal conditions) • People with a low body weight (<90% of ideal body weight) • Children younger than 5 years of age • Infants, children, and adolescents exposed to adults in high-risk categories	An induration of **15 or more millimeters** is considered positive for • People with no known risk factors for TB

TST False-Positive Reactions:
The TST is a valuable tool, but it is not perfect. Several factors can lead to false-positive or false-negative skin test reactions Infection with nontuberculous mycobacteria can sometimes cause a false-positive reaction to the TST. Another cause of a false-positive reaction is bacille Calmette-Guérin (BCG), a vaccine for TB disease that is rarely used in the United States. People who have been vaccinated with BCG may have a positive reaction to the TEST even if they do not have TB infection.

A false-positive reaction may also occur if an incorrect antigen is used or if the results are not measured or interpreted properly.

TST False-Negative Reactions:
Some people have a negative reaction to the TEST even though they have been infected with *M. tuberculosis*. A false-negative reaction can be caused by many things. If a client has a negative TST, but the health care provider suspects active TB disease and/or latent TB infection, contact the IDPH TB Control Program at 515-281-7504 or 515-281-8636 for more information and recommendations.

Documentation

1. Report the total time of the service (duration).
2. Complete in the MCAH data system:
    a. First and last name of service provider & credentials.
    b. In the 'Comments' field, reference the client's chart for full detail/ description/ clinical record of the service provided.
    c. Attach the TB risk assessment
3. In the client's record: Documentation must adhere to requirements in IAC 441-79.3(2).

Billing

1. Code 86480: Tuberculosis test, cell mediated immunity measurement of gamma interferon antigen response (IGRA).
2. Code 86580: Tuberculosis test using a Mantoux tuberculin skin test (TST)

Billing information for the blood draw needed to complete an IGRA can be found in the Blood Draw Policy.

Title: Vision Screening
Billing Code(s): Visual acuity - 99173; Instrument-based ocular screening - 99174
Effective Date: 10/01/2022
Revision Date:
Date of Last Review:
Authority: Iowa Code § 135.39D, 641 IAC chapter 52

IDPH IOWA Department of PUBLIC HEALTH

Description in Brief

- Screening test of visual acuity, quantitative, bilateral. The screening test used must employ graduated visual acuity stimuli that allow a quantitative estimate of visual acuity (e.g. Snellen chart). Code 99173
- Instrument-based Ocular Screening (using approved instrument). Code 99174

Overview

Vision screening remains an important component of regular well child visits. A newborn's vision is mostly blurry, but the visual system develops over time and is fully formed in the teen years. Childhood vision screenings may provide early detection of vision disorders and opportunities for subsequent treatment.

The difference between a vision screening and a comprehensive eye exam is that a comprehensive eye exam diagnoses eye disease. A child shall be referred for an eye exam if a child fails the vision screen or a concern is noted. In addition, if a parent or client reports vision complaint or observes abnormal visual behavior or is at risk of developing eye problems (infants born prematurely, etc.), has a learning disability, developmental delay, neuropsychological condition or behavior issue.

DRAFT 4-6-2022

Required Vision Screening: Iowa law requires that the parent or guardian of a child enrolled in kindergarten or third grade ensure that evidence of a child vision screening be submitted to the school in which the child is enrolled. This may be submitted in electronic form or hard copy, or electronically through Iowa Immunization Registry Information System (IRIS).

Vision screening can be performed in several settings, including a healthcare provider's office. The vision screening can be done up to one year prior to the child's enrollment in kindergarten or third grade, or no later than 6 months after enrollment.

A resource for vision screenings in Iowa is the Iowa KidSight program; a joint project of the Lions Clubs of Iowa and the Department of Ophthalmology & Visual Sciences at the University of Iowa Stead Family Children's Hospital, dedicated to enhancing the early detection and treatment of vision impairments in young children (target population 6 months of age through kindergarten) in Iowa communities through screening and public education.

Policy

Vision will be assessed at each well child visit. Vision screening will be completed as part of a well-child visit following the Iowa Periodicity Schedule, with referral for an eye exam by an ophthalmologist when needed. Contractors shall have an individual order by a primary care provider, or the client shall meet the criteria of the standing order signed by the medical director

for the screening.

Required Credentials
MD, DO, ARNP, PA, RN, LPN, CMA

Procedure
Assess risk at every visit; obtain a history to elicit from parents evidence of any visual difficulties. Vision screening is conducted during the newborn period, between 6-12 months and at 3, 4, 5, 6 8, 10, 12 and 15 years of age.

Newborn- 12 months: Click here to view the full scope of pediatric vision screening as stated by the American Academy of Ophthalmology. A doctor or other trained health professional examines an infant's eyes to check for basic indicators of eye health. The screening includes testing for:

- a "red reflex" (like seeing red eyes in a flash photograph). If the bright light shone in each eye does not return a red reflex, more testing may be needed.
- blink and pupil response
- visual inspection of the eye
- check for healthy eye alignment and movement
- blink and pupil response

12 to 36 months: Between 12 and 36 months, check for healthy eye development including amblyopia (lazy eye). If there is a problem, refer to an ophthalmologist.

3 to 6 years: Between 3 and 6 years, a child's vision and eye alignment should be checked. The screening test of visual acuity shall be quantitative and bilateral. The screening test used must employ graduated visual acuity stimuli that allow a quantitative estimate of visual acuity (e.g. Snellen chart) or be an Instrument-based Ocular Screening using a Medicaid approved instrument. Visual acuity (sharpness of vision, like 20/20 for example) should be tested as soon as the child is old enough to read an eye chart (Snellen eye chart if able to distinguish letters or picture eye chart if not). Refer the child for further evaluation if they show signs of any of the following:

- Struggles to read the eye chart
- misaligned eyes (strabismus)
- "lazy eye" (amblyopia)
- refractive errors (myopia, hyperopia, astigmatism)
- or another focusing problem

5 years and older: At 5, the child is screened for visual acuity and alignment. Nearsightedness (myopia), the most common problem in this age group. More information is available from the Iowa Child Vision Screening Program.

Documentation

1. Report the total time of the service (duration).
2. Complete in MCAH data system the first and last name of service provider & credentials.
3. In the client's record: Documentation must adhere to requirements in IAC 441-79.3(2).

DRAFT 4-6-2022

Billing

1. Use Code 99173 for visual acuity
2. Use Code 99174 for instrument-based ocular screening
3. Medicaid does not allow billing for an on-line vision screen.

Number: 901
Title: Maternal and Child & Adolescent Oral Health Services
Billing Code(s):
Effective Date: 10-1-2016
Revision Date: 10-1-2022
Date of Last Review:
Authority: Iowa Code §135.15, Iowa Administrative Code 641 IAC 76, 641 IAC 50, Social Security Act Title V Sec 506 [42 USC 706]

DRAFT 4-6-2022

Policy
Maternal, Child & Adolescent Health Contractors are responsible for improving the availability and quality of services to improve oral health for infants, children, adolescents, and pregnant people.

Procedure
Through the core public health functions of assessment, policy development and assurance, Contractors work to develop comprehensive oral health service systems by:

- Building public health services and systems
- Providing enabling services to assure access to dental care
- Providing gap-filling direct dental services

Contractors provide these services based on community needs assessment and as specified in the approved application plan on file with the Iowa Department of Public Health (IDPH or Department).

Contractors must provide services with attention to the MCH Pyramid levels, with strongest emphasis on the base of the pyramid. See Policy 102.

Examples of **Public Health Services and Systems** activities regarding oral health include:

- Surveying dental offices to identify oral health care accessibility in the service area
- Establishing regular, personal contact with dentists to advocate for children, pregnant people and families
- Developing referral tracking systems with local dental offices
- Educating and training physicians on oral health
- Conducting in-service staff trainings to develop oral health education, care coordination and referral protocols
- Establishing relationships with school health staff to assure oral health education and prevention services
- Developing and presenting oral health information for the board of health
- Participating in the local Community Health Needs Assessment and Health Improvement Plan (CHNA-HIP) process
- Conducting strategic planning with local oral health coalitions and other forums to assess community oral health needs
- Planning and implementing activities with community partners, such as “Give Kids a Smile Day”
- Organizing open mouth surveys
- Providing oral health education for Head Start parents or prenatal classes
- Providing oral screenings at a community event (e.g. health fair)
- Providing oral screenings for open mouth surveys

- Providing gap-filling screenings for children unable to meet the school dental screening requirement
- Promoting oral health
- Sharing oral health information with local organizations that have interest in the health of women and children
- Meeting with child care providers to evaluate and implement oral health programs
- Coordinating the school dental screening requirement with local boards of health, schools and providers
- Promoting early oral health care through hospital delivery centers, pediatricians and/or obstetrician/gynecologists.

Examples of **Enabling** activities regarding oral health include:

- Dental care coordination
- Outreach to dentists to accept referrals
- Referrals to dentists, medical providers, and community resources
- Translation/interpretation services
- Arranging transportation services for clients
- Outreach and enrollment assistance for public or private dental insurance
- Assuring health literacy of materials created

Examples of **Gap-Filling Direct Services** are found in Policy 907.

Bureau of Oral and Health Delivery System (OHDS) staff within the Department are available upon request to provide consultation and technical assistance for Contractors.

Resources

The Iowa Administrative Code (IAC) 641 IAC 50 describes the purpose and responsibilities of the state oral health program and dental director. Chapter 641 IAC 50 rules are found at: https://www.legis.iowa.gov/law/administrativeRules/rules?agency=641&chapter=50&pubDate=04-07-2010.

DRAFT 4-6-2022

Number: 902
Title: The I-Smile™ Program
Billing Code(s):
Effective Date: 10-1-2016
Revision Date:
Date of Last Review:
Authority: Iowa Code § 135.15, Iowa Administrative Code 641 IAC 50

DRAFT 4-6-2022

Overview

In 2005, the Iowa legislature mandated that Medicaid-enrolled children age 12 and younger have a designated dental home and be provided with dental screenings and preventive, diagnostic, treatment and emergency services as identified in the oral health standards under the Early and Periodic Screening, Diagnosis and Treatment (EPSDT) program. The I-Smile™ program was developed in response to this mandate and serves as the comprehensive program to improve the oral health of Iowa children and pregnant people.

Good oral health allows children the ability to eat well, grow and thrive, concentrate on learning, feel positive about their appearance, and improve social interactions, thus contributing to overall well-being and reducing future dental and medical costs. To assure the oral health of Iowa's at-risk children, I-Smile™ is the oral health component of the Child and Adolescent Health (CAH) program and is a collaborative partner program for the Maternal Health (MH) program to assure oral health during pregnancy. I-Smile™ connects children and families with dental, medical, and community resources to ensure a lifetime of health and wellness. The Department provides funding for I-Smile™ to CAH Contractors through an application process.

Policy

Each CAH Contractor must have an Iowa-licensed dental hygienist serving as the ***I-Smile™ Coordinator*** for its Collaborative Service Area (CSA). The I-Smile™ Coordinator must work at least 32 hours a week on activities to build local public health system capacity and to ensure provision of enabling and population-based oral health services. The I-Smile™ Coordinator is the single point of contact for oral health activities in each CSA and is included on the Key Personnel Form for CAH Contractors. The I-Smile™ Coordinator is also required to collaborate with the MH Contractor for the CSA.

Each CAH Contractor must have an Iowa-licensed registered dental hygienist (RDH) or registered dental assistant (RDA) to serve as the ***Direct Dental Service Planner*** (DDSP). The DDSP assists the I-Smile™ Coordinator by planning and coordinating direct dental services provided by the Contractor. The DDSP may provide direct dental services. Additional staffing for oral health services must be sufficient to adequately reflect the CSA needs, including the number of at-risk children and size of the CSA.

Each MH Contractor must ensure collaboration between the I-Smile™ Coordinator and the local MH Program Coordinator/program staff. This will include meeting with the I-Smile™ four times a year; ensuring MH staff are trained prior to providing direct dental services; and developing oral health protocols.

Procedure

The I-Smile™ Coordinator, with assistance from the CAH project director and other applicable staff, is responsible for developing and implementing activities within the CSA. Activities will be developed annually and submitted as part of the CAH program application process. I-Smile™ activities must be based on the needs of the CSA; all counties must be regularly assessed to determine available resources and gaps in oral health services. I-Smile™ Coordinators must

participate in educational meetings as determined by the Department.

The I-Smile™ Coordinator is responsible for implementing the following **I-Smile™ strategies**. Each strategy listed includes examples of activities. More detail is found in the most current I-Smile™ Coordinator Handbook.

1. Develop and build local partnerships in the community to increase awareness about oral health – consider entities such as:
   - Local public health entities
   - Dental and medical providers
   - School nurses and administrators
   - WIC program
   - Head Start
   - Businesses
   - Civic and other community organizations
   - Food banks
   - Faith-based organizations

2. Address oral health issues of county residents through linkage with local boards of health;
   - Provide I-Smile™ program updates to each local board of health
   - Participate in local Community Health Needs Assessment and Health Improvement Plan (CHNA-HIP) process
   - Assist with the school screening audit process and report to the local board(s) of health
   - Assist in assessment, policy development, and assurance of local oral health initiatives

3. Establish dental referral networks using outreach visits to dental offices;
   - Promote age 1 dental visits
   - Encourage participation in Medicaid and Hawki and/or taking vouchers
   - Offer training on seeing very young children to help ensure that young children have access to a dentist
   - Develop relationships with dentists and dental office staff

4. Ensure dental care coordination and referral services for families to facilitate dental visits for regular preventive and restorative care;
   - Establish a dental referral list (e.g. dentists who accept Medicaid, dentists who see young children, dentists who see new patients)
   - Assist clients with locating dentists and scheduling appointments
   - Remind clients that periodic oral screenings or exams are due
   - Counsel clients about the importance of keeping appointments
   - Provide follow-up to assure that oral health care was received
   - Arrange support services such as transportation, child care or translation/interpreter services
   - Assist families with finding payment sources for dental care
   - Reinforce anticipatory guidance and oral health education
   - Link families to other medical and community services (e.g., immunizations, WIC)

5. Conduct program planning and regular needs assessments;

DRAFT 4-6-2022

- Participate in community health planning and needs assessments
- Review, monitor, and use qualitative and quantitative data to share the I-Smile™ story with local partners and policymakers
- Use local data to develop annual work plans

6. Develop and maintain protocols and provide training to ensure competency of direct care, informing, and care coordination CAH staff regarding oral health;
   - Develop protocols – or step-by-step descriptions – about how Contractor staff and subcontractors will provide dental care coordination and direct dental services
   - Review protocols at least annually and update as needed based on program or policy changes or for quality improvement
   - Provide annual education and training for care coordination and informing staff to ensure an understanding about the importance of oral health and early and regular dental care and the need to link families to preventive and restorative care
   - Provide training about dental insurance options, including the Hawki dental-only plan
   - Train all direct service staff each year on use of the I-Smile™ risk assessment, proper techniques, infection control, and appropriate oral health education topics

7. Collaborate with the Maternal Health Contractor within the collaborative service area to improve oral health and birth outcomes for low-income women, as well as ensure optimal oral health for their infants;
   - Offer training or assistance to assure appropriate and quality dental care coordination
   - Train direct care staff about providing gap-filling direct dental services

8. Provide outreach visits to medical providers to ensure they are aware of oral health as part of overall health;
   - Train non-dental primary care providers, such as physicians, nurse practitioners, registered nurses and physician's assistants, to provide oral screenings, fluoride varnish applications and education as appropriate within the provider's scope of practice
   - Provide I-Smile™ referral information and patient education materials to hospitals, free clinics, and medical offices

9. Promote oral health, creating awareness and sharing oral health messages;
   - Use social media, newspaper ads, and other communication avenues
   - Develop and distribute oral health promotion and educational materials within communities
   - Participate in community events and meetings to incorporate oral health within health and social initiatives

10. Ensure provision of gap-filling preventive dental services for underserved children, including implementation of the I-Smile™ @ School program
    - Oral screenings
    - Fluoride varnish applications
    - Silver diamine fluoride applications
    - Dental sealants
    - Oral hygiene instruction

The Direct Dental Service Planner (DDSP) assists the I-Smile™ Coordinator by planning and

DRAFT 4-6-2022

coordinating direct dental services (including I-Smile™ @ School) by:

1. Organizing direct service provider schedules;
2. Setting up locations/direct service sites;
3. Ordering supplies;
4. Distributing and collecting forms (e.g., consent forms); and
5. Ensuring accurate data entry.

Other responsibilities should include providing preventive services, providing care coordination and completing documentation and data entry.

Refer to the most recent I-Smile™ Coordinator Handbook, for additional information.

DRAFT 4-6-2022

Number: 903
Title: The I-Smile™ @ School Program
Billing Code(s):
Effective Date: 10-1-2016
Revision Date: 10-1-2022
Date of Last Review:
Authority: Iowa Code § 135.15, Iowa Administrative Code 441 IAC 84; 42 CFR 441, Subpart B

Overview
A dental sealant is a tooth-colored material applied to the pit-and-fissure surface of posterior teeth. Sealants provide a physical barrier that prevents food debris and decay-causing bacteria from collecting in the pits and fissures of vulnerable teeth to prevent future tooth decay.
A school-based sealant program is an evidence-based approach that uses teams of dental providers (which may include dentists, dental hygienists, and/or dental assistants) to apply dental sealants for at-risk children in schools. Iowa's program is called I-Smile™ @ School.

Policy
I-Smile™ @ School is a component of I-Smile™, based on all three levels of the MCH pyramid. CAH Contractors must administer I-Smile™ @ School in all eligible schools within the collaborative service area (CSA). (To avoid duplication of services, the I-Smile™ @ School program will not be implemented in schools served by other non-IDPH school-based sealant programs.) I-Smile™ @ School provides preventive dental services for second and third grade children in schools with 40 percent or greater free/reduced lunch rate participation and/or those eligible for Community Eligibility Provision (CEP).

DRAFT 4-6-2022

Procedure
The I-Smile™ Coordinator will assure the implementation of the I-Smile™ @ School program through oversight of the Direct Dental Service Planner (DDSP).

To ensure that all I-Smile™ @ School guidelines are followed and requirements are met, the DDSP will:

1. **Assess School Eligibility:** Annually assess eligibility of all elementary and junior high/middle schools in the service area. This annual assessment includes a review of free/reduced lunch rates and determination of schools served by other programs.
2. **Complete the Program Workbook:** As part of the annual CAH application process, complete the I-Smile™ @ School Program Workbook.
3. **Implement Program:**
    a. Partner with local schools (e.g., schedule dates, distribute forms)
    b. Use appropriate staff (Iowa-licensed dental hygienists, dental assistants, dentists when indicated).
    c. Assure provision of direct services (screening, risk assessment, sealants, and fluoride varnish) to students with consent in participating schools (regardless of payer source).
    d. Ensure that the minimum number of students have been screened each year (as determined by the Department).
    e. Offer students in second and third grades the program services. Grades 1, 4, 5, 6, 7 and 8 may also be served. Contractors may request an exception to policy if additional grades are anticipated (e.g., kindergarten or 9th grade).
    f. Consider providing classroom education, as able.

4. **Follow Program Guidelines:**
    a. Use appropriate equipment, supplies, techniques and procedures.
    b. Use I-Smile™ @ School outreach and promotion materials as directed

throughout the project period.
c. Use standardized forms and materials.
d. Assure billing of services provided to Medicaid-enrolled students.
e. Assure provision of care coordination for children/adolescents identified with dental treatment needs by referring students to dental offices for care, assisting families in making appointments, assisting families in finding payment sources for care, and educating families about the need for good oral health and regular care.
f. Assure use of Medicaid Administrative Funds (MAF) for dental care coordination services, when applicable.
g. Assure data entry of all services and consent tracking into the Department's MCAH data system.
h. Attend meetings as required by the Department.

For more information see the I-Smile™ @ School Program Manual.

DRAFT 4-6-2022

Number: 904
Title: MCAH Oral Health Funding
Billing Code(s):
Effective Date: 10-1-2016
Revision Date: 10-1-2022
Date of Last Review:
Authority: Iowa Code § 135.15, Iowa Administrative Code 641 IAC 76, 641 IAC 50, Social Security Act Title V Section 506 [42 USC 706]

DRAFT 4-6-2022

Policy
MH and CAH Contractors shall use appropriate available funding for activities to improve the availability and quality of services to improve oral health for infants, children, adolescents, and pregnant people according to Department guidelines.

Procedures
CH-Dental Funding (CAH)
CAH contractors shall use CH-Dental grant funds for:
- Costs for activities to build public health system capacity that provide support for developing and maintaining comprehensive oral health service systems in communities;
- Costs associated with provision of preventive direct dental services provided by Contractor professional staff (dental hygienists, nurses, nurse practitioners, physician assistants) for children and adolescents eligible for Title V; and/or
- Reimbursement, at Medicaid approved rates, to local dentists providing a limited level of preventive and/or restorative dental services for children and adolescents eligible for Title V (dental vouchers).

CH-Dental Funding cannot be used to support direct dental services provided within federally qualified health center (FQHC) dental clinics.

See Policy 106 Child & Adolescent Health Program eligibility & Voluntary Participation regarding Title V eligibility requirements.

I-Smile™ Funding (CAH)
CAH contractors shall use I-Smile™ grant funds for the following:
- Costs associated with building public health systems capacity, including assurance of population-based oral health services and non-billable enabling services, to develop local systems to assure dental access for Medicaid-enrolled children; and
- Costs associated with maintaining a dental hygienist as the I-Smile™ Coordinator, responsible for implementing the Contractor's I-Smile™ project activities and ensuring integration and completion of I-Smile™ strategies within the oral health program plan.

I-Smile™ funds <u>cannot</u> be used for any costs associated with the provision of direct dental services, including salaries and purchase of supplies for direct dental services.

I-Smile™ @ School Funding (CAH)
Based on Department guidelines, CAH Contractors shall use I-Smile™ @ School grant funds for:
- Costs associated with implementing a school-based sealant program (including planning, personnel, supplies, travel) within schools at 40% or greater free/reduced

lunch participation and/or eligibility for the Community Eligibility Provision (CE) designation based on Iowa Department of Education data

No more than 20 percent of I-Smile™ @ School grant funds may be used for time spent by professional staff to provide direct care. For the purposes of the I-Smile™ @ School Program, direct service costs only include personnel time spent providing oral screenings and application of sealant and/or fluoride varnish (e.g., time in the mouth).

Funds may also be used for costs associated with providing oral health classroom education to second and third and 3rd grade students.

Other funds may be used (e.g., from local organizations, private foundations) to serve schools with lower than 40% free/reduced lunch rates. See Policy 903.

Maternal Oral Health Funding (MH)
There is no oral health-specific grant funding for MH contractors. However, Title V MH grant funds shall be used for activities to build public health services and systems related to oral health and enabling services. Funding may also be used to provide direct dental services for Title V clients.

Hawki and Medicaid Billing/Reimbursement for Direct Dental Services (CAH and MH)
When direct dental services are provided for Hawki or Medicaid-enrolled infants, children, adolescents, and/or pregnant people, MH and CAH Contractors shall bill the client's assigned dental plan. Contractors must bill their established costs, determined via their cost analysis report. The MCAH Cost Analysis Report must be submitted to the Department at the beginning of each multi-year project period and as needed after. See 503 for information on cost analysis.

Reimbursement for Dental Care Coordination Services (CAH and MH)
MH and CAH Contractors must bill use of their Medicaid Administrative Funds (MAF) to the Department for time spent providing dental care coordination services to Medicaid-enrolled clients and the support work to ensure the services are complete. See 408 for information on MAF.

Other Funding Sources (CAH and MH)
Contractors are encouraged to seek other funds (e.g., foundation funding, Early Childhood Iowa, community grants) to enhance oral health service systems. Possible use of these supplemental funds may include: reimbursing dentists for treatment of eligible clients; contracting with an agency dental hygienist or nurse to provide oral screenings and fluoride varnish for clients not enrolled on Medicaid; oral health promotion; and purchasing oral health supplies for clients.

- Iowa Administrative Code 641 IAC 76 (135)
- Social Security Act Title V Section 506 [42 USC 706]

DRAFT 4-6-2022

Number: 905
Title: MH Client Enrollment as “oral health only”
Billing Code(s):
Effective Date: 10-1-2016
Revision Date: 10-1-2022
Date of Last Review:
Authority: Iowa Code § 135.15, Iowa Administrative Code 641 IAC 76, 641 IAC 50, Social Security Act Title V Section 506 [42 USC 706]

Policy
MH Contractors may enroll a client as “oral health only” if other MH program services are declined by the client and oral health services and assistance are needed.

“Oral health only” clients must be enrolled and also discharged on the same day, unless follow up services are needed.

Procedure
Full enrollment in the MH program should always be encouraged, but in these situations described, it is not required.

Sources
- Iowa Administrative Code 641 IAC 76 (135)
- Social Security Act Title V Section 506 [42 USC 706]

DRAFT 4-6-2022

Number: 906
Title: Dental Care Coordination
Billing Code(s):
Effective Date: 10-1-2016
Revision Date: 10-1-2022
Date of Last Review:
Authority: Iowa Code § 135.15, Iowa Administrative Code 641 IAC 76, 641 IAC 50, Social Security Act Title V Section 506 [42 USC 706]

Policy
MCAH Contractors must ensure dental care coordination and referral services are provided for Title V-eligible and/or Medicaid-enrolled clients to facilitate dental visits for regular preventive and restorative care. See Policy 703 for further guidance on care coordination.

CAH Contractors will:
- Promote the benefits of preventive oral health care
- Provide the names and locations of participating dentists
- Encourage families to establish regular dental visits beginning at age 1
- Inform families about available payment sources for oral health care
- Ensure dental care coordination services for children are provided based on Iowa's EPSDT dental periodicity schedule found here

MH and CAH Contractors will ensure that all staff who provide dental care coordination are trained using the Department's Dental Care Coordination Protocol which outlines procedures based on the MH and CAH oral health risk assessments.

MH Contractors will assess pregnant people regarding their access to oral health care and methods to pay for dental care. Medicaid presumptive eligibility determinations are provided for pregnant women who have no health insurance. See Policy 704 for presumptive eligibility guidelines.

Procedure
Dental care coordination may be provided on the same day as a dental direct service and documented in the MCAH data system as care coordination; however, the payment source for care coordination provided on the same day as a direct service must be documented as "other" since the direct service reimbursement pays for the care coordination time.

Contractors shall review data for quality and appropriateness of care coordination provided and use findings to identify gaps or issues in care coordination protocols and adjust as needed.

Examples of dental care coordination activities include:
- Assisting clients with locating dentists
- Assisting with scheduling dentist appointments
- Reminding clients that periodic oral screenings or exams are due
- Counseling clients about the importance of keeping appointments
- Providing follow-up to assure that oral health care was received
- Arranging support services such as transportation, child care or translation/interpreter services
- Assisting families with finding payment sources for dental care
- Reinforcing anticipatory guidance and oral health education
- Linking families to other medical and community services (e.g., immunizations, WIC)

DRAFT 4-6-2022

Documentation
Contractors must enter all documentation for care coordination within the MCAH Data System. See Policy 703 for care coordination documentation requirements.

Number: 907
Title: Direct Dental Services Provided by Contractor
Billing Code(s):
Effective Date: 10-1-2016
Revision Date: 10-1-2022
Date of Last Review:
Authority: Iowa Code § 135.15, Iowa Administrative Code 641 IAC 76, 641 IAC 50, Social Security Act Title V Section 506 [42 USC 706]

Overview
Data shows that MCAH clients are more likely to face challenges accessing care from dentists than from medical providers. As a result, gap-filling direct dental services are an important way for MCAH Contractors to help clients prevent dental disease.

Policy
CAH Contractors must provide direct dental services for children ages 0-2 years. CAH Contractors must also provide direct dental services as part of I-Smile™ @ School in eligible CSA schools. See Policy 903.

All direct dental services must be provided according to Department protocols and provider scope of practice regulations. Refer to Policies 919 and 920 of this manual for information on dental hygienist and dental assistant supervision.

Training for MH and CAH direct service staff must be provided by the CSA I-Smile™ Coordinator using IDPH-approved training materials. Documentation of the training for non-dental staff, including a list of personnel trained, must be completed on approved forms and submitted to the Department's Bureau or Oral and Health Delivery System (OHDS).

Contractors must assure that consent is obtained prior to performing oral health services for MH and CAH clients.

An oral screening must always be completed on a client prior to the provision of fluoride varnish, dental sealants, silver diamine fluoride, prophylaxes or radiographs.

Referrals for regular dental care and dental care coordination services must also be provided for pregnant people and children receiving direct dental services by a Contractor.

Direct dental services and care coordination must be documented in the client's health record, including the MCAH data system.

DRAFT 4-6-2022

Procedure
It is recommended that direct dental services be provided by a dental hygienist employed or contracted by the Contractor. However, based on needs assessment and workforce availability, registered nurses, nurse practitioners and physician assistants who are employed or contracted may also provide direct dental services, if trained by the I-Smile™ Coordinator for the CSA.

Direct dental services that MCAH Contractors may provide are listed as follows. Allowable providers for each service are also included.

Service	Allowable providers	Contractor	Additional Policy
Oral screening	RDH, RN, ARNP, PA	MH, CAH	908, 909
Risk assessment	RDH, RN, ARNP, PA	MH, CAH	908, 909
Fluoride varnish application	RDH, RN, ARNP, PA	MH, CAH	911
Dental sealant application	RDH	MH, CAH	912
Silver diamine fluoride application	RDH	MH, CAH	913
Prophylaxis	RDH	MH, CAH	914
Radiograph	RDH	MH, CAH	914
Oral hygiene instruction	RDH, RN, ARNP, PA	MH, CAH	
Nutritional counseling for the control of dental disease	RDH, RN, ARNP, PA, RD	MH, CAH	
Tobacco counseling for the control of dental disease	RDH, RN, ARNP, PA	MH	
Interpretation services		MH, CAH	709

Providers Key: RDH - registered dental hygienist; RN - registered nurse; ARNP - advanced registered nurse practitioner; PA - physician assistant; RD – registered dietician

Oral Screenings: Either active or passive consent is required for oral screenings. ***Active consent*** is recommended for oral screenings; passive consent is allowable for an oral screening. Passive (or "opt-out") consent allows a service to be provided unless the parent/guardian has actively declined the service after being notified that the service will be provided. Contractors are responsible for assuring that all required documentation/information is obtained for the purposes of data entry into the Department MCAH Data System.

All other direct services: Active consent is required for fluoride varnish applications, sealant applications, silver diamine fluoride applications, prophylaxes, and radiographs. Active consent means that the client or parent/guardian of a minor (child under age 18 and unmarried) indicates consent for each service and signs and dates the program consent form. Standardized consent forms are available from OHDS staff. Contractors may develop consent forms based on the OHDS template, which must be approved by OHDS staff prior to using. Specific consent for use of silver diamine fluoride must be obtained from parents/guardians; forms are available from OHDS.

DRAFT 4-6-2022

Combined CAH/oral health or MH/oral health consent forms may be used. Specific oral health services offered by the contractor must be included on the combined consent forms. Contractors must assure that all information required on the oral health consent template is captured within the client medical record.

Signed consent forms are valid for one year. Contractors may accept a signed consent form that has been faxed or an electronic signature that has been sent via email. Verbal consent over the phone is not acceptable.

Contractors with questions about the necessity of obtaining consent, the person authorized to provide consent, or the adequacy of a consent form are encouraged to contact their agency or private legal counsel to obtain advice on such issues. Refer to Policies 302 and 304 of this manual for additional detail on client records and minor consent requirements.

Release of Confidential Information: Confidential information may not be shared without a *signed authorization for release,* unless otherwise specifically authorized by law. All paper and electronic client records that include information on the identity, assessment, diagnosis, prognosis and services provided to specific individuals or families are considered confidential information. See Policy 305 for additional information about confidentiality.

A separate release of information form and consent form are required for all oral health services provided. However, when direct dental services are provided in a school setting or any time a parent/guardian is not present, a combined consent/release of information form may be used. In this instance, two signatures must be obtained on the form – one for consent and one authorizing release of information.

The Department's Bureau of Oral and Health Delivery Systems provides templates for consent, release of information and screening forms that include minimum requirements. Contractors may develop agency-specific forms based on the OHDS template. Forms must be approved by the oral health consultant prior to use.

Documentation

Screening Form documentation must include:

- Name of client
- Date of birth
- Medicaid number, if applicable
- Date of service
- Place of service
- Medical and dental history
- Findings from the oral screening
- Dental codes/services provided
- Duration of service
- Oral health education provided, including with whom you spoke
- Products recommended or dispensed
- First and last name of provider and credentials
- Signature/signature log

Effective Date: 10-1-2016
Revision Date: 10-1-2022
Date of Last Review:
Authority: Iowa Code § 135.15, 641 IAC 50, Medicaid Screening Center Provider Manual

Overview
Tooth decay is one of the most common chronic conditions of childhood in the United States. Untreated tooth decay can cause pain and infections that may lead to problems with eating, speaking, playing, and learning.

Oral screenings of CAH clients can identify oral health anomalies or diseases, such as untreated tooth decay, gum disease, developmental problems, and trauma. Oral screening findings help to identify a client's risk level for future dental disease, using the I-Smile™ Risk Assessment. The risk assessment provides guidance for Contractors regarding the appropriate education, care coordination, and immediacy regarding referral to a dentist of each client screened.

Policy
Contractors must follow Department guidelines and procedures when providing oral screenings.

An I-Smile™ Decay Risk Assessment must be completed on each CAH client receiving an oral screening. The I-Smile™ risk assessment establishes a child's level of risk for tooth decay as low, moderate or high.

Screenings may be provided by Iowa-licensed dental hygienists, registered nurses, advanced registered nurse practitioners, or physician assistants.

Contractor staff who provide oral screenings must be trained by the CSA I-Smile™ Coordinator prior to providing the service. Documentation of the training of non-dental staff must be on file with the Bureau of Oral and Health Delivery Systems, using forms provided by the Department.

A referral to a dentist must be completed for all clients screened.

Procedure
Oral screenings may occur at locations where at-risk, low-income infants, children and adolescents may be found, such as WIC clinics, Head Start classrooms, preschools, daycares, and schools.

Dental explorers cannot be used to complete oral screenings. Visual assessment is sufficient. Using a dental explorer may transfer decay-causing bacteria from one tooth to another or cavitate a demineralized area. The only exception to this requirement is within I-Smile™ @ School; dental explorers are allowed but not required.

An oral screening includes a medical/dental history and an oral evaluation. For CAH clients, medical or dental history information that cannot be obtained through an interview with the parent or guardian should be collected through the (parent not present) consent form.

To complete an oral screening:

1. Review Client's Medical History: The medical history consists of:
    a. Name of child's primary care provider

DRAFT 4-6-2022

   b. Frequency of medical visits for a well-child/adolescent exam
   c. Immunizations up to date
   d. Current medications used (e.g. those with sugar or those that cause dry mouth, enlarged gingiva, or bleeding)
   e. Allergies
2. Review Client's Dental History: The dental history consists of:
   a. Name of child's dentist
   b. Current or recent oral health problems or injuries
   c. Parental concerns related to child's oral health
   d. Frequency of dental visits
   e. Home care (frequency of brushing, flossing or other oral hygiene practices)
   f. Feeding/snacking habits (exposure to sugar/carbohydrates)
   g. Use of fluoride by child (water source, use of fluoridated toothpaste or other fluoride products)
   h. Parent or sibling decay history
3. Evaluate Client's Soft Tissue
   a. Gum redness or bleeding
   b. Swelling or lumps
   c. Trauma or injury
4. Evaluate Client's Hard Tissue
   a. Suspected decay
   b. White spot lesions (demineralized areas) near the gumline
   c. Visible plaque
   d. Stained fissures of primary molars
   e. Enamel defects
   f. History of decay (presence of fillings or crowns)
   g. Trauma or injury

To complete the I-Smile™ Decay Risk Assessment, review the oral screening indicators listed in the first column of the risk assessment form. Assign the appropriate risk level according to the "highest" oral screening indicator identified (high, moderate, or low).

DRAFT 4-6-2022

Documentation:
The client chart must include documentation that the oral screening and risk assessment were provided, including the duration of each service. The services must also be entered in the Department's MCAH data system completing all required fields including the primary payer who is paying for the service. (e.g., Hawki, Title V, Title XIX - FFS, Title XIX PAHP - Delta Dental or MCNA)

Billing
When provided to Hawki or Medicaid-enrolled clients, the oral screening and risk assessment must be billed to the appropriate Medicaid Prepaid Ambulatory Health Plan (PAHP) or Iowa Medicaid (for those not enrolled with a dental plan). Use D0190 and D0601, D0602, or D0603 to bill.

DRAFT 4-6-2022

Overview

A healthy mouth is essential for a healthy pregnancy. Diet and hormonal changes that occur during pregnancy may increase a woman's risk for developing tooth decay and gum disease. Oral infections can affect the health of the mother and her baby. Contractors can have a positive impact on improving the health of maternal health (MH) clients and their babies by including risk assessments and oral screening services.

Oral screenings of MH clients can identify oral health anomalies or diseases, such as untreated tooth decay, gum disease, developmental problems, and trauma. Oral screening findings help to identify a client's risk level for future dental disease, using the Oral Health Risk Assessment for Maternal Health. The risk assessment provides guidance for Contractors regarding the appropriate education, care coordination, and immediacy regarding referral to a dentist of each client screened.

Policy

Contractors must follow Department guidelines and procedures when providing oral screenings.

An Oral Health Risk Assessment for Maternal Health must be completed on each MH client receiving an oral screening. The risk assessment establishes a person's level of risk for tooth decay and/or gum disease as low, moderate or high.

Screenings may be provided by Iowa-licensed dental hygienists, registered nurses, advanced registered nurse practitioners, or physician assistants.

Contractor staff who provide oral screenings must be trained by the CSA I-Smile™ Coordinator prior to providing the service. Documentation of the training of non-dental staff must be on file with the Bureau of Oral and Health Delivery Systems, using forms provided by the Department.

Contractors must refer all clients screened to a dentist.

Procedure

Oral screenings may occur at locations where at-risk, pregnant people may be found, such as WIC clinics.

Dental explorers cannot be used to complete oral screenings. Visual assessment is sufficient. Using a dental explorer may transfer decay-causing bacteria from one tooth to another or cavitate a demineralized area.

An oral screening includes a medical/dental history and an oral evaluation.

To complete an oral screening:

1. Review Client's Medical History: The medical history consists of:
    a. Name of primary care provider
    b. Frequency of medical visits

c. Pertinent medical conditions (e.g. pregnancy due date, prenatal care, nausea/vomiting, gestational diabetes, heart murmur)
d. Current medications used (e.g. those with sugar or those known to cause dry mouth, enlarged gingiva, or bleeding)
e. Allergies
f. Tobacco, alcohol or drug use

2. Review Dental History: The dental history consists of:
    a. Name of dentist
    b. Current or recent oral health problems or injuries
    c. Frequency of dental visits
    d. Home care (frequency of brushing, flossing or other oral hygiene practices)
    e. Feeding/snacking habits (exposure to sugar/carbohydrates)
    f. Fluoride use (water source, use of fluoridated toothpaste or other fluoride products)
3. Soft Tissue Evaluation: The soft tissue evaluation consists of:
    a. Gum redness, bleeding or exudate
    b. Swelling or lumps
    c. Trauma or injury
    d. Gingival recession
4. Hard Tissue Evaluation: The hard tissue evaluation consists of:
    a. Suspected decay
    b. White spot lesions (demineralized areas) near the gumline
    c. Visible plaque, calculus (tartar) or stain
    d. Enamel defects
    e. Decay history (presence of fillings or crowns)
    f. Trauma or injury
    g. Loose or missing teeth

To complete the Oral Health Risk Assessment for Maternal Health, review the oral screening indicators listed in the first column of the risk assessment form. Assign the appropriate risk level according to the “highest” oral screening indicator identified (high, moderate, or low).

See 905 regarding the Maternal Health “oral health only” client option.

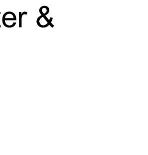
DRAFT 4-6-2022

Documentation:
The client chart must include documentation that the oral screening and risk assessment were provided, including the duration of each service. The services must also be entered in the Department’s MCAH data system completing all required fields including the primary payer who is paying for the service. (e.g., Hawki, Title V, Title XIX - FFS, Title XIX PAHP - Delta Dental or MCNA)

Billing
When provided to Hawki or Medicaid-enrolled clients, the oral screening and risk assessment must be billed to the appropriate Medicaid Prepaid Ambulatory Health Plan (PAHP) or Iowa Medicaid (for those not enrolled with a dental plan). Use D0190 and D0601, D0602, or D0603 to bill.

Note: Contractors that provide full prenatal care are required to include oral screening for their clients.

1. At least one screening must be completed during the prenatal visit schedule.
2. If a client has not seen a dentist following the initial screening, a second screening is required and can be completed postpartum, if needed.



Number: 910
Title: Dental Referrals
Billing Code(s):
Effective Date: 10-1-2016
Revision Date: 10-1-2022
Date of Last Review:
Authority: Iowa Code § 135.15, 641 IAC 50, Medicaid Provider Manuals (Screening Center & Maternal Health Center)

Policy
MH and CAH clients must be referred to a dentist for routine care and/or dental treatment.

Procedure
For clients contacted by mail, email, or phone, emphasize the importance of regular and routine dental care from a dentist and offer assistance with a referral.

For clients receiving an oral screening, use the appropriate (I-Smile™ or MH) risk assessment to determine the referral need.

1. CAH: Inform parent/guardian of the need for a dental exam within six months of an infant's first erupted tooth or by the age of one. Children of any age that are identified with an oral health problem, such as suspected decay, injury, pain, gum inflammation, or abscess, must be referred to a dentist for treatment.
2. MH: Inform MH clients of the importance of regular and routine dental care from a dentist. MH clients should visit a dentist at least once during pregnancy. An MH client identified with an oral health problem such as suspected decay, injury, pain, gum inflammation, or abscess, must be referred to a dentist for treatment.

Documentation
Document a dental referral in the MCAH data system and in a client's hard copy chart (when applicable).

DRAFT 4-6-2022

Number: 911
Title: Fluoride Varnish
Billing Code(s): D1206
Effective Date: 10-1-2016
Revision Date: 10-1-2022
Date of Last Review:
Authority: Iowa Code § 135.15, 641 IAC 50

DRAFT 4-6-2022

Overview

Fluoride varnish is a resin that when painted on teeth by a dental or other health care professional, protects the teeth from tooth decay. During application, the varnish forms a thin sticky layer on the tooth which hardens on contact with saliva. Fluoride is then absorbed into the enamel of the tooth. Fluoride varnish is not intended to adhere permanently; the varnish holds a high concentration of fluoride in a small amount of material in close contact with the teeth for many hours until it is brushed off. Varnishes must be reapplied at regular intervals with at least four applications per year for optimal effectiveness.

Fluoride varnish is highly effective in preventing decay and re-mineralizing white spot lesions. It is recommended for use on at-risk children as soon as teeth begin to erupt. It can also be highly effective for preventing tooth decay in pregnant people. The benefits of fluoride varnish make it extremely useful within public health programs. The absorption time is much longer than for traditional fluoride gels and foams. Application of fluoride varnish is recommended three to four times a year for MH and CAH clients. Because of the rapid hardening of the varnish and small amount used, the risk of ingestion and toxicity of fluoride varnish is extremely low, making it safe for very young children and pregnant people.

Policy

MH and CAH contractors will ensure application of fluoride varnish when possible for clients who receive an oral screening,

Fluoride varnish application is limited to use in conjunction with an oral screening and must be provided according to the Department's fluoride varnish protocol.

Fluoride varnish application must be documented in the MCAH Data System and the client record including the product used and fluoride concentration.

MH and CAH direct service staff must receive training from the I-Smile™ Coordinator prior to providing fluoride varnish applications for clients.

Procedure

Within the MCAH program, fluoride varnish may be applied by an Iowa-licensed dentist, licensed dental hygienist, licensed physician, registered nurse, advanced registered nurse practitioners, and/or physician assistant. Health care professionals must function within their scope of practice or licensure.

The criteria for application of fluoride varnish include any of the following:

- Presence of suspected tooth decay
- Presence of white spot lesions
- Presence of visible plaque
- History of decay (fillings or crowns)
- Low socio-economic status

To apply fluoride varnish:

1. Adhere to OHDS infection control guidelines.
2. Assemble supplies, including disposable 2x2 gauze sponges, fluoride varnish (single use dosage with applicator), a toothbrush (optional), and paper towels or disposable bib.
3. Wipe teeth with gauze to remove excess plaque or debris.
4. Eliminate excess saliva/moisture from the area using gauze. Work a quadrant at a time, for ease of maintaining a dry, isolated area.
5. Apply a thin layer of varnish to all surfaces of teeth, including the chewing and interproximal surfaces. Avoid applying on large, open decay where there may be pulpal involvement.

Following application, recommend that the client eat only soft foods for at least two hours, not drink hot liquids or use alcohol-based mouth rinses for at least six hours, not brush or floss for at least 4-6 hours, and wait until the following day for normal brushing and flossing.

Once varnish is applied, it will set quickly upon contact with saliva. Teeth may appear discolored temporarily until the varnish is brushed off.

Repeat fluoride varnish applications at 3-4 month intervals for moderate or high-risk clients and at 6-month intervals for low-risk clients.

Documentation:
The client chart must include documentation that the fluoride varnish was provided, including the product used, concentration, and duration of the service. The service must also be entered in the Department's MCAH data system completing all required fields including the primary payer who is paying for the service. (e.g., Hawki, Title V, Title XIX - FFS, Title XIX PAHP - Delta Dental or MCNA)

Billing
When provided to Hawki or Medicaid-enrolled clients, the fluoride varnish service must be billed to the appropriate Medicaid Prepaid Ambulatory Health Plan (PAHP) or Iowa Medicaid (for those not enrolled with a dental plan). Use D1206 to bill.

IDPH Fluoride Varnish Protocol

DRAFT 4-6-2022

Number: 912
Title: Dental Sealants
Billing Code(s): D1351
Effective Date: 10-1-2016
Revision Date: 10-1-2022
Date of Last Review:
Authority: Iowa Code § 135.15, Iowa Administrative Code 650 IAC 10, 641 IAC 50

Overview
A dental sealant is a resin that prevents tooth decay when applied to the chewing surface of posterior teeth. They are an important public health preventive service for low-income, uninsured and/or underinsured children and adolescents, particularly when placed on permanent molar teeth.

The teeth most at risk of decay, and therefore most in need of sealants, are the first and second permanent molars. For optimal prevention, the molars should be sealed as soon as possible after the teeth have sufficiently erupted, around ages 6-8 and 12-14 years. Permanent premolars may also benefit from sealants; application on those teeth can be determined on an individual basis. Although sealing primary molars is a Medicaid-billable service, this should be limited to children whose age and behavior will allow an optimal application procedure to ensure sealant retention.

Policy
CAH Contractors are encouraged to apply dental sealants to posterior teeth of age-appropriate clients. CAH Contractors are required to participate in the I-Smile™ @ School program, per eligibility guidelines, to apply dental sealants to posterior teeth of second and third graders in eligible schools. See Policy 903.

Iowa-licensed dentists and dental hygienists are allowed to apply dental sealants. Use of dental assistants is recommended. Dental assistants must be registered with the Iowa Dental Board. Registered nurses may also assist with application of sealants.

For I-Smile™ @ School, laypersons may help with documentation and/or transfer of students.

DRAFT 4-6-2022

Procedure
CAH clients must first have an exam from a dentist or an oral screening from a dentist or a dental hygienist to determine which teeth will benefit from the application of dental sealants. The hygienist's public health supervision agreement must include oral screenings to determine sealant application.

Based on the findings from the exam or screening, a dentist or dental hygienist may apply dental sealants. A dental hygienist must practice under public health supervision, with a collaborative agreement that includes sealant application. See policy 917.

Refer to Section 305.1 in the I-Smile @ School Program Manual for additional guidance.

Periodic retention checks are recommended for quality assurance, according to Department protocols.

Documentation:
The client chart must include documentation that the dental sealant(s) was provided, including the product used, tooth number(s), and duration of the service. The service must also be entered in the Department's MCAH data system completing all required fields including the

primary payer who is paying for the service (e.g., Hawki, Title V, Title XIX - FFS, Title XIX PAHP - Delta Dental or MCNA).

Billing
When provided to Hawki or Medicaid-enrolled clients, the dental sealant service must be billed to the appropriate Medicaid Prepaid Ambulatory Health Plan (PAHP) or Iowa Medicaid (for those not enrolled with a dental plan). Use D1351 to bill.

Iowa Administrative Code 650 IAC 10

DRAFT 4-6-2022

Number: 913
Title: Silver Diamine Fluoride
Billing Code(s): D1354
Effective Date: 10-1-2018
Revision Date: 10-1-2022
Date of Last Review:
Authority: Iowa Code § 135.15, 641 IAC 50

Overview
Silver diamine fluoride (SDF) is a topical treatment that can arrest some tooth decay and prevent future decay. It is particularly beneficial for at-risk children and adults seen in public health settings. SDF can stop the disease process, reducing the immediate need for restorative treatment that is sometimes difficult for families served by MCAH programs to obtain.

SDF **cannot** be used on pregnant or nursing women.

Policy
CAH Contractors are required to offer silver diamine fluoride (SDF) applications when appropriate for children with untreated tooth decay.

Within MCAH, only employed or contracted Iowa-licensed dental hygienists are allowed to apply SDF. Use of SDF must be included on a hygienist's public health supervision agreement, which requires both the hygienist and dentist to complete an Iowa Dental Board-approved training.

An oral screening must be provided prior to SDF application. If an area of tooth decay is identified that is appropriate for use of SDF, the hygienist must receive specific written (active) consent from the parent/guardian to apply the SDF.

If written consent for SDF is not possible on the day of a screening, SDF must be provided within 30 days of the documented screening. If the application cannot be done within 30 days, another fully documented screening must be completed prior to SDF application.

Application of SDF must be provided according to the Department's silver diamine fluoride protocol.

As part of an oral screening, when a hygienist identifies an area of tooth decay that is appropriate for use of SDF, the hygienist must seek additional consent from the parent/guardian to apply SDF to the carious lesion using the SDF (specific) consent form template developed by the Department.

DRAFT 4-6-2022

Procedure
The primary indications for use of silver diamine fluoride for a CAH client are to stabilize uncontrolled tooth decay for clients at moderate-high risk of experiencing new lesions and to treat decayed lesions for patients with limited or no access to restorative dental care.

To apply silver diamine fluoride:
1. Adhere to OHDS consent requirements and infection control guidelines.
2. Assemble supplies, including a tray, plastic-lined tray cover, plastic-lined patient bib, petroleum jelly, cotton-tipped applicator, 2x2 gauze sponges, silver diamine fluoride, disposable dappen dish, and microbrush applicator.

3. Wear gloves to open the bottle of SDF and place one drop in the dappen dish (one drop will treat up to five surfaces).
4. Clean the area where SDF will be applied, if needed. (toothbrushing is sufficient)
5. Use the cotton-tipped applicator to apply petroleum jelly to client's lips and soft tissue near the application site and dry teeth with 2x2 gauze.
6. Dip microbrush into the SDF, remove excess against the dappen dish.
7. Apply to a lesion for 2-3 minutes.
8. If it is not possible to maintain a dry field or keep the SDF in contact for 2-3 minutes, apply for at least one minute and then apply fluoride varnish over the area.
9. Rinse with water, if desired.
10. Gather all materials used and hold inside the palm of one gloved hand. Remove the glove, inside out, wrapping it around the materials and other glove. Dispose of in a garbage bag.

Avoid contacting SDF with gingiva, mucosa, skin, countertops, and clothing.

Use caution in areas of demineralization because it will darken if applied with SDF.
If using fluoride varnish for the client, apply SDF prior to fluoride varnish application.

Following application, recommend that the client not eat or drink for at least 30 minutes and not brush their teeth for at least one hour.

Remind client and/or parent/guardian that the treated area will increase in darkness over the next week and an examination from a dentist is needed. Complete the Department-provided information flyer to the parent/guardian to share with a dentist.

Repeat fluoride varnish applications at 3-4 month intervals for moderate or high-risk clients and at 6-month intervals for low-risk clients.

DRAFT 4-6-2022

Documentation

The client chart must include documentation that SDF was provided, including the product used, tooth number(s) and duration of the service. The service must also be entered in the Department's MCAH data system completing all required fields including the primary payer, who is paying for the service. (E.g., Hawki, Title V, Title XIX - FFS, Title XIX PHP - Delta Dental or MCNA)

Documentation must also include verification that the specific consent was obtained.

Billing

When provided to Hawki or Medicaid-enrolled clients, the SDF service must be billed to the appropriate Medicaid Prepaid Ambulatory Health Plan (PAHP) or Iowa Medicaid (for those not enrolled with a dental plan). Use D1354 to bill.

IDPH Silver Diamine Fluoride Protocol

Number: 914
Title: Prior Approval to Provide Prophylaxis and/or Radiographs
Billing Code(s): D1120, D1110, 0274, 0272, 0270
Effective Date: 10-1-2016
Revision Date: 10-1-2022
Date of Last Review:
Authority: Iowa Code § 135.15, Iowa Administrative Code 650 IAC 10, 641 IAC 50

Policy
Providing prophylaxis and/or radiograph services must be based on community needs assessment. Prior approval from the Department's Bureau of Oral and Health Delivery Services (OHDS) is required in order to offer and provide these services.

Periodontal assessment must be part of a prophylaxis service.

Due to the threat of bleeding associated with prophylaxis, a detailed medical history must be completed to evaluate a client's risk for bacterial endocarditis or other blood-related conditions. This would include, but not be limited to, a client who has a heart murmur, takes anticoagulant medications, or is immune-suppressed.

Radiographs and/or prophylaxes may only be provided by a dentist or a dental hygienist. Dental hygienists must work under public health supervision and the collaborative agreement must include the guidelines for prophylaxis services.

Contractors must have standing orders place with a dentist(s) who will receive and review radiographs.

DRAFT 4-6-2022

Procedure
Contact your oral health consultant within the Department to request prior approval to provide prophylaxis and/or radiograph services.

Documentation
The client chart must include documentation that the prophylaxis and/or radiograph(s) were provided, including the duration of the service(s). The service must also be entered in the Department's MCAH data system completing all required fields including the primary payer, who is paying for the service. (e.g., Hawki, Title V, Title XIX - FFS, Title XIX PAHP - Delta Dental or MCNA)

Billing
When provided to Hawki or Medicaid-enrolled clients, the prophylaxis and/or radiograph service must be billed to the appropriate Medicaid Prepaid Ambulatory Health Plan (PAHP) or Iowa Medicaid (for those not enrolled with a dental plan). Use code(s) D1120, D1110, 0274, 0272, 0270.

[Iowa Administrative Code 650 IAC 10]

Number: 915
Title: Medicaid/Hawki Billable Direct Dental Services
Billing Code(s): See below
Effective Date: 7-1-2021
Revision Date: 10-1-2022
Date of Last Review:
Authority: Iowa Code § 135.15, Iowa Administrative Code 441 IAC 84; 42 CFR 441, subpart B

Policy

MCAH Contractors must bill Hawki, Medicaid or the Prepaid Ambulatory Health Plans for direct dental services provided to Medicaid-enrolled clients.

MCAH Contractors must bill their actual cost for providing direct dental services. See Policy 503 for additional information about Cost Analysis.

The following table lists the Hawki and Medicaid-billable dental services. Those that are only allowable to be provided by dental hygienists are noted as such.

DRAFT 4-6-2022

Code and Service Description	Frequency
D0120 Periodic oral evaluation by a dentist.	Every 6 months
D0150 Initial oral evaluation by a dentist	1 time per patient; also allowed when provider has not seen patient within a 3-year period
D0190 Oral screening by a non-dentist.	Every 6 months
D0601 Caries risk assessment and documentation, with a finding of low risk by a dentist, dental hygienist or nurse	Every 6 months with screening/evaluation
D0602 Caries risk assessment and documentation, with a finding of moderate risk by a dentist, dental hygienist or nurse	Every 6 months with screening/evaluation
D0603 Caries risk assessment and documentation, with a finding of high risk by a dentist, dental hygienist or nurse	Every 6 months with screening/evaluation
D0270 Bitewing radiograph – single film (hygienist only)	1 time in 12-month period
D0272 Bitewing radiograph – two films (hygienist only)	1 time in 12-month period
D0274 Bitewing radiograph – four films (hygienist only)	1 time in a 12-month period
D1110 Prophylaxis, adult – age 13 and over (hygienist only)	Every 6 months
Code and Service Description	**Frequency**

D1120 Prophylaxis, child – age 12 and under (hygienist only)	Every 6 months
D1206 Topical application of fluoride varnish	4 times a year, at least 90 days apart
D1310 Nutritional counseling for the control and prevention of oral disease (may be provided by a dietitian)	Every 6 months
D1320 Tobacco counseling for the control and prevention of oral disease	Every 6 months
D1330 Oral hygiene instruction	Every 6 months
D1351 Sealant - per tooth (hygienist only) ● Permanent premolars, molars, and primary molars ● Children through 18 years of age or those with a physical or mental disability	Every 6 months
D1354 Interim caries arresting medicament application – per tooth (hygienist only) ● Conservative treatment of an active, non-symptomatic carious lesion by topical application of silver diamine fluoride without mechanical removal of sound tooth structure	Twice a year
D9990 Certified translation or sign-language services ● In-person interpretation ● Staff employed or contracted for interpretation	Once per day per client

Procedure
Use the Medicaid Eligibility Verification System (ELVS) to verify client eligibility for services. Reference the MCAH data system to determine if a service may be provided based on Medicaid/Hawki frequency requirements and the client's designated PAHP. Verification must be completed in the month of the service.

See Policy 907 for more information about direct dental services.

Follow the Contractor's established billing protocol.

DRAFT 4-6-2022

Number: 916
Title: School Dental Screening Requirement
Billing Code(s):
Effective Date: 10-1-2016
Revision Date: 10-1-2022
Date of Last Review:
Authority: Iowa Code § 135.17, Iowa Administrative Code 641 IAC 51

Overview
All children entering kindergarten and ninth grade in an Iowa public or accredited non-public elementary or high school must provide the school with proof of a dental screening using Department-approved forms.

The purpose of the dental screening requirement is to improve the oral health of Iowa's children. The dental screenings:

- Facilitate early detection and referral for treatment of dental disease;
- Reduce the incidence, impact and cost of dental disease;
- Inform parents and guardians of their children's dental problems;
- Encourage the establishment of effective oral health practices early in life;
- Promote the importance of oral health as an integral component of preparation for school and learning; and
- Contribute to statewide surveillance of oral health.

Policy
I-Smile™ Coordinators must assist schools, families, and local boards of health to assure compliance with the dental screening requirement, including annual audits.

Procedure
Local assistance by I-Smile™ Coordinators may include:

- Distributing dental screening certificates and information to schools and dental offices and at community outreach events;
- Ensuring provision of gap-filling dental screenings in schools and/or other public health settings for children who are unable to receive a screening from a dentist;
- Ensuring care coordination to help children receive a screening and/or restorative care from a dentist;
- Training non-dental health care professionals to provide screenings in compliance with program requirements;
- Working with schools and local board(s) of health to audit screening certificates; and
- Compiling local school screening data to share with local board(s) of health and other partners.

DRAFT 4-6-2022

Number: 917
Title: Supervision of Dental Hygienists Working in Public Health
Billing Code(s):
Effective Date: 10-1-2016
Revision Date: 10-1-2022
Date of Last Review:
Authority: Iowa Code § 135.15, Iowa Code § 153.15, Iowa Administrative Code 650 IAC 10

Policy
All Iowa-licensed dental hygienists employed or contracted by MCAH Contractors to provide direct dental services must have public health supervision from a dentist. This allows hygienists to provide services in public health settings without patients first being examined by a dentist. Hygienists may provide educational and program administrative services without supervision.

Procedure
To work under public health supervision, a dental hygienist must have an active Iowa license and a minimum of one year of clinical experience. A collaborative agreement between a dentist and hygienist is required, outlining the services that can be provided, locations where services will be provided, and standing orders for the services.

If a hygienist's public health supervision agreement includes use of silver diamine fluoride (SDF), both the hygienist and dentist must complete an Iowa Dental board-approved training prior to entering into the agreement.

The hygienist must submit a copy of the final, signed collaborative public health supervision agreement to the Department's Bureau of Oral and Health Delivery Systems (OHDS). Dental hygienists and their supervising dentist are responsible for reviewing the agreement biennially to assure that information is current. If updates are needed, a revised agreement must be sent to OHDS. An addendum may be requested from OHDS to add sites and/or services to the agreement on file.

Each dental hygienist who has rendered services under public health supervision must annually complete and file a report of services provided under public health supervision for a calendar year with OHDS. Each year, OHDS staff will provide instructions and a report form to be used to hygienists with active agreements on file.

Public health supervision agreements are required to include information about maintaining dental records of services provided by the hygienist and where the records are to be located. Because services will be provided as part of the MCAH program, records must be maintained by Contractors and not at different locations. See Policy 302, Client Records.

Dentists providing public health supervision for hygienists are not required to provide future dental treatment for patients served by a hygienist.

Resources
Detailed rules about dental hygiene services and supervision requirements may be found on the Iowa Dental Board website: http://www.dentalboard.iowa.gov/practitioners/hygienists/public-health-supervision.html.

A current template for public health supervision agreements may be found on the Department website: http://idph.iowa.gov/ohds/oral-health-center/resources.

DRAFT 4-6-2022

Number: 918
Title: Supervision of Dental Assistants Working in Public Health
Billing Code(s):
Effective Date: 10-1-2016
Revision Date: 10-1-2022
Date of Last Review:
Authority: Iowa Administrative Code 650 IAC 10, 650 IAC 20

Policy
All Iowa-registered dental assistants employed or contracted by MCAH Contractors providing intraoral and/or extraoral direct services must have public health supervision from a dentist. This allows assistants to provide services in designated public health settings. Assistants may provide care coordination and/or administrative services without supervision.

Procedure
A dental assistant must be registered in Iowa and have a minimum of one year of clinical practice experience to work under public health supervision of a dentist. A collaborative agreement between a dentist and assistant is required that includes the services that can be provided, where services will be provided, and standing orders for the services.

The dental assistant must submit a copy of the final, signed collaborative agreement to the Department's Bureau of Oral and Health Delivery Systems (OHDS) and the Iowa Dental Board. Each dental assistant and dentist are responsible for reviewing the agreement biennially to assure that information is current. If updates are needed, a revised agreement must be sent to OHDS and the Iowa Dental Board. An addendum may be requested from OHDS to add sites and/or services to the agreement on file.

Each dental assistant who has rendered services under public health supervision must annually complete and file a report of services provided under public health supervision for a calendar year with OHDS. A report of services provided under public health supervision for the calendar year must be filed at least annually with OHDS. Each year, OHDS staff will provide instructions and a report form to be used.

Resources
Detailed rules about public health supervision for dental assistants can be found in Iowa Administrative code:
https://www.legis.iowa.gov/law/administrativeRules/rules?agency=650&chapter=20&pubDate=08-03-2016.

A current template for public health supervision agreements may be found on the Department website: http://idph.iowa.gov/ohds/oral-health-center/resources.

DRAFT 4-6-2022

Number: 919
Title: Child Health: Dental Treatment Provided by Dentists
Billing Code(s):
Effective Date: 10-1-2016
Revision Date: 10-1-2022
Date of Last Review:
Authority: Iowa Code § 135.15, Iowa Administrative Code 641 IAC 76, 641 IAC 50, Social Security Act Title V Sec 506 [42 USC 706]

Policy
CH Dental funds may be used to reimburse dentists for a limited number of basic preventive and restorative dental services, at Medicaid approved rates, for CAH clients enrolled in Title V (vouchers). CH-Dental funding cannot be used to support direct care services provided within Federally Qualified Health Center (FQHC) dental clinics.

Contractors that use CH Dental funds to reimburse dentists for services must have a written agreement with those dentists.

Procedure
Client eligibility for Title V must be assessed. See Policy 106.

Agreements with dentists should include:

- A list of the reimbursable dental procedures and the reimbursement amounts for those procedures;
- If Contractor has determined a maximum amount that will be allowed per child per voucher, include the amount allowed unless prior authorization is received;
- Information on how a dental office may request an "exception" for procedures not currently on the list;
- Clarification that voucher reimbursement is accepted as payment in full and the patient/family is not responsible for additional costs; and
- I-Smile™ Coordinator contact information.

Contractors may create a "dental voucher" system to use for reimbursement of dental services for eligible clients. The voucher may be given to a family to provide a participating dental office, indicating that the Contractor will reimburse the dental office for allowable treatment costs (using CH Dental funds).

Each year, Contractors receive an updated list of pre-authorized codes and reimbursement levels from the Bureau of Oral and Health Delivery Systems (OHDS). Reimbursement rates are based on the most current Medicaid and/or Prepaid Ambulatory Health Plan (PAHP) fee schedule.

Payment protocols must be based on Medicaid guidelines. Refer to Medicaid's Dental Services Provider Manual.

CH Dental funds/dental vouchers cannot be used to pay for direct services provided within FQHC dental clinics.

OHDS staff may grant exceptions to use CH-Dental funds for services that are not on the pre-authorized list of codes. To request an exception, Contractors must complete the Department's *Title V Voucher Exception to Policy Request* form and submit to assigned OHDS consultant.

DRAFT 4-6-2022

The I-Smile™ Coordinator will be notified by OHDS staff of the final decision.

Documentation
For any client receiving care from a dentist that is reimbursed with CH-Dental funds, "dental voucher" must be indicated as a service for that client in the Department MCAH Data System. CAH Contractors must enter all voucher data into the MCAH data system by the 30th of the month following the end of each fiscal quarter (January 30, April 30, July 30 and October 30). The data includes: the number of children who saw a dentist using CH-Dental funds, the number of dental procedures provided by dentists and the total amount of treatment dollars reimbursed to dentists per quarter.
